I am looking for information about what one must do in order to be licensed to operate a ham radio. My father is coming back from Korea in about 6 months and I am trying to find a place in the Augusta, Georgia area for him to learn the basics. Any information would be greatly appreciated.

Vince,

Since I have seen this post three times I just can't ignore it even though I
wanted to. My first response was "Oh brother!" but now...

#1 What is your point? All these {hi}s just confuse the issue. I'm having
trouble telling what is toungue-in-cheek and what is your point. I just can't
believe a person would stretch the argument for pro-code to this extreme point
of being ludicrous.

#2 If this really is what you feel, are you a member of one of those lunatic militia groups hiding up in Montana that we here about on the evening news?

Jim

QST de W1AW
DX Bulletin 7 ARLD007
From ARRL Headquarters
Newington CT January 25, 1996
To all radio amateurs

SB DX ARL ARLD007
ARLD007 DX news

This week's bulletin was made possible with info provided by Bob, KK6EK, Peter, ON6TT, Chris, G4BUE, Joe, K8JP, Isao, JH1ROJ, Don, WB2DND, Tedd, KB8NW, the OPDX Bulletin and Contest Corral from QST. Thanks to all.

MYANMAR, XZ. XZ1A will be on the air during the CQ WW 160 Meter DX CW contest. OH1RY and OH1MA will sign XZ1R January 26 to February 3. OH1MA, OH1RY, OH0XX and OH2BH will be on the air February 20 to 28, as XZ1A or XZ1R.

VIETNAM, XV. JA3UB, JR3MVF and JH3GRE will be doing equipment and antenna maintenance at the club station in Ho-chi-minh City February 9 to 15. They will operate on 160 to 6 meters with SSB and CW as time allows. Call and QSL route TBA. XV1A checked into the 14226 DX Net at 1615z this past Sunday. Rolf, XV7SX, has been on 160 meters and plans regular visits to 1827 kHz around 2330z. He has been heard on 3505 kHz at 0000z.

NORTH KOREA, P5. Rumblings have started in the long anticipated 1996 P5 operation by OH2BH, OH0XX and possibly others sometime in February.

WAKE ISLAND, KH9. All signs are GO for AL7EL/KH9, slated for February 1 to 7. The new QSL route is via K4HQI.

HEARD ISLAND, VK0. The re-organized DXpedition is slated for early January 1997. Initial team members include EA8AFJ, HB9AHL, KA6W, K0IR, KK6EK, N6EK, NP4IW, ON6TT, PA3DUU and RA3AUU. Additional team members TBA.

SVALBARD, JW. Claude, F6EOZ, will be in Svalbard from March 3 until mid-May and sign either JW/F6EOZ/MM or JW/TM6E/MM. Claude will concentrate on 20 meters and satellite contacts.

MAURITIUS, 3B8. Peter, DK1RP, will visit 3B8CF on February 16 for a two week stay. He hopes to operate 80 through 10 meter CW and SSB. QSL via the DARC Bureau.

AMERICAN SAMOA, KH8, WESTERN SAMOA, 5W, TONGA, A3, AND HAWAII, KH6. Adriano, IK2GNW, will sign KH8/IK2GNW February 18 to 22, 5W1NW from February 23 to 25, A35NW from February 25 to 29 and KH6/IK2GNW March 1 to 3. He operates primarily SSB, but does do some CW and RTTY. Operations will be on 160 through 6 meters. Try 3800 kHz at 1630z. QSL via IK2GNW.

TONGA, A3. Paul, KK6H, will sign A35RK February 20 to March 20, mostly on CW and RTTY, though some SSB may be used. Operating time for this visit is limited, but check between 0500 and 0900z and again between 1700 and 1900z. This business trip is in preparation for relocating to Tonga in July. QSL via W7TSQ, direct or bureau. DO NOT send cards via KK6H, the W6 or A3 QSL Bureaus.

WESTERN MALAYSIA, 9M2. Tex, 9M2TO, will be in the CQ WW 160 Meter Contest. Listen for him around 1900 kHz.

TUNISIA, 3V. Frank, DL8HYR, plans to be on from 3V8BB March 1 to 10, mainly satellite and EME, but some lower HF band operations are possible. YT1AD will be QRV from 3V8BB during the CQ WPX SSB Contest.

ANDORRA, C3. Peter, VE3GEJ, will sign C31LJ. He will operate in the CQ WW 160 Meter contest providing snow and ice do not adversely affect the antenna system.

MADEIRA ISLANDS, CT3. Dick, G3PFS, should soon be QRV as CT3EU on 40 through 10 meters.

SAINT PIERRE AND MIQUELON, FP. FP5EK hopes to be active daily at 2200z on 3515 kHz. QSL via K1RH.

GLORIOSO ISLAND, FR. FR5ZQ/G has been heard on 14023 kHz at 1907 and 1933z.

JAN MAYEN, JX. JX9ZP operates mostly SSB from the meteorological station.

ANTARCTICA. OA0MP will be active January 25 to 31 from Palmer Archipelago.

GUERNSEY, GU. The Guernsey ARS will operate club station GU3HFN late evening/early morning January 27 and 28 in the CQ WW 160 Meter CW contest. QSL via the bureau or direct to Guernsey ARS, PO Box 100, Guernsey GY1 3EL, via United Kingdom.

TURKS AND CAICOS ISLANDS, VP5. Joe, K8JP, will sign VP5/K8JP February 11 to 19, mostly CW on the low bands and 30, 17 and 12 meters. He also hopes to sign VP5JP in the ARRL DX CW Contest. QSL to Joe Pontek, PO Box 59573, Schaumburg, IL 60159-0573. Koji, JJ2QEH, and Mack, JJ2QXI, will operate from the shack of VP5JM,

probably with individual call signs, from February 3 to 9. QSL to their home calls direct or via the JA bureau.

THIS WEEKEND ON THE RADIO. If you don't have a string of Super Bowl parties to attend this weekend, try the CQ WW 160 Meter DX CW, REF French CW and/or UBA Phone contests. For more information on these radio events, see pages 105 and 106 in January QST.

I've been on the verge of creating alt.radio.amateur.flame for quite
a long time. The problem, most folks that should use a group like
that either are (a) too ignorant or (b) too arrogant and therefore
the group wouldn't get used.

I, too, am fairly active in contests - both here in the US and overseas. I reply to all QSLs I receive, and almost immediately to those considerate enough to send an SASE. Anything else goes via the bureau, but it does go. I must say I'm a tad aghast at the attitude reflected by at least one post in this thread in which the writer claims to dabble in contests but shows nothing but disdain for QSLs. If he does receive a card with an SASE, what does he do -- use the stamp to pay his gas bill? That is not the way decent hams should behave, although it may be a bit more common than I would have hoped. Sign of the times, maybe?

1316. Homodyne detection - how does it work?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-25 00:00:00 UTC
From: mpolakow@tech.iupui.edu
Message-ID: <4e84m7$bgg@aim.et.iupui.edu>
Source record: 231727

As I understand it, homodyne detection consists of mixing
a modulated signal with itself. However, if I have two
versions of a signal that differ only in phase:

f1(t) = a(t)*cos(wct+p1)
f2(t) = a(t)*cos(wct+p2)

the product (after a LPF) is:

a^2(t)*cos(p1-p2)

My question is: how is the envelope recovered; i.e., how
do I get back a(t) once it has been squared? Or is it
even possible? Any help would be appreciated.

- Mike

: After reading a post from one contestor that he never replies
: to QSLs for contest QSOs, I would be curious about the habits
: of other US contesters. Do you respond to QSLs for contest QSOs?
: (I understand the special circumstances of DX stations, I'm
: just asking about US contesters here.)

As long as I get a SASE, I always reply. In fact, the QSL usually goes
out the same day it's received. QSL's received without a SASE go in the
garbage can. I'm talking about cards rcvd from US stations here.

DX QSL's get returned via the bureau, unless they are rcvd direct with
return postage.

: Is this the typical viewpoint of US contesters today?
: Or is it an exception?

I think it's the exception. In fact one very active station that I
regularly operate DX contests from QSL's all unique band/QSO's after every
contest, through the bureau.

I thought the term homodyne referred to direct conversion, IOW
mixing the wanted signal with a local oscillator at the same
frequency.

DIGITAL JOURNAL WW DIGITAL WPX CONTEST PART 1
10-11 FEBRUARY, 1996

FROM 0000 UTC SATURDAY TO 2400 UTC SUNDAY (48 HOURS)

CONTEST PERIOD

FOR SINGLE OPERATOR AND MULTI-SINGLE ONLY 30 HOURS OF THE 48
HOUR CONTEST PERIOD ARE PERMITTED. OFF PERIODS MUST BE A
MINIMUM OF 60 MINUTES IN LENGTH AND CLEARLY MARKED IN THE LOG.
MULTI-MULTI STATIONS MAY OPERATE THE FULL 48 HOURS.

OBJECTIVE

THE OBJECT OF THE CONTEST IS FOR AMATEURS AROUND THE WORLD TO
CONTACT AS MANY AMATEURS IN OTHER PARTS OF THE WORLD AS
POSSIBLE DURING THE CONTEST PERIOD USING A DIGITAL MODE. RTTY,
AMTOR, PACTOR, G-TOR, AND CLOVER MODES ARE ALL ENCOURAGED. THE
MOST COMMON MODE IS RTTY.

BANDS

THE 3,5,7,14,21,28 mhZ BANDS MAY BE USED.
NO WARC BANDS.

NOTES OF INTEREST:

Mount Athos, SV/A. The DXAC will be looking into a vote on the possible deletion or withdrawal of Mount Athos as a DXCC country in February.

Dominican Republic, HI8. From Juan Dolio, 16 January to 6 February, Berthold, will be signing DF5WA/HI8. He will be on all bands. CW/SSB and RTTY. QSL home call.

THE VK2SG RTTY DXNOTES are also available on Internet at reflectors dx@ve7tcp.ampr.org, and digital-dx@st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/~jukka/webcluster.html
THE VK2SG RTTY DXNOTES are also available on Internet at reflectors dx@ve7tcp.ampr.org, and digital-dx@st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/~jukka/webcluster.html

For next week's bulletin send your bandpass to Jules, W2JGR, at W5KSI.#NLA.LA.USA.NA

REMEMBER, DX DON'T SLEEP.
GL DE BOB, WB2CJL AT W5KSI.#NLA.LA.USA.NA

ARLD003 DX news

MONACO, 3A. Laura-Marcelle, 3A2MD, is on 14175 to 14180 kHz between 1400 and 1600z daily. QSL via Laura-Marcelle Martinez, 73 Bd du Jardin Exotique, 98000 Monaco.

GHANA, 9G. Steve, PA3GBQ, is now signing 9G5BQ on all bands. Check 3515 kHz at 0240z and 7010 kHz at 0115z. QSL via PA3GBQ.

ZAMBIA, 9J. Brian, 9J2BO, is very active on all bands. Try 3505 kHz at 0415z and 10103 kHz at 0520z. His new QSL route is via Brian Otter, PO Box 34554, Lusaka, Zambia.

VIETNAM, XV. Rolf, XV7SW, now has 160 and 80 meter inverted L antennas. An inverted vee for 40 meters will be installed soon. His downtown Hanoi QTH is noisy, so separate receiving antennas may be necessary. Rolf runs 100 watts on 160 meters and his license restricts him to specific frequencies. Try him on 1827, 3505, 7013, 14016, 14021, 21016, 21019, 28016 and 28019 kHz. QSL direct to Rolf T Salme, Embassy of Sweden, Box 9, Hanoi, Vietnam, or to his QSL Manager SM3CXS.

MIDWAY ISLAND, KH4. Bill, NH6D, returns January 15 for a 2 week stay to operate 160, 80 and 40 meter CW and SSB. QSL via KL7H/W6. Another DXpedition to Midway is planned for March, as an all-band, all-mode operation involving a large group of mainly US amateurs. More details, including QSL route, TBA later.

CENTRAL KIRIBATI, T31. T30DP is in Kanton on business for a few weeks. Listen for T30DP/T31 on 20 meters only, though he was recently on 7012 kHz at 1300z. QSL via VK4CRR.

WEST MALAYSIA, 9M2. Tex, 9M2TO, is active from Panang Island and enjoys CW. Check 7007/7027 kHz from 1400 and 1500z, 10102 kHz from 1300 to 1400z and on weekends try 18070 kHz from 0800 to 1000z. QSL via JA0DMV or direct to Tex Izumo, Bukit Dumbar Apr. 9-4, 97 Jalang Thomas 11700, Gelugore, Malaysia.

CAMBODIA, XU. Mike, VS6WV, should be here as this bulletin goes to press. Suggested frequencies are 7007 QSX up 2 to 4 kHz, 3511 or 3517 QSX up 2 to 4 kHz and 1823.5 or 1829 to 1831 kHz QSX up. QSL requests should continue to go to Mike Vestal, Box 2011, GPO, Hong Kong.

1323. Looking for OLD callsign info

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-25 00:00:00 UTC
From: frank@newshost.dsea.com
Message-ID: <4e8sni$dnt@server.eng.dsea.com>
Source record: 231734

I am in search of the call sign of my long-mising
uncle, Alan Mccormack. I was told that somebody
on this newsgroup might be able to find his call sign
by looking in an old log book.

I have checked all the obvious records and search
engines.

If you have the time, please look in a circa 1960 book
for WA???? of Wilmington, MA, having a name like
"Alan McCormack". Thanks for your time.

Also, does anybody have a good reference for the US
Military term "MARS Radio". Thanks again.

Email, please. My newsfeed does not always contain r.r.a.m

Haven't seen that particular model, but they are known for making
junk. The synthesized FM transceivers are poorly designed, unreliable
and generate spurs and other junk. Their PA-10 2-meter class C amp
has no output filtering.

They also sell a wireless FM microphone kit complete with crystal for
144 MHz.

I suggest dealing with a reputable company.

73..Jim N2VNO

Last week or so I read a post from the league that mentioned that part of our
allocation near 70 Ghz was to be reallocated in order to use for vehicular
collision avoidance systems. I think that this may actually be a boon for
us. Soon after it's deployment, cheap 70Gig Gunn heads will
be available, and I bet they'll be easy to move to our allocation.
WBFM at 70Ghz will be as easy to do by then as it is at 10 now.

Comments?

Vince Fiscus, KB7ADL (vfiscus@mcn.net) wrote:
: The main reason to keep the code is for a situation that I hope never happens,
: but it could happen. And that reason is a complete National disaster. We
: have never had a disaster that has affected the entire country at once. WE
: have had hurricanes here, earthquakes there, and some flooding all around, but
: never a nation wide emergency. A Nuclear war is one emergency that would
: affect the whole country. And in a Nuclear war, sensitive electronic circuits
: as found in our radio's and computers would be Zapped, making that equipment
: useless. Now the key to restoring order after a disaster is communications.
: And as a Ham, you have agreed to help out. (see part 97) Now you have to find
: a radio that survived the disaster, perhaps you will have to build one. The
: simpliest transmitter to build is one that sends a CW signal, only need a few
: parts to do it. You can use a wire for an antenna. It really wouldn't do any
: good to build a Cw transmitter though, if you didn't know the code.

If OOK Morse is all we would have to communicate with, I don't see
the prospects as good. OOK does not have any advantage in a nuclear war
environment then any other normal digital mode. The noise will be very harsh
and have non-linear distortions. You'll either need a lot of coding gain
on a forgiving modulation or one type od Spread Spectrum (sorry, I can't find
my notes from class on nuclear war's effects on communications. This is all
from memory), or both. As hams, maybe we should set up a more robust
emergency communications backbone for disasters in general.
As far as ICs go, today they are getting mighty forgiving of EMP
and other nuclear effects. I would not be suprised to see more computers
survive then solid state HF gear. Granted the stuff isn't RADHARD, but
you wouldn't survive that type of abuse either.

john adams <adams@ds5200.gradyn.co.uk> wrote:
>Always thought it stood for SEEK YOU

I think you're trying to attach an English meaning to the letters rather than attaching the letters to something in English. As an early landline or radio telegrapher looking to invent a group call, would the phrase SEEK YOU even enter into your thoughts? And if it did, wouldn't you use CU, or SU? Both have fewer elements than CQ and thus, can be sent faster. Why not invent the groups call ALL STATIONS and use the prosign AS? That's very distinctive. (Remember, you're inventing the first pro-signs so AS doesn't mean WAIT.)

I think we'll find many (most?) of our prosigns had their origin on the landlines. I sure wish I could confirm this, though. Maybe someone could check into the American Morse net (or dial up into the national landline net with your key, modem, and sounder) and get some definitive answers!

Perhaps I didn't make myself clear. I'm suggesting to the guy who says
he ignores ALL QSL requests that he should at least respond to the ones

that send SASE's...I think it is VERY discourteous not to respond when the QSL'er has even paid the return postage.

My PERSONAL practice is different, however: I respond to all QSL requests, ASAP if accompanied by an SASE, when I have time if no SASE or via the bureau. To further illustrate the point, when I went to Belize for the 1995 ARRL DX contest, QSL's were sent for ALL 4200 contacts via the bureau, whether QSL's were requested or not. A number of other contesters do the same.

I'm just trying to suggest a reasonable compromise for the folks who say they can't be bothered. Personally I have always responded to all QSL requests and plan to continue doing so.

73 - Alan NS0B/V31EV

PS- I'll be happy to work (and QSL) you from V31 in the upcoming ARRL DX CW contest!

>Who needs CW when we've got satellites?
> Bruce

Apparently Bruce is not particularly familiar with satellite operation.

The noise floor of the AO-10 and AO-13 satellites is such that with SSB
and reasonable power levels, typical signal/noise of 10-13 dB is about all
one can expect in good conditions, using a fairly large antenna system
such as a pair of 20 foot long circularly polarized yagi antennas feeding
a low noise amplifier at the antennas.

With this performance, it is far easier to use CW than spend lots more
money on a system capable of marginal voice capabilities. With CW, a
10 dB s/n signal is quite readable, and a narrow filter can improve the
s/n of the received signal substantially, as the common 400 Hz filter
will push it up by over 7 dB.

The rapid doppler shift of the low altitude satellites makes CW a much
easier mode to track than SSB. Doppler can move the signals by up to 6
kHz during a 15 - 16 minute pass. In this case, many operators consider
it easier to listen to a varying tone of Morse than it is to re-tune constantly
and often lose first part of the transmission from the other end due to
mis-tuning.

>(I understand the special circumstances of DX stations, I'm
>just asking about US contesters here.)

Yes, I reply to every one. Though I'm popular with the WAS and WPX chasers I don't find the burden to be excessive. Then again, I am not a Big Gun and don't work that many other little pistol types, who are usually the QSLers.

I do wish more people would enclose a SASE or at least a 20 cent stamp and mailing label. It used to be that almost every QSL I got had that. Not so any more.

Now, this only applies to direct QSLs. Some of the DX cards I get via the bureau that are obviously computer-generated mass mailings for every QSO in their log don't get answered. I also don't answer stateside QSLs that come through the DX bureau.

Propagation Forecast Bulletin 4 ARLP004
From Tad Cook, KT7H
Seattle, WA January 26, 1996
To all radio amateurs

SB PROP ARL ARLP004
ARLP004 Propagation de KT7H

Solar activity is still quite low, and only slightly higher than the week before. There were three days of no visible spots, and on every day the solar flux was below the average for the previous 90 days. The most active geomagnetic day was January 20, when the A index was 12 and the K index went briefly to 5.

Over the next week watch for the solar flux to rise above 80 around the end of the month, and then drop down to 70 after February 8. There is a chance of slightly disturbed conditions around February 9 or 10. When the flux rises above 80 there is a chance of better propagation on the higher bands.

A note from K6ZMW points out that while low solar activity is bad for the higher frequencies, this is actually a great time for 80 and 160 meters, especially when the A and K indices point to stable conditions. The hours before local sunrise are a good time to check 160 meters.

Websurfing propagation fans will want to visit Cary Oler's site, http://holly.cc.uleth.ca/solar/. The author of this bulletin can be reached on the internet at tadssc.com, or via packet radio at KT7H @ N7DUO.#WWA.WA.US.NOAM.

Sunspot Numbers for January 18 through 24 were 11, 0, 0, 14, 13, 0 and 11, with a mean of 7. 10.7 cm flux was 71, 70.8, 71.4, 71.8, 72.3, 73.3 and 73, with a mean of 71.9.

SB QST ARL ARLB007
ARLB007 FCC changes hearing date

The FCC has changed the date of its en banc hearing on spectrum
policy and management to March 5, 1996, and the ARRL hopes to
participate. The original hearing date of January 31 had to be
rescheduled because of the Federal furloughs triggered by the
congressional budget deadlock and heavy snow which extended the
shutdown.

The FCC will hear oral presentations and ''allow a direct exchange of
viewpoints'' among individuals and representatives of affected
industries. The commission will select panelists from among those
who have submitted letters of interest. Panelists will address
future spectrum demand and user needs, trends in technology, and
approaches to spectrum allocation and assignment, including
licensing and uses.

You know, considering the destruction of our forests by the paper companies, perhaps it is time to abandon books and switch to electronic text. We almost have the laptop and PDA technology to make it practical, and CDROMs have sufficient storage.

I don't know that the economics and infrastructure are here yet to just use the web to replace books, but it already has a shot at replacing the daily newspaper (for those who don't already get all their news from TV). Of course it's hard to wrap fish with a web page. I browse the Nando Times and CNN Interactive, and even get Dilbert on the web. Frankly that's a faster, cheaper, and more accurate source of news than the Atlanta Journal Constitution (lying rag that it is).

All we need now is to get something like the Ricochet Network spread nationwide so that wireless access is both fast and cheap. Then we can read anywhere, just as we do with books, magazines, and newspapers.

Hi John,
Gary raises some valid safety concerns that I agree with, but I don't think you need to consider anything that high(2000'). A half wave at 160 meters guesstimates out to about 270'. With a proper counterpoise you could probably get by with a 1/4 wave (135'). I don't know where your located, but here in Wisconsin it gets reasonably calm after sundown which is when the 160 meter band would be coming alive. Although, above 500' anything goes night or day as far as wind. In other words, if you keep your balloon below 500' you shouldn't have any wind problems after dark.

I'm not sure how much height the FAA will allow you. A quick call to the local flight service station might get you some clarification. A tower need not be lighted if its under 200'. They might allow you more on a one time notification basis.

My Field day partner and I considered a balloon based vertical for 80 meters. We had kind of decided to use a 1/2 wave with 1/2 wave on the ground for a counterpoise. We thought we might get some directivity by moving the counterpoise. We also thought we'd feed it with coax terminated in clips so we could adjust the length of it on the fly. Again, keeping it below 200' should avoid any hassle with FAA rules providing your far enough away from your local airport.

A group of hams in southern Wisconsin has been launching balloons with small repeaters and ATV for several years. I'll try to get you a callsign of somebody envolved.

True again, but what about reading your morning paper on the subway, bus, or
the like?

>All we need now is to get something like the Ricochet Network
>spread nationwide so that wireless access is both fast and cheap.
>Then we can read anywhere, just as we do with books, magazines,
>and newspapers.

Only if you want to lug around yoyr laptop. Lets face it, there are still
applications were books are better than "electronic media". When I go out
on field day, its sure a heck of a lot easier to throw my callbook in the
back seat, than it is to tear down my multi-media machine (monitor, keyboard,
ect.) just to run the CD callserver. (and/or load 80 meg of data to your
laptop...if you have one...and if you have the hard disk space too) :)

And if I decide to go fishing, I could tear out on of the Califorinia pages.
Sure wouldnt want to fold up a catfish in my Winbook...yuck! :)

Take care.

1354. QSL etiquette (see Feb 1996 QST)

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-26 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <4eaun4$kd6@cville-srv.wam.umd.edu>
Source record: 231606

QSLs ARE "the final courtesy of a QSO." They confirm contact and
some people collect them, either as proof of contact, wallpaper,
or whatever reason they have.

OK, so we've now gotten to the point where some consider them
JUNK MAIL if they weren't asked for.

J. Amateur, new ham, age 14:

LOOK, I thought enought of OUR contact (note, it takes TWO)
to spend the time, money, and effort to send you a card in hopes
you'd have the courtesy to send one back. Let's say we worked
in a contest and I JUST realized you were in Podunk county in
the imaginary state of Dyslexia, and I was born there, and was
a relatively new ham, and that card would be really cool to have.

You may be busy, but hey, I'm only 14, and this contact was important
to me. And 14 year-olds CERTAINLY don't have as much money as thee.
But they ALSO don't often think someone will be so arrogant so as
to consider a QSL card "junk mail." And they don't think about SASEs
unless YOU tell them to.

Back to the real poster...

So basically, if you don't want unsolicited QSLs, don't get on the
air. If you want SASEs, send a few back with "Please, next time,
send an SASE," and the "offenders" will learn about high-volume
operators and how they operate. I did.

I once worked a ham in Montana during a contest, and I needed the
card for WAS. I sent an SASE (had learned my lesson) and received
a reply within about a month. The callsign was NK3I, but I'm NF3I.

I sent the card, with a note, back to the sender, asking if he'd
send me a corrected card with the right callsign so i could get the
award.

I never got a reply, and I never got the envelope returned.

Most people are good about it; most hams understand that QSLing is
an important (and expensive) part of an otherwise expensive hobby.
But what folks forget is that it's a two-way street, and that the
requestor really DOES want your card for something. Something
to be proud of on that bragging wall, maybe an award or two.

And YOU are a part of it by just being on the air. Finish what you
start.

After 2 years at my mountain-top ranch I finally got around to stringing
up a rhombic. I had visions of dx stations pegging the meter.
I turned on the xcvr and I had a constant S-9 noise level on 80-15 mtrs.

First thing I did was power down the house at the mains to make sure it
wasn't me causing the QRN. Nope - clean.

I took a SWL portable around and checked all the poles - anytime I was
near one the QRN got worse.

I called SDG&E and after being bounced around a few times (at least in
the right direction) I talked with a guy who specializes in

"interference to ham radio receivers from power lines".

REALLY!

He took the info and told me he'd call me back in a week.

Yeah, Un-huh.

Friday he left a note on my answering machine saying he has an order in for
13 poles to be reworked, and if things aren't better in a couple of weeks
to let him know.

That night the QRN was S-5. A few nights later It was at S-3. Last night
(about 2 weeks since he called) the only QRN is from the electrons dancing
on a 1/2 mile of wire!

The power company really came to the rescue. Give 'em a try.

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at http://www.csz.com/sarrio.html. This new classified page will allow Hams to find equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear you'er interested in, you are also provided with easy point-and-click e-mail access, directly to the Ham that listed the item.

For those Hams with gear to sell, take note! there is NO charge to list your equipment within Ham Classifieds, and there will be no posting time delays. Your posting(s) will go on-line in our classified search engine immediately. All you need do is fill out a simple forms page, and upon its (point-and-click) submission your "For Sale" classified is immediately on-line.

```
I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.
```

Give it a try, and let me know how you like it (we are still beta testing)
73's Ray

1357. Is licensing for me?

Newsgroup: rec.radio.amateur.misc

I'm interested in building R/C airplanes, however I don't want to use commercial radio gear. I would like to build (or modify) a single channel transmitter to use a digital data stream and interface it to a PIC microcontroller in the plane. It was recommended on the rec.models.rc.air that I become ham licensed in order to further this project. Is that a good recommendation?

I'm not really interested in learning Morse, although the 5WPM requirment looks like it shouldn't be a major stumbling block. I'm also (currently) not really interested in talking to other people, I get plenty of that at work and on Usenet, I'm after a hobby that justifies my very valuable alone time. (Justifies to me anyway, I don't have an SO or children so my time is my time.)

As far as transmitters go I would be dealing with fairly low power levels, if the aircraft can pick it up around half of a mile I would be happy. I have a decent electronics background although I would need to learn a bit about radio transmissions.

So would a low-level license be appropriate for what I want to do or would I be abusing it by using it in this manner? If it would what type of license would I need?

Thanks for your help.

Roger

(It looks like spread-spectrum is currently out also. :(I was thinking about using it to build a wireless scoring box for fencing, normal methods don't work because they are too easy to block signals from the sidelines.)

You're right, the 5 WPM code is not a big challenge. But, you don't need it for access to the 6 meter band (50 MHz). You can get on that band with a No Code Technician license. Best of luck,

Tom Mosher, AB7NV Salem, OR

You should qsl when asked, for you may never know when you may be in need. A QSL is nothing more than a conformation of a contact. Brian, QSL cards need not be expensive. There are many options, you can use the net for example to qsl a contact. You can use packet radio for qsl'ing too. I have one on a napkin. I got a long distance (125 mile) contact on the 440 band. When I met up with this ham I asked for a qsl card. He simply wrote one out on his napkin and that is considered a qsl card.

Now Brian, when you tell your non-ham friends that you worked Germany on the radio you would have proof. I have told hams before to put your card where your mouth is or shut-up and stop wasting my time.

As I noted earlier, I don't originate QSLs, but if you're trying for an award, I will scrawl "confirmed" across a card you send me and drop it in the supplied SASE so that *you* can get your award. I'm not trying for awards, so your card is of no value to me, and I don't feel obligated to have cards printed, or to pay postage to send them out. Getting awards can be expensive, but amateur radio need not be.

On another note, I've received a number of cards recently "confirming" contacts with KE4ZV on HF voice. Those contacts are bogus. My only recent HF operations have been digital. I started out writing a letter to each of the people sending me cards, but gave up when the volume became too large. Slim has really been active, I could get an award. :-(Anyway, I will write VOID across your card and drop it in your SASE if you include one, otherwise the cards go in file 13.

PDAs like the Newton, and a wireless modem like those used by the
Ricochet network, can let you access an online callbook server from
anywhere (within the network's reach at least). When the network
coverage expands, this offers a very good substitute for a bulky
laptop and CDROM player. Better PDAs than the Newton are coming on
market too. Soon we'll have color 8.5x11 LCD displays on machines
no thicker (or heavier) than a copy of Byte Magazine. This will

be a real omni-book, or omni-newspaper, or omni-computing resource thanks to the distributed power of the network.

I once hoped amateur packet radio would lead the way in this direction, but it seems most amateurs lack the imagination to see the possibilities, and the will to make them happen. Fortunately, others outside amateur radio haven't lost vision or will, and such things are coming on market now.

It's not necessary to BS on the air with other folks to be an amateur, though of course lots of amateurs do it. Experimentation and building are integral parts of the amateur charter. Your projects would fit in fine.

>As far as transmitters go I would be dealing with fairly low power levels,

You need a Technician license, there's no Morse test. Most RC control by amateurs is done on the 6 meter band (50-54 MHz). A Tech has full privileges there. A 1 watt transmitter should do nicely for what you want.

>(It looks like spread-spectrum is currently out also. :(I was thinking
> about using it to build a wireless scoring box for fencing, normal

> the sidelines.)

SS can be used on the 70cm and above bands, also accessable with the Tech license. This looks like a good project, though getting SS equipment bulk down to where it's practical for fencers to wear could be a challenge. But since you're already a modeler, you're probably accustomed to working

in miniature, so SMD work should be right down your alley.

Hello,

I hope this isn't a waste of your time, but.....

I am thinking of purchasing my first 2-meter radio. In shopping for a unit I don't understand all of the features. Any help would be appreciated on the following terms and how they relate to a low-to-mid range radio.

CTCSS Encoding and Decoding

Front end interference rejection

SSB (I assume means "single side band") as apposed to what?

SWR (I assume means "standing wave ratio") what does this tell me about antennas?

Any info can be posted to this news group or emailed to me at: chuck@aeroastro.com

Thanks in advance.

Don't count on any sites carrying those alt groups. Here at UH we're
already max'd out at some 10,000 groups.

I guess throwing up a new repeater that duplicate coverage 10-fold isn't
enough to feed one's ego anymore - now one has to resort to creating
alt newsgroups... (Watch that blood pressure!)

>
(snip snip)

I can empathize with both points of view. I too am a busy person (practicing physician with 5 children, 3 of them under the age of 2!) who does most of his operating in contests. I don't like answering QSL's any more than the next guy, and I suspect I probably have even less time for it than the ham who wrote the above.

OTOH, I have sent many QSL requests, WITH SASE, which were never responded to in any way. I seriously doubt if they threw my stamps away! If the contester doesn't have time to respond he should at least acknowledge the requests which included an SASE, by returning the QSL if nothing else. It will cost the contester nothing but a (small) part of his time. Actually the amount of time needed to properly respond to a QSL request is not as much as might be thought. Most contesters anymore do computer logging, and finding/verifying a contact takes very little time. I keep ascii files of all my logs on my hard drive, and using a program like Vern Buerg's LIST allows me to search for a text string (i.e. the requester's callsign) in a split second. I think a more reasonable approach than the one proposed above is to answer the ones which are properly submitted (with SASE) and ignore the rest. If the requester wants it bad enough, he'll send again with an SASE.

Many of the "little guns" in contests are people who are there because they are chasing some award. That's how I got started in contesting. Very few people operating in contests have the time and equipment to be truly competitive. If all contesters had the attitude displayed above, most of the little guys would go away and the big guns would just have themselves to talk to. I think a more balanced approach is indicated here.

Flame away, the asbestos suit is on! 73 - Alan

1370. Read if dealing with Peter Short, KD6DKD, Grass Valley, CA

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-26 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <4e99ps$9m4@cville-srv.wam.umd.edu>
Source record: 231750
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,misc.forsale.non-computer

I am not condemning this person, just telling a story. Make your
own conclusions...

I'd put up for sale a Radio Shack HTX-100 and we haggled and arrived
at a price that included COD shipping. I sent the radio at my expense
via UPS to his address in Grass Valley, CA, on 11/13/95.

Delivery was attemped three times starting on 11/21, and the box was
summarily returned to me. He never returned my calls (I always had to
call back if I wanted to ask him anything), but did indicate that "kids
take the slips off doors, his neighbors did see a slip but he never
got it, and they were away during those days."

So did he just "forget" that it was coming???

He apologized and asked me to send it again, COD, for $15 more than
before (stupid me), covering my loss. I stupidly said yes.

I sent it out on 12/7 via UPS ground again, at a cost of ~$15 to me.

On or around Christmas Day, I called him and he indicated it was received
and all was well. On 1/10/96, i called UPS to see where my money was.
The radio was STILL IN WILL CALL. Upon talking to Mr. Short, he said he'd
given the money to his parents to get the radio, and that he'd call them,
and call me right back. UPS sent the package back to me that evening.

AGAIN, I had to call him (waited 24 hours) and he told me his father
has cancer and that may have had something to do with it. He took
my address and said he'd mail a check immediately. That was 1/12/96
and I got the radio back 4 days later. His check would make resti-
tution for BOTH mess-ups, and he still wanted the radio.

SO it's been 12 days; I've gotten mail from San Francisco in 2-3 days,
including one piece this week. 2 nights ago (1/23) I AGAIN called Mr.
Short and told him the check still wasn't here. He said "I sent it
Certified Mail," and that he'd check with the Post Office and call me
at 9 p.m. EST (he picked the time!).

I checked with MY Post Office and they haven't had had ANY certified
mail for my block in the last two weeks. I waited until 11 p.m. EST
for Mr. Short to call (the phone was free from 8 until 11) and he didn't.
It's been another 24 hours and still not a peep...

So I am still waiting for my check. What burns me is that he has not
specifically stolen anything from me (I still have my radio!) except:

1) My time (2 months)
2) COD shipping to CA times TWO ($30.00)
3) Phone calls (maybe 6 calls to CA)
4) Untold frustation in dealing with someone who obviously can't complete a simple transaction, and
5) My trust - this is the hardest to regain

There may be perfectly wonderful explanations for all of this, but Mr. Short hasn't given me any of them. Just consider my story when considering dealing with him...

P.S. If the money shows, I'll post a note to that effect.

wow..as we say here in the East..what a pair of ca hon nays

on 1 hand..i don;t like to qsl, so there for i usually don;t

on the other hand, i think its rude that someone who doesn't qsl should at least send my card back????

quite frankly, i keep your calls on file. should i ever go somewhere you need and work you..oopppss N.I.L

(not in log) so sorry

1372. Re: qsl etiquette (see Feb 1996 QST)

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-26 00:00:00 UTC
From: gbrown@unlinfo.unl.edu
Message-ID: <4e9jai$nao@crcnis3.unl.edu>
Source record: 231752

This is a little disturbing. When I first read the term "unsolicited QSL", I had to stop and think for a minute...this is a curious concept, indeed. And this "unsolicited QSL" is a bad thing? A sign of bad manners? Lets back up a minute.

It used to be said that a QSL card was the final courtesy of a QSO. During most of my ham career, sending a card seemed to be considered part of the responsibility one accepted when making a contact. Sending a card ("unsolicited") was (and still is IMO) just common courtesy. And checking the "PSE QSL" box simply means you'd be happy if the other person could do the same, nothing more, nothing less. Equating an "unsolicited QSL card" with "junk mail" is very sad.

I can understand that some people do not have the time to respond to a request for a card, and that's a decision they must make and others must accept and understand, but it's a serious decision. However, this idea that someone who sends you their card after a contact is somehow exhibiting bad manners just because you didn't explicitly say it was ok is just plain wrong-headed.

I don't send out QSLs to domestic contacts anymore unless the other station sends theirs and requests mine. But if I could not afford the time or postage to at least reciprocate, then I would have to change my operating habits (or find a way around the problem). For lack of a better aphorism: "If you can't do the time, don't do the crime."

When I drive up to do a contest from rare North Dakota, I do expect people to use some common sense and send an SASE if they can, but I know there will be lots of cards without. But still...if I can't do the card, I don't do the contact...

Bottom line (personal opinion only):
1) If you do not QSL, or if you require an SASE, be up front about it during the QSO if possible.
2) If you choose not to respond to "unsolicited QSLs" (I hate that term), do not keep them. Return them with a "sorry" note (if an SASE is enclosed) or throw them away. (By the way, simply rubber-stamping *their* QSL with "QSO confirmed" and your initials and returning it to them at least gives them a valid confirmation.)
3) Loose the attitude that those who send you a QSL are bad-mannered louts. They spent their time and money to send you their card thinking you might like it and hoping you might reciprocate.
4) If time and money are a problem, find a way around it. QSL cards are all part of the game.

Sorry for being such a long-winded OF.

I am trying to get in touch with an amateur radio operator who recently
relocated to the Hillsboro OR area. If you could attempt contact by
packet or voice, please email me and I'll email you the call sign.

Also, is there a Hillsboro club (or is it combined with Portland)?
I could use snail mail or email address for either.

Thanks!
Sharon

I would guess the FCC keeps it in the database at least until
the two year grace period expires. So it will stay at least until
the license anniversary date this year (1984+10+2=1996.)

I think this is a pretty poor attitude on the part of any contester who feels this way. In the contests, a significant percentage of the contacts are made between the avid contesters and folks who get on for a few hours to hand out contacts and look for a new state or country.

The die-hard contesters NEED there to be these casual, non-contester stations who will happen by. This is where a LOT of the points come from. Getting a returned card or no card from a contest station is like that contester saying, I really don't want your points in the contest!

1385. High-Power Mobile

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-26 00:00:00 UTC
From: bclongwell@delphi.com
Message-ID: <9601252317592.The_Win-D.bclongwell@delphi.com>
Source record: 231765

I want to upgrade my road-warrier mobile for high-power. Up to now, I've settled for the standard 100W output to the power sive antenna for 75-40-20. (100W for 15 and 10 is fine for mobile ... in the year 2000). I spend hours on the road, usually at night. I want to be heard. I'm tired of being a victim, stepped on, splattered on, lost to qsb, heard something in there but can't make you out. I want to be part of the QRM that everyone complains about. I want to here my direct-rectified ssb voice coming out of tinted cars with overpowered sound systems at traffic lights. (I'll switch to AM so I can tell them to turn it down).

What I'm getting at is I would like to add one o' those big "linears".

I'd like to know what experience others have had, what cars seem to be problematic (500W voice peaks cause the cruise-control to peg, ...)

Also, experience with the short list of mobile hf amplifiers. (Ten-Tec, Ameritron, and SGC that I'm aware of). I'm most interested in the SGC since it automatically bandswitches and needs no control head ... stick it in the truck, add 90 amp power source, corona-resistant antenna, aluminum driver helmet with ground, and your done.

I'm assuming that I might need to add an extra car battery in the trunk to keep my electrical system from the strain.

Thanks for the help.

1392. "This Week in Amateur Radio" Returns 1/27/96

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-26 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <RzAL4TN.sanderman@delphi.com>
Source record: 231772

"This Week in Amateur Radio" returns to satellite air this Saturday, January 27th, at 8:00 PM (EST). The weekly on-the-air bulletin service will be carried by the "Tech Talk Network" on Telesat Canada Anik E2 commercial communications satellite.

The network will utilize transponder 18, (9B vertical), at 5.8 MHz wideband analog audio (4.06 GHz). Anik E2 is located at 107.3 degrees west longitude in equatorial geosynchronous orbit and provides excellent coverage of North America with spot beams aimed at Alaska and Hawaii. The bird is expected to provide a permanent home for "This Week in Amateur Radio" into the 21st century.

The service carries ARRL and RAC bulletins, contest and convention information, propagation forecast summaries, RAIN, the Radio Amateur Information Network, the Amateur Radio Newsline, and other features in audio newsmagazine format on over 100 nets and repeaters throughout North America. It had been off of satellite air since Thanksgiving weekend.

You can also hear "This Week in Amateur Radio" four nights a week on the "Gateway 160 Meter Net" via WA0RCR in Wentzville, Missouri, on 1860 kHz, and in the Greater Capital District of New York Saturdays and Mondays at 8:00 PM on WA2OQE/R on 145.33 MHz.

"This Week in Amateur Radio" is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, NY. Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Satellite space and uplink services are provided by Skyvision, Incorporated as a service to amateur radio.

Further information is available from George Bowen, N2LQS, at 518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (e-mail sanderman@ delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

Affiliates are asked to please acknowledge receipt of this bulletin.

To: jlowman@netcom.com
Subject: Callbook CD-ROM - what data format?

J>Can someone give me a clue as to the database used for the new Callbook
>CD-ROM? There is a main data file in binary, with several .IDX index files.

I do not know but I can say this: the "Flying Horse" Callbook on CD ROM
is buggy. Tell me if you have this experience: when you switch the
mode of search, say from name to callsign, do you get an "out of
resources" error message? I do all the time. The only way I found to
get around this is to close the program and the bring it back up again.
I want to make sure that the program is at fault and not my computer.

OLX 1.53 All rising to a great place is by a winding stair.

MARKET MANAGER - ANTENNA PRODUCTS

Larsen Electronics is an internationally recognized supplier of quality antenna products for two-way communications. We are seeking an experienced Market/Product Manager for Amateur and Commercial antennas.

Successful candidates will have in-depth experience in radio related products up to 800 MHz. Direct experience with LMR and Amateur markets is preferred. Bachelor92s degree in Business or Marketing, or extensive related business experience required. Position responsibilities include: Product line management, pricing, sales programs, new products, training, and technical support. This position will also include a competitive compensation, incentive, and benefits plan.

Interested candidates may respond by forwarding a resume92 including income history to:

Larsen Electronics, Inc.
ATT: Human Resources Manager
P.O. Box 1799
Vancouver, WA. 98668-1799
FAX: 1-360-944-7556

Pre-employment drug screen required. Larsen Electronics is an Equal Opportunity Employer.

HAMFEST/COMPUTERFEST CALENDAR 1995/1996 - NORTHERN ILLINOIS
last updated December 31, 1995 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@att.com. Thanks to Dennis Dale and ARRL for providing information.

JANUARY 1996

Jan 28 (Sun) - Wheaton Community Radio Amateurs hamfest. The Odeum exposition center, Villa Park, IL 8am-2pm, admission $8. For info call (708)545-9950. Adv tickets are $6. For adv. tickets write WCRA, P.O. Box QSL, Wheaton, IL 60189 Very crowded, somewhat overpriced indoor hamfest.

FEBRUARY

Feb 18, Sunday: Rock Island, IL - Davenport Hamfest, Info, SASE to Kent Williams, 4245 10th St., East Moline, IL 64244. tel (309)796-0718.

Feb 25 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

MARCH

Mar 24 (Sun) - Computer Central, Harper College (see notes at the end of this article).

March 24, Sunday: Sterling, IL - Sterling-Rock Falls Amateur Radio Society hamfest 96. Info, call Lloyd Sherman, (815)336-2434.

March 31, Sunday: Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. Info: Francis Avellone, W9GLO 650 Green Bay Rd., Lake Bluff, IL 60044, tel (708)234-4124.

APRIL

April 21 (Sun) - Moultrie ARK, Arthur, IL. Info: Ralph Zancha, WC9V, PO Box 55, Lovington, IL 61937, tel (217)873-5287

April 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

MAY

May 11 (Sat) - Kankakee Area Radio Society, Peotone, IL. Info: Willis Bowser, K9IFO, 1210 North Riverside Dr., Momence, IL 60954-3452, tel. 815-472-2079

May 26 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JUNE

June 1, 2 (Sat & Sun) - Starved Rock RC, Princeton, IL. | Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 Usually an excellent hamfest, | with sellers from Illinois, Iowa, and Wisconsin.

June 9 (Sun) - Six Meter Club of Chicago, Willow Springs, IL. Info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925 tel: 708-963-4922.

Jun 30 (Sun) - Computer Central, College of DuPage (see | notes at the end of this article).

JULY

Jul 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

AUGUST

August 18 (Sun) - DuPage ARC, Stickney, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. tel: 708-985-9256.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: * Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville, IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. | RadioFest96. Holiday Inn Holidome and Convention Center, | 345 River Road, Elgin, IL 60123 Ph. (708)695-5000, | (847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 | Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, | 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

1398. Re: No Code = No Brain

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-26 00:00:00 UTC
From: tonyp@convex.com
Message-ID: <4eb69l$9ih@convex.convex.com>
Source record: 231778
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Wow - this subject has really lowered the professionalism of this
group to a true "amateur" status.

Let's back up a bit, "forest for the trees" and such...

Should the requirement for CW proficiency be continued?

The primary reason for the existence of amateur radio today is
public service. At one time it was for experimentation and development
of technology, but the electronic's industry has pretty well taken
over that task.

There is nothing that gets us better PR than a headline "Hams help out
at disaster site", and is great leverage in keeping our precious bands.

That being that case, let's look at a senario: Natural Disaster

Power knocked out. The repeater is on BBU, but that only lasts a short
time. Also, the antenna has been damaged. The one surviving repeater
in the area is a "closed" machine and you can't get into it with your
handheld.

VHF is great for getting stuff done locally but doesn't do
the out of state messages to your loved ones.

So you string up a hunk of wire, lug your HF transceiver out to the garage,
and connect it up to the car battery.

CW -vs- Everything Else:

OPERATION:
CW - hook up the hand key and you're ready.
EE - unavailable: no power for the computer, TNC, CRT, disk drive, etc.

SOS:
CW - recognized by every ham everywhere. If you are casually tuning the
the band you can pick it out, it is not necessary to specifically
"listen" for it.
EE - someone must "listen" for it.

CAPTURE:
CW - Take 2 seconds to send, 2 seconds to recognize.
EE - First you have to hope that your signal is strong enough for someone
to want to bother to tune it in. Yes, digital mode has error correction
and will get thru better than cw but you first need to link up and if
the guy at the other end is lazy or doesn't think it is worth the effort
he won't try. There is no way he could know you are sending an SOS.

DECODING:
CW - Ears.
EE - must have the correct digital mode equipment to receive your signal.

SPECIAL EQUIPMENT:
CW - handkey: as cheap as touching 2 bare wires together if necessary.
EE - varies from several hundred dollars to several thousand.

AVAILABILITY:
CW - All hams + boy scouts can copy.
EE - Not in every shack.

-

Last of all, don't forget that the code requirement below 30Mhz is an
international thing, and not something the FCC dreamed up.

>receivers today: a nice nostalgic toy.

Perhaps, if your focus is so narrow that all you can envision is
working Dx. However, for a microcellular data network, WBFM and
Gunn sources will suffice for quite a while. Eventually, as system
loading increases, and as we wish to exploit multipath immunity,
use of wideband SS will replace the simple Gunn sources, but narrow
band equipment will be the novelty, suitable only for low rate
point to point communications, which is surely the most trivial
application of that spectrum.

1400. GB2RS News 28th January 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-26 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <822710724snx@llondel.demon.co.uk>
Source record: 231780
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 28th of January and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First this week's headlines:-

A new DXCC Country has been created.

There are changes to the GB2CW Morse practice transmission schedule.

And there are several items of news for 50 MHz operators.

The ARRL announced on Tuesday that its Board of Directors approved a recommendation to add Scarborough Reef to the DXCC Countries List. QSL cards may be submitted to the DXCC desk from the 1st of April.

A new 50 MHz packet radio node was due to become operational on Saturday the 27th of January. It is GB7PW, located near Montgomery in Powys, and will operate on 50.650 MHz.

Also on 50 MHz, a GB2RS news broadcast serving Central Scotland starts on Sunday the 4th of February at 11.30 am. Initially, it will be for an experimental period of three months but will be continued if it proves to be a success. The transmission will be from the station of Tom Menzies, GM1GEQ, and will be on 51.530 MHz with vertical polarisation. Reports will be welcome, and should be sent to GM1GEQ via the RSGB QSL bureau.

And the ZB2VHF 6-metre beacon is temporarily off the air, due to an overhaul before installation at a new location.

Last Friday was the 70th anniversary of the first demonstration of television. John Logie Baird gave his historic demonstration to members of the Royal Institution in London on the 26th of January 1926.

The Bishop Auckland Radio Amateurs' Club is now an official City and Guilds examination centre for both the Radio Amateurs Examination and Novice Radio Amateurs Examination. The club also offers regular courses of tuition. For further details please contact Tim Bevan, G6WBA, whose address is: 6 Buttermere Grove, West Auckland, Bishop Auckland, County Durham. The postcode is DL14 9LG.

The Barnsley and District Amateur Radio Club is co-ordinating a coach trip to Friedrichshafen in June on behalf of the RSGB. The Friedrichshafen 'Hamfest' is Europe's largest amateur radio exhibition. The coach will depart on Wednesday the 26th of June and return on Tuesday the 2nd of July and pick-ups can be arranged at pre-determined

locations en route. Places are allocated on a first come, first served basis so contact the organiser, Ernie Bailey, G4LUE, without delay. He is available on 01226 716339, or 0836 748958, between 6.00 and 8.00pm.

The annual Guides 'Thinking Day on the Air' takes place over the weekend of the 24th and 25th of February. A pack is available from RSGB HQ consisting of a list of participating special event stations and details of the countries which permit third party Greetings Messages during the event. If your group is participating in Thinking Day on the Air and would like a pack, please send an A4-size self-addressed envelope, with 38p in stamps, to Mrs Eva Telenius-Lowe at RSGB Headquarters. Groups using a GX or similar prefix instead of a GB call are asked to contact HQ as well.

Is there anyone listening who can help Noel Midworth, G0WTA? He would be very interested to hear from any licensed amateur who has a pacemaker, or who has a family member at the same location with a pacemaker. Noel's address is correct in the RSGB Call Book under his previous callsign of G7SNL, or he can be contacted on 01 509 215 278.

And now some news about changes to the RSGB's GB2CW Morse practice transmission schedule:

An additional transmission for those wishing to develop their Morse speed is now being transmitted by GM4HYF in Rutherglen. The transmission is on Thursdays at 2045 on 3527 kHz using A1A only, and covers speeds from 15 to 30 words per minute.

The Glasgow 145.250 MHz transmission on Mondays at 2000 has now been taken over by GM0NPS.

Reports on all GB2CW transmissions are welcomed by the operators: please let them know what your particular speeds and requirements are. Feedback may be sent direct to the operators, or to the Morse practice service co-ordinator, David Pratt, G4DMP, whose address is correct in the RSGB Call Book. David would also like to hear from anyone willing to devote half an hour a week to provide Morse practice on the 1.8 or 3.5 MHz bands. If you are interested, please write to G4DMP suggesting the day, time and frequency on which you can help.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Madeira, Dick King, G3PFS, will sign CT3EU from Thursday the 25th of January, on all bands 40 to 10 metres.

From Aruba, K2LE should be active as P4/K2LE from Wednesday the 31st of January until the 17th of February on all bands.

And from Curacao in the Netherlands Antilles, a large American group will be signing "PJ2 Stroke Own Calls" until the 30th of January on all bands, emphasising the WARC and LF bands.

Next the Rally News:

The Fenland Repeater Group and Lincolnshire Packet Group is holding a "Mid-winter Rally" at 10.00 am today, the 28th of January, at the Youth Club, in Horncastle, Lincolnshire.

Next Sunday, the 4th of February, the Lancastrian Rally takes place at the University of Lancaster. Doors open at 11.00, or 10.30am for disabled visitors. For further information contact Sue, G1OHH, on 01 524 64 239.

Also next Sunday, the South Essex Amateur Radio Society Radio Rally takes place at The Paddocks, Long Road, Canvey Island. The event includes RSGB Morse Tests and candidates are reminded that they will need the test fee and two passport-size photographs. Doors open at 10.30 am. Further details can be obtained from David, G4UVJ, on 01 268 697 978.

And now a date for your diary:

The RSGB National VHF Convention takes place at the usual venue - Sandown Park in Surrey - on Sunday the 18th of February. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show and special interest groups. Full details are in the February edition of Radio Communication, which was posted to all RSGB members last week.

A new award in memory of Cyril James, G3VVB, and aimed at the home constructor of microwave equipment, will be presented for the first time at the RSGB VHF Convention. If you have an item of home-made microwave equipment and you are proud of the way you've constructed it, then why not bring it along to the Convention and enter it in the competition? The equipment can be constructed from any design, or from a kit - what the judges will be looking for particularly is quality of construction and finish. If you cannot attend the Convention in person, you may send detailed photographs and a written description to Steve Davies, G4KNZ, whose address is correct in the RSGB Call Book.

Now for the HF contest news:

The RSGB LF Cumulative Contest continues with a 40 metre session today, Sunday the 28th, a 160 metre session on Thursday the 1st of February, and another 40 metre session next Saturday the 3rd. The final session is an 80 metre one, on Sunday the 4th of February. The rules were published in last September's RadCom, but please note that the dates were given incorrectly in September. The correct dates are shown in the January and February RadComs.

The CQ World Wide 160 metre CW Contest is taking place this weekend, and ends at 1600 UTC today, the 28th. Brief rules appear on page 23 of the January RadCom.

Next some VHF contest news:

The second of five sessions in the RSGB 70 MHz Cumulative Contest takes place today, the 28th, from 1000 to 1200 UTC.

Next Sunday, the 4th of February, the 432 MHz Fixed station and Affiliated Societies Contest takes place. The rules for these contests can be found in last September's RadCom.

Now some news from Ian Cornes, G4OUT, of the RSGB VHF Contest Committee:

Despite average to poor conditions being reported for all sessions of the 1995 RSGB 432MHz cumulative contest, there were many DX stations to be found in France, Germany, Jersey, Belgium and Holland. Peter Tribe, G0VVE, won each of the four sessions in which he worked and consequently became the winner of the Single Operator Fixed Station Section ahead of Stephen Redfern, G4AEQ. The Open Section was won by Allan Duncan, GJ4ZUK, from his portable station on the north coast of Jersey. The six-strong South Birmingham Radio Society operating as G8OHM, who were placed second in the Open section, appreciated contacts with the continental stations who were participating. Support for this contest continues from Holland where PA0GHB, was the highest placed overseas station, with PE1EWR in second place. Other certificates went to Chris Skelcher, G3YHF, who was the highest placed single operator fixed station using 25W or less to a single antenna; G3FIJ, second highest in this category and 2E1AXO, the highest-placed Novice operator.

And now the solar factual data:

The period from the 15th to the 21st of January saw solar activity at very low levels and the geomagnetic field at quiet to unsettled levels. For most of the period the solar disc remained spotless, but on the 21st a small spot group emerged. The mean for the period was 7. Solar flux levels increased very slightly from 70 units on the 15th, to 72 units by the 21st, with an average of 71 units. No solar flares were reported. The electron fluence remained at a moderate level. X-Ray flux remained at the minimum value of A1.0 units every day. The 90-day solar flux level on the 21st was 74 units, the same as last week.

Geomagnetic activity remained at quiet to unsettled levels every day. The most disturbed days were the 15th and the 20th, with an Ap index of 12 and the quietest day was the 21st with an Ap of 6. The average for the period was Ap 8 units. The aa indices, as supplied by the British Geological Survey for the period from the 9th to the 15th of January, started at quiet levels with only 7.2 nanoTeslas, but increased every day to peak at 42.5 nanoTeslas by the 14th. It declined slightly on the 15th, to give an average of 23.9 nanoTeslas, about K3.

I'll repeat the figures: spots - 7, flux - 71, Ap index - 8, X-Ray flux - A1.0.

Now the ionospheric data for Central France:

The period from the 12th to the 18th of January saw the F2 critical frequencies at Poitiers, as reported by Meudon, at a rather disappointing level. On the 12th levels were at only 5.2MHz. They did increase slightly to peak at 6.3MHz on the 15th, but then declined to 5.4MHz on the 18th, and the average was 5.8MHz. The darkness hour lows also declined from 2.7MHz on the 12th, to 2.2MHz by the 18th and

averaged 2.4MHz. These are the lowest levels for some time. The daytime highs took place between 1000 and 1500 hours and the darkness hour lows between 0500 and 0700 hours, except for the 15th when they took place at 1900 hours.

I'll repeat the figures: highs - 5.8MHz, lows - 2.4MHz.

And lastly the solar forecast.

This week the more active side of the sun will be looking our way. On the last solar rotation several solar flares took place, but the sunspot group responsible was declining as it rotated away over the west limb. Even so, solar flux levels are expected to increase to the high 70s. Geomagnetic activity is expected to remain at quiet levels for all of the coming week. Ionospheric MUFs could well improve over recent weeks and be up to 17MHz during daylight hours in the south or 14MHz in the north. The darkness hour lows are expected to be at about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Uniform and G7 Victor Zulu series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Quebec series.

1402. IC-706 Noise Blanker

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-26 00:00:00 UTC
From: bclongwell@delphi.com
Message-ID: <9601252317591.The_Win-D.bclongwell@delphi.com>
Source record: 231782

I just got an Icom IC-706 for the car. I like it, especially the remote control head feature, but the noise blanker is ..., well, blank. I used to use an IC-735 mobile, and it had a very effective blanker with level control. I could turn on the wipers and drive under a HV power line and copy the "fb OM, ant here is ..." downright fb, gangbusters, cruise-control copy. The IC-706, however, has a placebo noise blanker.

Anyone else ? Suggestions to tweak it ? Outboard processors ? (Please, no correct-the-problem-at-the-source suggestions, I can fix the wiper motor, but those power lines ...)

Thanks

Operation of ANY two way equipment aboard a scheduled air carrier is allowed only with permission of the operator. The Captain of the aircraft DOES NOT have that authority. The permission would have be attained from the carrier proper, ie Delta, USAir, United, Northwest etc. I forget the FAR that applies, had it written down somewhere but I believe it got lost with the last harddrive crash.......

>EE - unavailable: no power for the computer, TNC, CRT, disk drive, etc.

Uh, really SSB is the mode of choice in this case. Digital could be useful,
for traffic passing, though, and a laptop computer ad a TNC run off 12 volts
DC just as well as the HF rig does. Heck, one of those cute HP palmtops
will run for weeks on a couple AA cells.

>
>SOS:
>CW - recognized by every ham everywhere. If you are casually tuning the

>EE - someone must "listen" for it.

Get on 20 meter SSB and say "MAYDAY" and you'll get attention, by god.
If you're just passing traffic you're going to hook to one of the
HF BBS systems, which are patiently ALWAYS listening since they're
robots.

>

>CW - Ears.
>EE - must have the correct digital mode equipment to receive your signal.

Cost of effective modern HF CW station = $2000. Cost of effective
modern HF digital station = $2300 (plus a computer, which is a
household appliance, or a dumb terminal, which can be obtained
for peanuts.) (Yah, you can scrounge to get the dollar
cost of the rig down -- you can scrounge to get the dollar cost
of the digital equipment down, too.)

>
>SPECIAL EQUIPMENT:
>CW - handkey: as cheap as touching 2 bare wires together if necessary.

1409. ham havoc

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-26 00:00:00 UTC
From: perv@ophelia.waterloo.net
Message-ID: <4eb34s$epj@ophelia.waterloo.net>
Source record: 231789

Amateur radio operators (hams) are creating worldwide havoc, how may you ask ? well these seemingly harmless radios emit radiation across the world. The scoundrels that use transmitting devices actually transmit radio waves that can cause cancer and genetic havoc, remember there has to be a lot of power to send a voice signal from Canada to Africa !! at this very moment radio waves are being bounced at the ionosphere, hemisphere whereby they bounce off this enevelope sourounding the earth and are reflected into another part of the world !! radiation galore ! Not only is radiation harmful to humans, but what about the catastrophic mess thats done to our television and radio reception. You can be sure that a lot of these scoundrels build homemade equipment in the darkness of their basements that exceed the rules of society, creating further disaster to the environment. Wha can we do ... well perhaps taxing the operators to a hefty sum would suffice, you see most of the radio transmitters have to be licenced, most are ?
contact your local member of parliment or senator and strongly suggest that the taxes for licencing be raised greatly, we all can use the extra finances for worthy projects, like feeding the hungry children of the world.

>If you don't live in Wisconsin, please excuse the bandwidth.

There would be no need to ask our pardon if you'd properly set the
Distribution header line in your message. The reason the Distribution
attribute exists is so that messages of only local interest can be
limited in distribution to only the local area. If you leave it blank,
as I have in this posting, the default distribution is *world*. But there's
no reason to leave it blank if your message is intended for a smaller
audience.

Each area has its local distribution codes, state codes, regional codes,
country codes, and the default of world. If you don't know the proper
distribution coding to use, ask your sysop. There's no use wasting
the entire world's time with, for example, an announcement of your
local BBS number in Los Angeles when a distribution of LA would limit
it to only those who might care. Same with notices of exam sites for
a locale, IE exam notices for Southern California should have a distribution
attribute of SoCAL. And the same goes for the president of my local club who
recently spammed the world about an event that should have been limited
to an ATL distribution (or at most to a GA distribution). There's no good
reason to spam the net when the tool to prevent that is available to you
in *every message header*. It's just good nettiquette.

In the proximate case, there was enough of non-local interest in
your post to justify the "world" distribution (or at least a
USA distribution), but because that's true, you needn't beg
forgiveness for using the bandwidth.

Sorry to seem to be singling you out for this lecture, but yours
is just the most recent of a number of posts of this nature. Please
everyone, use the Distribution attribute properly for locale specific
postings. If you don't know how, ask your provider. If he tells you
his system won't permit it, demand he fix his system. Every usenet
message has a Distribution attribute in the header, and every system
has to have a way to set it to some value.

1411. Re: QSLs & contesters [was QSL etiqutte]

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-27 00:00:00 UTC
From: geo@nando.net
Message-ID: <4edabh$590@castle.nando.net>
Source record: 231541

I can't promise this is a good strategy, but it seems to be. Try not to QSL the "big contesters". They are the ones making the really big scores by working a really big number of people, which causes them to get a relly big amount of cards that they feel is a really big hassle.

There are a couple of reasons that it is tough for these guys. Big contest stations and antenna arrays take a lot of maintenance time that us "regular hams" don't have to deal with. Another thing is that often even in a multi-multi station the station owner is not even present. Would you want to answer hundreds of cards when your 40M stacks were sagging?

Look for people like me. I usually work between 100 and 600 QSOs when I do a contest. This generates 5 to 25 cards depending on the test and mode. I answer all cards, but I really grimace when I have to pay 32 cents so I can have another California on 20M RTTY!

I enjoyed your post so please don't consider this as criticism. But I would like to point out that a fair amount of the out of state messages "to your loved ones" have been going via amateur satellites in the past few years. The same satellites that have their inputs and outputs on VHF/UHF, and the very same satellites that would still be in operation in the disaster scenario you've suggested.

Better than all that is the fact that the satellites are somewhat under-loaded, and under-utilized. Which is super, because their capabilities would be very much in demand during a disaster of the type and scope you're thinking of.

All in all, things are looking up. (Sorry...)

In article <wa2iseDLtDLH.Bxs@netcom.com>, wa2ise@netcom.com (Robert Casey)
wrote:

>looks like someone created a new collection of newsgroups: alt.ham-radio.*
>Saw them today being added to my .newsrc here on Netcom. There's one for
>dx, another for fm, packet, binaries and such.
>The binaries one looks useful, post your ham computer programs there.
>The others look redundant with the rec.radio groups.

They have appeared at Altnet also.

I looked over in control and found that <brian@ucsd.edu> created these
newsgroups. Since he doesn't include a message that they were discussed on
alt.config many sites will not add these (of course others will not add
them because they are alt newsgroups, because the rec.radio.amateur
newsgroups exist, etc, etc, etc)

Full list:

alt.ham-radio.mods,
alt.ham-radio.morse,
alt.ham-radio.nocode,
alt.ham-radio.uwave,
alt.ham-radio.vhf-uhf,
alt.ham-radio.am,
alt.ham-radio.amtor,
alt.ham-radio.atv,
alt.ham-radio.binaries,
alt.ham-radio.digital-voice,
alt.ham-radio.dxing,
alt.ham-radio.eme,
alt.ham-radio.exotic-modes,
alt.ham-radio.fax,
alt.ham-radio.flame,
alt.ham-radio.fm,
alt.ham-radio.hf,
alt.ham-radio.packet,
alt.ham-radio.rtty,
alt.ham-radio.slowscan,
alt.ham-radio.spread,
alt.ham-radio.ssb

I predict that most of these will be unused; either because they cover
topics already in existing newsgroups, or because they are lame.
I had been thinking that we should talk about two of these anyway. a
binaries newsgroup and a VHF-UHF newsgroup. I think they still -might- be

needed as these may not get well propagated.

>73.

I have had a 2700 for a while now. I think it is a piece of junk for the price paid. I agree with the above comments. I sent it in to ICOM when I first hooked it up and they said everything checked out OK. BUT it is extremely sensitive to intermod. I have compared to my IC 3230H and several W2A HTs hooked into the same mobile antenna system. The 2700 just does not cut the mustard.

There is a mod to increase VHF receive range. They did it for me when I sent it in. It has something to do with jumpers. Maybe someone else out there knows about it.

Right now I would rather have another 3230 than the 2700. Unfortunately, I spent the money to get it new, and I would get hosed in a trade.

The only USA CW-only allocations are 50.0-50.1MHz and 144.0-144.1MHz.

Don`t know about you but these idents are a pain in the bottom!, I was just
listening to 144.650 the other day (not a pleasant sound at the best of
times!) when i realised our through-put to our local BBS would be improved
enormously if everyone switched off the ID`s. My poor DCD led stays alight
for ages when all the ID`s start! (like buses, they all come at once!)...

Hello Gang,

I've got some telegraph key restorations going and need a few parts to
finish up.

1. Bunnell Gold Bug -- need the circuit closing lever and mounting hardware.
2. McElroy A-400 bug -- need thumbpiece and weights. A-400 or P-500 parts OK
3. Signal Electric Semantic -- need the pendulum stop post.
4. Electro Bug -- need weights. need one thumbscrew and jam nut.
5. Levinson Radio "Like-A-Flash" -- need finger pieces, binding posts.
6. Logan SPEED-X reverse frame -- need finger pieces
7. Clapp-Eastham -- need binding posts
8. Independent Wireless -- need binding posts

Would buy parts off your junkers or buy your junkers for the parts.

**** Want Old Telegraph Keys ****
I am looking for old Vibroplex bugs for my collection. Also interested
in off-brand bugs, hand keys and pre-1920 telegraph instruments. Will
purchase or trade my duplicates. Email for my list of duplicates for trade.

You can look in one of the on-line data bases for ham addresses and serach
by city. You don't need to include a call. You can do this with
Buckmaster or QRZ.

Roger:

You'd probably do well with a Technician class license. I believe there is even one available now with no code requirement (in the U.S.) My RC friends tell me it could be valuable because of the interference encountered by them using the normal RC channels since frequency allocation changes.

You might, of course, run across interference on the ham bands that are legally useful for radio control just as the RCers did on the CB band years ago, but that's another story. All allocations are crowded. :-)

Good luck,

Ham radio operators are just a bunch of glorified C.B. radio operators anyway. They will do anything to keep others from using their bands, namely requiring a code test.

Face it, nobody really builds their own radios any more. Look in the ham radio magazines and what do you see? Answer: mega-dollar ham radios. This is the only difference between a ham radio operator and a C.B. radio operator.

There is no reason why anyone shouldn't be able to get one of these radios and get on the air. There are portions of the bands reserved for CW so why lock others out of the other portions of the bands. Does knowing code make a ham radio operator better at using SSB? Answer: hell no, it is simply a thinly veiled attempt to keep others out.

If this attitude were pervasive, we would have penmanship tests to use a state park, pie eating contests to drive on the public highways and height requirements to run for elected office. The code test is simply no longer relevant to operating a ham radio.

Ironically, these ham radio operators have been so damn pig-headed that the numbers of operators are in the decline and many of these bands are starting to look like prime auction material for the F.C.C. In the end, these bands will end up owned by some telecommunications company for wireless networking and none of us will be using them without paying a monthly fee to the phone company.

> This message assembled from 100% recycled electrons (and pixels).

Mike, I DID have an FM-27B and it was nothing like ANY other radio. Certainly NOT the 13-510. The 13-510 was a PLL synthesized radio, much the same technology used in the radios of today, except without the microprocessor.

The FM-27B on the other hand, was of a technology called a "Crystalplexor" which used several crystal oscillators combined with a single vfo to tune the frequency of the radio. That, coupled with poor filtering, is why the FM-27B became known as the 'WAN' or Worked All Neighbors radio. Looking at it's output on a spectrum analyzer made you think you were at the Dayton Hamvention looking at the two meter band with a gain antenna. :)

I wouldn't reccommend putting this radio back in service, unless you live in a very rural area, far from any population center. Otherwise, you will soon find yourself the recipient of numerous interference complaints from people both in and outside of the ham bands. Whatever you do, DO NOT use an amplifier after this radio! It will amplify not only your desired signal, but all the spurious ones as well, dividing it's total RF output among them in proportion to their amplitude and proximity to the center frequency the amplifier is tuned to. I've seen spurs coming out of one of these radios that were LESS than 10 dB down from the disired carrier frequency. With the nominal 25 watt output of the barefoot 27B, that would be at a power level greater than 2.5 watts! More than enough to drive an amplifier with 8 dB of gain to over 15 watts!

The radio does, however, make a nice doorstop, conversation piece, or bargain basement spare receiver. Just be very careful transmitting with it.

73's and G.L.

I see many radio kits in the Ham Magazines. From HF to UHF.
Any fool can buy a CB at K-Mart and get on the air. But a ham at least knows
how his radio works! Also thoes "mega-dollar" radios are not for everyone.
Hell go to any hamfest and get on the air for 100 bucks!

> There is no reason why anyone shouldn't be able to get one of these

Sounds to me that you just dont want to take the time to learn the code.
Its not hard at all, hell an hour a day for a month and you will do 13wpm.
Its true that code is out dated, but if you really want HF complaining
about the code will not get you there. It is a international agreement that morse
code is a requirement.

From: charlott@nyc.pipeline.com
Message-ID: <4eep4d$hev@pipe10.nyc.pipeline.com>
Source record: 231563

I am living in an RV in south central Texas and I am trying to rig up am FM antenna (89.1 MHz) so I can receive a public radio station from about 80 Mi away. I took a long spool of wire and ran it between two trees and It sort of worked. Of interest, it worked better when there was about an 8 ft sag in the middle. The ends are about 60 feet apart and 20' above the ground.

Does anyone have any other ideas on how to get a better signal (aslo cost effective!)

thanks

Chuck, your questions seem to indicate that you have yet to pass your FCC amateur radio license to operate that 2 meter radio. If you have passed the exam, you need to go back and review those Tech. exam questions and answers. All of your questions are answered there.

Don't let this response put you off. Email me if you need further help.

RTTY is mostly in these spots:

28.080 - 28.100 (not important at this time, due to dead band)
21.080 - 21.100
14.080 - 14.090
7.035 - 7.040 (DX and DX-North America)
7.080 - 7.090 (North america, but difficult on the east coast)
3.580 - 3.625

Note that ARQ modes (amtor, pactor, gtor, clover) are generally just below the RTTY spaces. It is considered impolite to use the ARQ modes in 14.080 to 14.090, for example, but 14.065 - 14.090 are fine. HF packet is normally just above the RTTY bands. Again it is not polite to put the wide packet signals across the RTTY bands.

I can't recall the last time I read something as nauseatingly hypocrical
as this. Was this a joke or were you snorking coke, Al?

Don't judge the "next guy", Al, for you're at the back of the line with
that first statement of yours. If you can't be bothered buying a 20 cent
stamp then just peel off the stamp from the other fellow's card and reuse
it. Sheesh!

looks like someone created a new collection of newsgroups: alt.ham-radio.*
Saw them today being added to my .newsrc here on Netcom. There's one for
dx, another for fm, packet, binaries and such.
The binaries one looks useful, post your ham computer programs there.
The others look redundant with the rec.radio groups.

I tend to agree with you Jeff. Yea, they can look my call up as well. I am a nocode and damn proud of it. Fact, I was totally surprised I even passed the test at all. Now that I have it, i'm enjoying it fully. I would like to eventually upgrade. But no time soon. Only reason I got into this hobby, was to have something else in common with a ham I was dating. I found that I liked it, and continue to talk on air every day. I even help to run the cycle 3 session traffic net and have joined r.a.c.e.s. So, who sya we have to have code to do anything. I enjoy 2mtr and will eventually work 6mtr.

1451. This Week in Amateur Radio #148 (for air through 2/2/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-27 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <h9LLAxG.sanderman@delphi.com>
Source record: 231632

Here is a summary of news items covered on edition #148 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 2-Feb:
-
1. Dramatic Leadership Changes at ARRL Annual Meeting
2. FCC Chairman Reed Hundt Says Commission May Be Going Broke
3. "Amateur Radio Newsline" - Edition #963 from Los Angeles
4. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
5. Weekly Propagation Forecast with George Bowen, N2LQS
6. Veteran Space Shuttle Astronaut Resigns from NASA
7. Amateur Reports on 5 Watt Mir QSO
8. AO-10 Goes into Seasonal Funk, Batteries Not Being Charged
9. Upcoming Special Event Stations
10. "The RAIN Dial-up" from Chicago
-
This week marks the return of "This Week in Amateur Radio" to
satellite air. Affiliates not previously contacted of the change
are asked to please contact the program's producers.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "Tech Talk Network" each Saturday at 8:00 PM (EST)
on the Telesat Canada Anik E2 commercial communications satellite,
transponder 18 (9B vertical), 5.8 MHz wideband analog audio
subcarrier (4.06 GHz), located at 107.3 degrees west longitude in
equatorial geosynchronous orbit. It's carried on VHF/UHF repeaters
throughout North America and on 160 meters at 1860 kHz. Contact
your local amateur radio club or repeater operator if "This Week in
Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Satellite space and uplink services are provided by Skyvision,
Incorporated as a service to the amateur radio community. Further
information is available from George Bowen, N2LQS, at 518/283-3665
(e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-
6809 (e-mail sanderman@delphi.com). You may also reach them @
WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

If you don't live in Wisconsin, please excuse the bandwidth. This is, however, useful information for hams living under restrictive antenna regulations.

TO: ALL WISCONSIN RADIO AMATEURS
FROM: GARY SCHWARTZ K9GS

SUBJECT: WI TOWER BILL LRB 3258/2, CHANGES TO STATE STATUTES

I am happy to announce the creation of a series of amendments to the Wisconsin State Statutes that would restrict the ability of counties and municipalities to regulate the installation of Amateur Radio towers.

While I am not part of the group that originated this legislation, I've agreed to help spread the word to garner as much support as possible from the Amateurs in Wisconsin. I have some key contacts in the Wisconsin State Legislature, but the hams in our state NEED YOUR HELP!

The following is an excerpt from a memo now being circulated by the co-sponsoring members of our legislature, State Senator Richard Grobschmidt and State Representative Ben Brancel to other members of the Wisconsin Legislature.

"We are introducing legislation at the request of constituents which would restrict the ability of counties, cities, towns and villages to regulate the placement, screening or height of amateur radio antennas".

"LRB 3258 is modeled after current provisions which restrict local governments from regulating certain satellite antennas. In addition, it restates the preemption language contained in the Amateur Radio Preemption Order of the FCC. This language provides that the local regulation must 'represent the minimum practicable regulation to accomplish the local authority's legitimate purpose'."

These amendments would be placed on Wisconsin State Statutes 59.97 (4d), 60.61 (3c) and 62.23 (7) to create 59.97 (4dm), 60.61 (3d) and 62.23 (7) (hf) respectively. The text of the amendment(s) follows:

AMATEUR RADIO ANTENNA FACILITIES. The (board/town board/governing body of a city) may not enact an ordinance or adopt a resolution on or after the effective date of this subsection, or continue to enforce an ordinance or resolution on or after the effective date of this subsection, that involves the placement, screening or height of amateur radio antennas unless the ordinance or resolution is reasonably crafted to address a specific health

or safety concern. The (board/town board/governing body of a city) may not enact an ordinance or adopt a resolution on or after the effective date of this subsection, or continue to enforce an ordinance or resolution on or after the effective date of this subsection, that involves the placement, screening or height of amateur radio antennas if the ordinance or resolution is based solely on aesthetic considerations.

WHAT YOU CAN DO TO HELP PASS THIS LEGISLATION !!!!

1) Call you State Representative AND your State Senator and URGE THEM TO SUPPORT LRB 3258/2.

2) Request both your State Representative AND your State Senator to become CO-SPONSORS of LRB 3258/2. They must sign on as co-sponsors by February 2, 1996!

3) PASS THIS INFORMATION ON TO OTHER HAMS ASKING THEM TO CALL THEIR STATE REPRESENTATIVE AND SENATORS RIGHT AWAY!

I feel that if every member of the legislature were to get several dozen phone calls and/or letters this bill stands a VERY good chance of getting passed. But, this needs to happen NOW.

Please talk this up at club meetings, on the air, and with all your Amateur friends.

The Radio Amateurs of Wisconsin are depending on you to get this passed. Let's show our government representatives that we have a voice and can COMMUNICATE. This is what hams do best!

Thank You for your support!

--

>believe it got lost with the last harddrive crash.......

You're right, and for the operator (carrier) to grant
permission, the operator must certify that the *particular*
piece of equipment won't interfere with the avionics of
the *particular* aircraft in which it is to be used. That
requires a certification check which typically requires
taking the aircraft out of service for a day. No carrier
is willing to do that, so no carrier will grant permission.

Gary

I couldn't agree more. With the current sunspot situation and my
antenna setup (a ground-mounted R7 and a G5RV over the roof),
and having worked the 200 or so easier DXCC countries, I've set
my sights on single-band single-mode WAS for the time being. After
recent contests, I've done a bit of experimenting - sent out some
QSLs with SASEs and some without. Believe it or not, I get almost
exactly the same return rate - 50%. Now without the SASE, I can't
feel too upset. But to get no reply whatsoever when there's an
SASE enclosed bugs me -- if the guy doesn't QSL at all, he could
at least put my card, which I know he doesn't want (nobody wants
another VE3), back in the SASE and stick it in the mail. What would
that take - 5 seconds? I'd get the message.

A few days ago you commented about Canadians not enclosing return
postage. One reason is the cost. IRCs up here cost $3.50 (Cdn),
although the most you can get back for one is a 90-cent stamp,
and then only if the IRC originated overseas. According to official
post office policy, an IRC originating in the US gets you a 52-cent
stamp, and one from Canada that you just paid $3.50 for gets you a
45-cent stamp! US stamps are not all that easy to come by, either.
I order mine from the USPS philatelic service, but with postage
and handling, a sheet of 100 46-cent stamps (that's right, 46 cents
to Canada) ends up costing me over $60 US. If you can't justify
buying sheets of 100, what do you do? Put in a green stamp, I guess.
But at a 50% return rate, that's not too appealing either, for
what amounts to a domestic QSO.

Oh well, if chasing awards was easy, no one would do it.

73, Rich - VE3IAY

$3 a minute for 2400 baud tops? Get real! No, we need networks at
pricing we can afford so that we can remain connected. Ricochet is
$29.95 a month *flat rate*, unlimited hours, 100kb speed. That's
more realistic. That allows the network to contain most of the
resource intensive features and allows our PDA to act as merely
an interface. That lowers cost and bulk to the user.

Interesting. Unfortunately, I've just taken a tour through my news
reader (Free Agent) and can't find any way to restrict the
distribution of my posts. There IS NO distribution header other than
the newsgroup pointer. And, since Free Agent comes undocumented
(other than the worthless help files) there isn't an index on which to
search for the distribution feature.

Any clues?

>HF communications.

Perhaps, but lets look at the rest of the rest of the
story. As noted in Newsline the Tech+ category has only
risen by 10,000 over the period, or a 7.75% increase
to a total of 139,500 Tech+ (note however that still
makes Tech+ the second largest amateur class). The code
test free Tech has increased infinite percent, of course,
since they started at zero. So we have to look at raw numbers.

There are now 149,745 code test free Techs. That makes them the largest class (and one could posit, the source of almost all amateur growth).

If we assume your increases all come from that group (your implication), then we could naively assume that 30.6% of Techs are upgrading directly to General or above, skipping the Tech+ step. But if we assume that, then the Tech numbers had to be larger in the past, because they are no longer Techs and aren't included in the 149,745 current Techs. I haven't heard any reports of the size of the Tech class *shrinking*. So obviously, that naive assumption must be false. (I suspect the correct interpretation is that the Tech class has been growing even faster than the 149,745 current Techs indicates. If we accept that, then Tech actually had a growth of 195,581 over the period, with the current numbers representing the residue who didn't upgrade. That's a shaky assumption, however, since some people may have skipped Tech and started at a higher class level.)

We have to look further to see where the upgrades are coming from, and what they really mean. For example, how do the growth numbers you present look when stated as a percentage of the *class* in which they occurred? How about posting the raw year by year numbers of amateurs by class you used to come up with your figures, and *include* the numbers for Novice, Tech+, and Tech? Then we can see the real story.

In fact, I'd like to see the raw numbers by class and by country for the entire world over the period, do you have a pointer to where those might be found? I'd think the IARU would have figures.

It looks to me from the limited numbers presented that the previously nearly stagnant General class has been a big winner in that Techs are stepping over Tech+ and going direct to General (but the numbers might not look so significant when expressed as a percentage of total General licensees). Most of Tech+ appears to consist of old Techs who were grandfathered. They didn't have an interest in becoming Generals, as witness your pre-code test free numbers, and likely don't have that interest now either. So we could posit that 10,000 of the total increase in General in the last 4 years came directly from the Tech ranks. Of course some of that could have come from the unmentioned Novice class, or directly from the ranks of the unlicensed, some 300,000,000 of them, they clearly are the *largest* class. :-)

But lets buy into the idea that they all came from the ranks of the Techs. That tells us that 6.6% of Techs are upgrading to General if we base that on the 149,745 current Techs, but that would be in error. If we assume that the real growth in the Tech numbers over the period were 195,581 (with the 149,745 current Techs representing the residue who didn't upgrade), then Techs upgrading to General represent about 5.1%.

Advanced and Extra gained 14,449 and 19,734 respectively, but we can't be sure that those gains came from the Tech ranks. They could represent gains from any of the other classes, or even from the unlicensed. However, following through with the same type of analysis, we see a delta of about 10,000 in Advanced upgrades pre and post the code free Tech. So we can attribute that to the Tech pool, and thus see another 5.1% of Techs upgrading to Advanced. Similarly for Extra, the delta is about 8,000, or about 4% of Techs are upgrading to Extra. So about 14.2% of Techs have upgraded over the last 4 years if we are to believe this analysis. That means that 85.6% *aren't* upgrading, which supports the Newsline contention that most Techs aren't upgrading.

While there's no doubt that the introduction of the code test free Tech license has benefited all amateur classes, clearly the largest benefit has to be to the Tech class itself. US Amateur radio as a whole has grown almost 32% since the introduction of the code test free Tech license, and most of that growth has *remained* in the code test free class.

Complicating all this, of course, is that the amateur license database hasn't been purged since the introduction of the 10 year license. Considering the average age of amateurs pre the code test free Tech, the actual living number of higher class licensees is almost certainly overstated by some amount. One assumption I've seen claims that 20% of amateurs licensed under the 10 year license may have become silent keys. If that's true (an average death rate of 2% a year), then when the database is corrected, we may find the figures skewed the other way from what your numbers indicate.

I'd like to echo Gary's sentiments. I too had a FM-27B, and what he
says is correct, though technically it didn't have a VFO, rather it
had multiple VXOs. The only dirtier rig I've owned was the Regency HR-2.
And at least it didn't drift, the Clegg did. It was certainly a novel
radio for its time, but not something I'd want to put back on the air
today.

Modification of ham equipment is legal, if done by a licensed ham and
used on ham frequencies. I doubt if many of the people in rec.radio.cb
are licensed hams, or are using their equipment on the ham bands. If
they're not licensed and/or are using their equipment outside the ham
bands, it IS illegal.

Leading a recent ARRL bulletin is the following paragraph.

"A committee will be appointed by the President to draft
ARRL policy positions, based on membership input, on
questions to be addressed at WRC-99. Issues to be studied
include possible simplification of the licensing structure,
harmonization of licensing standards internationally, and
consideration of Article S 25 of the international Radio
Regulations, the technical and operational rules governing
the Amateur and Amateur-Satellite Services, including but
not limited to the HF code requirement."

WRC-99 represents a "once in a generation" chance for us to
influence the rules and regulation for the Amateur Radio
service into the next century. Don't let it slip away without
YOUR views being heard and considered, and don't expect those
views to be heard if you only post them here in front of the
small inbred audience of r.r.a.*
I don't yet know who President Stafford will appoint to
this committee, but we don't need to wait for that announcement
to get started. Start talking NOW to your Division Director,
Vice Director, Section Manager, or anyone else who will listen.

73, de Hans, K0HB

Ah, swimming along quietly under the surface, the trout sees an
alluring bait dancing on the surface. SNAP. Hooked. :-)

In article <warnergt-2701962149530001@cs3-04.eph.ptd.net> warnergt@postoffice.ptd.net
(George Warner) writes:
>Ham radio operators are just a bunch of glorified C.B. radio
>operators anyway. They will do anything to keep others from using
>their bands, namely requiring a code test.

It certainly is possible to label hams as glorified CBers, and
there's enough truth in it to hurt. But amateur radio encompasses
more than what CBers can do, and the characterization only really
applies because of the number of CBers who are ham wannabes. If
CBers used their service for its intended purpose, it wouldn't look
at all like a junior brother of amateur radio.

You're unfortunately spot on with your code test comment, however.
It is mainly a way of rationing access to certain frequencies
(primarily frequencies used for modes *other* than Morse). That's
backed up historically in the book _200 Meters and Down_ as a goal
of the amateur community as far back as 1934. The book says that
access to HF *phome* privileges should be (and was) rationed by a
higher speed *Morse* test to prevent crowding on the *phone*
frequencies. There were 12,000 amateurs licensed to use phone at
that time, and that was considered too many. Wonder what they'd
think about today when 20 times that number use the same spectrum?

>Face it, nobody really builds their own radios any more. Look in
>the ham radio magazines and what do you see? Answer: mega-
>dollar ham radios. This is the only difference between a ham radio
>operator and a C.B. radio operator.

Mega-dollar? Surely not. Kilo-dollar perhaps. Many amateurs do
build, though perhaps not so much from scratch anymore. There
are a number of kit suppliers who seem to be doing well, and
the appetite for radio modifications seems boundless. And best
of all, its legal, unlike on CB where such experimentation is
forbidden.

>There is no reason why anyone shouldn't be able to get one of these
>radios and get on the air. There are portions of the bands reserved
>for CW so why lock others out of the other portions of the bands.
>Does knowing code make a ham radio operator better at using SSB?

>If this attitude were pervasive, we would have penmanship tests to
>use a state park, pie eating contests to drive on the public
>highways and height requirements to run for elected office. The
>code test is simply no longer relevant to operating a ham radio.

That criticism is mainly warranted. Certainly, a Morse test has
no relevance to operation in other modes. And operators of Morse
have de facto demonstrated their competence by successfully
conducting contacts in the mode. So the test has no basis as
anything other than a hazing ritual useful only as a barrier
and rationing tool.

>Ironically, these ham radio operators have been so damn pig-headed
>that the numbers of operators are in the decline and many of these
>bands are starting to look like prime auction material for the F.C.C.
>In the end, these bands will end up owned by some telecommunications
>company for wireless networking and none of us will be using them
>without paying a monthly fee to the phone company.

Now this is false. Certainly some amateurs have been pig-headed,
but fortunately a code test free Tech license has been implemented.
And since its implementation, amateur radio has grown by about
32%. Of course most of that growth has been confined to VHF+,
but that's where the greatest spectrum pressure currently exists.

HF spectrum has appeared to be reasonably safe, with non-amateur
users abandoning it, and with amateurs even gaining additional
spectrum there. However, that may be starting to change. With
the advent of robust digital modes, use of ALE techniques, and
the unique advantage of very large coverage areas for very modest
network investment, it is likely that amateur HF spectrum will come
under pressure from other users in the future. Expanding amateur
presence in this spectrum would be an excellent pre-emptive step
to forstall such spectrum grabs in the future.

And now with a no-code license, VHF frequencies sound more like C.B.
frequencies. Disgusting. Why not have a code filter? Or a physical
fitness filter, or anything else to keep boorish people on C.B. and off
our bands?

>Face it, nobody really builds their own radios any more. Look in
>the ham radio magazines and what do you see? Answer: mega-

>
The influx of poor operators since the advent of the no-code license is
staggering. I have never heard so much foul language and obnoxious
behavior on VHF before. If ham radio must transform itself into citizen's
band radio to survive, then I say let it die and let's all become CBers.
Until then, I would just as soon have the code requirement back for all
license classes. Anyone who truly wants a ham license will find that
learning the code at the required snail's pace is no barrier at all...or

am I overestimating people's abilities?

-----BEGIN PGP SIGNED MESSAGE-----

The subject of authentication and PGP-signatures has come up from
time to time, both for postings on the internet and on packet. Here
is a good reason to use PGP for something other than encrypting
messages.

My original posting, in which I said "I don't think much of burt,
but I really don't want him to be harmed" included a PGP signature,
which authenticates that it was really from me. One word, one byte,
even one bit altered would cause it to fail the CRC that is included
with the posting.

The miscreant to which I referred altered my posting, and then
followed up to it, with the wording changed to "I don't think much
of burt, I would love to see him dead but rather slowly harmed."

While most people saw right through my troll, I PGP-signed the posting,
knowing that he would try to alter it and cause some trouble. I don't
usually PGP-sign my postings. I wanted to see if he would leave the
authentication on or not. He merely deleted that part.

A missing PGP signature is only apparent if it's the custom of
the poster to always include a signature. If anyone saw just the
doctored version, they would have no way of knowing what was really
said, and what was the fraudulent part.

For what it's worth, both the original article and the doctored one
are still available on the server if you want to compare the two. The
copy that he tried to send to my postmaster was the doctored version
also. He doesn't seem to know that I'm the postmaster at one of those
sites :)

Discussion anyone? And should this be moved to .policy or somewhere
else?

Dave

>are licensed hams, or are using their equipment on the ham bands. If
>they're not licensed and/or are using their equipment outside the ham
>bands, it IS illegal.
>

That is my point, exactly. The CB group discusses the modification of amateur radio equipment more than all the other ham groups combined. And about every other post in the CB group has the title "How do you hook up an amplifier?"

1472. Special Events Station!!!

Newsgroup: rec.radio.amateur.misc

Thank-you for reading this. My name is Michael Long (KB8WPE) and I am the Public Relations Manager for the Husky Amateur Radio Club (HARC) whose callsign is W8YY. The club is located on the Michigan Technological University campus.

Starting on February 1, 6am EST, and continuing on until February 3, 6am EST, W8YY will be running a Special Events station for Michigan Tech's Winter Carnival '96. The frequencies listed below are the most likely place we will be operating. For this Special Events station we have 8"x11" certificates that would look great on anyones' wall! All you have to do is contact us and then send a QSL with a self addressed stamped envelope to receive the certificate.

Here are the frequencies:

Band Frequency Mode Time
160m 1.90 MHz LSB 8pm-8am
75m 3.90 MHz LSB 10pm-8am
40m 7.25 MHz LSB 7pm-10pm
20m 14.250 MHz USB majority of the day (8am-7pm)
17m 18.150 MHz USB if open 8am-7pm
15m 21.350 MHz USB if open 8am-7pm
10m 28.40 MHz USB if open 8am-7pm
2m 144.2 MHz USB All the time
146.58 MHz FM All the time
70cm 432.100 MHz USB All the time

Again, thank-you for reading this message and all of us here hope to here from you during the Special Events station!

For any more info. email me at cmlong@mtu.edu or the Club President, Dave Gillahan, at dmgillah@mtu.edu

You can also check out our homepage at
http://techsrv1.tech.mtu.edu:8080/harc.html
Though it is just beginning it does have a little information on it.

Sincerely,
Mike Long -KB8WPE-

Brian Kantor <brian@nothing.ucsd.edu> wrote:
>I created those alt.ham-radio newsgroups a year or more ago, and just

The entire "rec.radio.*" hierarchy has existed since 1991. The
"rec.ham-radio" hierarchy which existed before than was superseded
by the entire "rec.radio.amateur.*" sub-hierachy which was establised
as a part of the rec.radio.* reorganization (in 1991) and is fairly
complete, but as a need arises, additional groups have been added
WITHIN the rec.radio.amateur.* hierachy.

>now discovered that the newgroup messages hadn't gotten out or had been
^^^
>cancelled or something, so I resent the newgroups. I certainly didn't get
>any significant flak the first time around. ^^^^^^^^^^^^^^^^^^^^^^^^^^^^
^^

Makes sense. It didn't get out of your site, so it didn't happen.

>Good grief, it sure is different this time.

It's not any different than it was last year, OR five years ago. A
person newgrouping a single improperly planned newsgroup in the alt.*
hierarchy will get flamed... You issued 22 of them, which duplicated
existing newsgroups, didn't allow for well planned hierarchy growth
(ie: alt.radio.ham.* would have been better IF it wasn't already
duplicated) and didn't even include a "For your newsgroups file"
description line.

>I don't quite believe the degree of heat I'm getting on this; the alt

Guess what... I'm a ham radio operator. I have half of the rec.radio.*
newsgroups active in my .newsrc, and when I saw the new hierarchy, I
told my newsreader to IGNORE them. Why? Because I see no need to go
backwards in time, to a more poorly probagated hierarchy, as well as
no reason to confuse people with two separate groups/hierarchies which
will split up their usefullness.

I wonder how many other Amateur Radio Operators also dismissed your
newgroup messages.

>guidelines I'm familiar with basically say that any news admin can
>newgroup any alt group he thinks is appropriate, and other news admins
>can create the groups or not as they think fit. However, people have
>been yelling at me about 'not following the guidelines' or 'not
>notifying system administrators in advance' and a raft of other
>complaints, so maybe things have changed.

Because if you HAD brought it up for discussion in alt.config, it
would have been pointed out to you that it was duplicating an already
established set of newsgroups.

>One person explained to me at length that I'd wasted enourmous amounts
>of disk space on hundreds of thousands of news systems worldwide by
>creating empty directories - he must be running C-news or some other
>obsolete news software that creates directories before articles arrive.

This has got to be the MOST CLUELESS statement I've seen on the
net lately. You mention "inventing" NNTP, but yet you sure don't
seem to have a clue about how widely used it is. Right now, I'm
posting from a site which uses that OBSOLETE C-NEWS.

>I probably made a mistake. Sorry folks, it seemed like the right thing
>to do. I guess I'm out of touch again.

One group *might* be excusable, but come on... a whole hierarchy and you
didn't bother to check first and see if it didn't already exist?

>Sorry for the confusion folks. I guess some things have changed whilst
>I wasn't looking.

There is an FAQ posted to news.answers and several other groups every
so often. It discusses how to create newsgroups within the alt.*
hierarchy. It has been around for many years and does stress the
need to consult with alt.config even though it is not a requirement.

I don't know... call me disillusioned... not just a news admin, but
an author of NNTP did this?

I think that you should also look at where Newsline got the information. It would not suprise me at all if the F.C.C. records reflect only 10,000 upgraded hams. Since the F.C.C. records are the only ones that matter, maybe someone should look into it.

>also dumped them for the same reason.

I got rid of them for another reason: the content is pretty shallow.
Lots of stuff on movies, tv, rock music, and Stephen King, not to
mention the little kiddies with a heavy finger on the F key. The only
thing I like was their file libraries, which were quite large.

Compuserve, on the other hand, is information rich, and has the best
technical forums around anywhere.

Just do what I do: dial in with a standard terminal program, and
bypass the cim interface completely. The settings should be N71,
although I've found a setting of N81, and "strip high bit" argument
works as well. Enjoy: Compuserve is the only one of the big three
that lets you access them this way!

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited free distribution.

* SAREX TO FLY ON STS-76 *
==========
The Shuttle Amateur Radio EXperiment, or SAREX will fly again on Shuttle Mission STS-76 set for launch March 21, 1996 at 0834 UTC (3:34 AM EST) from the Kennedy Space Center, Cape Canaveral, Florida. Landing is scheduled for March 30, 1995 at 1707 UTC (12:07 AM EST) at the Kennedy Space Center, Florida. STS-76 will be a 9 day mission.

Among those in the crew who hold amateur licenses are, Astronaut Richard A. Searfoss, KC5CKM, who will serve as the Shuttle's Pilot, Mission Specialist Linda M. Godwin, N5RAX, and Ronald M. Sega, KC5ETH. The remaining crew members include Commander Kevin P. Chilton, and Mission Specialists Shannon W. Lucid (who is expected to have his amateur license by that time) and Michael R. Clifford.

STS-76 will be Linda Godwin's third shuttle flight. She used ham radio aboard the shuttle Atlantis during STS-37 in April 1991, and from aboard Endeavour during STS-59 in April 1994. Searfoss last operated SAREX from the Space Shuttle Columbia during mission STS-58 in October/November 1993. This will be his second Shuttle flight. Ronald Sega used SAREX from Discovery during the first joint US/Russian shuttle mission, STS-60, in February 1994.

During the mission, the shuttle will rendezvous and dock with the Russian Space Station Mir. Later, the shuttle will return to Earth, leaving Shannon Lucid on Mir for a 5 month stay aboard the Russian complex.

The launch will place the shuttle into Earth orbit at an altitude of 196-245 statute miles (315-394 km) and an inclination of 51.6 degrees.

During SAREX missions, the astronauts will typically make Amateur Radio scheduled contacts with schools, personal contacts with family members and random contacts with the Amateur Radio operators.

Additional STS-76 mission information can be obtained from NASA:
* NASA Spacelink computer information system (look under Spacelink.Hot.Topics)
BBS: (205) 895-0028 [VT-100, 8-N-1]
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov
Internet TCP/IP address: 192.149.89.61
* NASA Shuttle World Wide Web Home Page: http://shuttle.nasa.gov

The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

[Info via The AMSAT News Service]

* MIR NEWS *
============
1996 will be a year filled with interesting activities on the Russian space station MIR. The crew currently on-board MIR (Main Expedition ME 20) will continue the Euromir-95 program and make a third space walk (EVA) on 08-Feb-96. This EVA, originally an EVA to be executed by Russians in the interest of ESA, will now be made in the framework of Euromir-95 and one of the 2 participants will be Thomas Reiter. This became possible due to the 44 day extension of the ME-20/Euromir-95 mission. During the EVA, the Cosmonauts will retrieve the ESEF (European Science Exposure Facility), which had been installed on the outer surface of the MIR-complex by Reiter and Avdeyev on 20-Oct-95. The crew of ME-20 will be relieved by the crew of ME-21, which will include Cosmonauts Onufriyenko and Usachov. They will start with the Soyuz-TM23 on 21-Feb-96 and link up with MIR on 23-Feb-96. The ME-20/Euromir-95 crew will return to Earth in the Soyuz-TM22 on 29-Feb-96.

Other events scheduled for MIR in 1996 will be three docking missions with Space Shuttle Atlantis. Docking will occur on STS missions:

STS-76 (23-Mar-96)
STS-79 (03-Aug-96)
STS-81 (05-Dec-96)

Soyuz-TM ships will bring relief crews to the MIR space station three times in 1996. Foreigners, including a French woman and German man will be involved in two of these missions. Soyuz-TM ships will return to Earth three times with relieved crews.

During 1996, four Progress-M supply ships will link up with MIR. The last big module, Priroda, will be launched to MIR in March 1996. This will be

the fifth and final module for the MIR orbital complex.

A few days after the docking of Priroda and its redocking from the axial to a radial port, the first Atlantis docking mission will begin. During this mission, Astronauts will make an EVA and work outside the huge complex. One of the American astronauts, Shannon Lucid, will be added to the MIR crew and return to Earth by Atlantis during the second docking mission in August.

The crew of MIR-ME-21 (launch 21-Feb-96) will perform five EVAs. The following crew (ME-22), scheduled for launch on 06-Jul-96, will make four EVAs. The most spectacular operation will be during the last Atlantis mission in 1996 (STS-86). In the period in which the Atlantis is docked to the MIR complex, the freighter Progress-M34 will undock and decay in the atmosphere. One day later, the Soyuz-TM 25 with a relief crew will dock to the complex. On the following day, Atlantis will undock and return to Earth.

SB DX @ ALLBBS $OPDX.240
Ohio/Penn DX Bulletin No. 240

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 240
BID: $OPDX.240
January 29, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, ARRL Bulletins, K3DI, K8PYD, NW8F, WB8LFO, 9A3GW, DF4RD, EI6FR, F5PYI, G3SXW, G4BUE & DX NEWS SHEET, JJ2QXI, ON6TT, OZ8RO and ZS6AOO the following DX information.

5X, UGANDA (ON6TT on the road again!). Peter, ON6TT, reports he has just signed a contract with the UN again and will be leaving soon (probably this week) for 5X for 6 months to 2 years. Peter will manage the regional telecom team for UN/WFP (World Food Program). Based in 5X, Peter will move around frequently to the countries of the Rwanda (9X,9U,9Q,5H) and the Greater Horn of Africa (ST,ST0,T5,5Z,E3,ET,..). He cannot promise to be active from every single spot, but will surely try too. Peter will take with him his FT900, TL922, MFJ/DSP, PK900, R7 and his big vertical for 80/160 meters. If he has time to take down part of his station at home, he will ship his the 3 element WARC antenna and his 2 element for 40 meters. Peter states that it might take a month before he receives his 5X license (maybe shorter). His operations will be mainly SSB and RTTY, CW on request/sked. He will be on during most of the contests. QSL via his QSL Manager ON5NT. ADDED NOTE: Peter states he will continue to work hard with Bob, KK6EK and the rest of the team on the Heard '96-'97 expedition. Getting 2 months off from work to go to Heard was part of his contract negotiations ("You wanna go WHERE?!?!"). hi

8Q, MALDIVE ISLANDS. Chris, HB9CYV, and Rolf, HB9CZR, will be active from February 14-20th, probably as 8Q7YV and 8Q7ZR. Operations will be on 10-80 meters with a possibility of activity on 160 meters.

9A, CROATIA. The Croatia DX Club will take part in CQ WW 160 CW Contest as 9A1A as a Multi/Op category. Robert, 9A3GW states they have three new beverages up and are ready to use them.
Meanwhile, Dick, K4XU, should be in Zagreb (by the time you read this) for four weeks starting January 30th. He will be active as either 9A/K4XU or 9A4XU from the 9A1A club station. QSL via K4XU, Dick Frey, 2927 Curved Creek, Quincy, IL 62301, USA.

C56, THE GAMBIA. Several operators (DL2RUM, DL7BO, DL7DF, DL7UFR and DL7URH were mentioned) of Berlin/Brandenburg area will be active near the capital city of Banjul, from March 4-18th. Suggested CW frequencies will be on 1822, 3505, 7005, 10115, 14005, 18073 and 21005. SSB will be on the usual DX frequency. They plan to have two stations active. Their callsigns are not yet known. They will pay special attention to the lowbands 80/160 meters, RTTY in the BARTG Contest (March 16-17th) and if permissible, AO13 satellite and 6 meters. QSL via DL7DF (ex-DL7UUO).

DXCC FIELD CHECKING NEWS (Endorsements are here!). Jerry, WB8LFO, one of the Great Lakes (Ohio) Division's Field Representatives reports receiving a letter from the ARRL and Phase 3 of the Field Checking is starting. They can now do endorsements.

DXCC NEWS. As reported in W1AW bulletins ARLD005 and ARLD006, the "ARRL Board of Directors" (BoD) at their meeting in Savannah, Georgia, approved a Membership Services Committee recommendation to add Scarborough Reef to the ARRL DXCC Countries List. The vote was 11-yes, 3-no and 1-abstention. Scarborough is added to the list based on DXCC Rules Section II, Point 2(a) (Separation by Water). The DXCC Desk announced that the start date for Scarborough Reef is January 1, 1995. Only QSOs made on or after that date will be eligible for DXCC credit. The first accredited operation took place in April of 1995. The 1994 DXpedition did not qualify as a land based operation. QSL cards will be received by the DXCC Desk starting April 1, 1996. Cards received before that date will be returned without action.

IOTA EU-007 (EJ7NET Dates). The WestNet DX Group has announced that they will operate from The Great Blasket Island EU-007 this summer. The group will be active from Friday, June 7th, until Monday, June 10th inclusive. Activity will be on all bands 10-160 meters with operations on the following modes: CW/SSB/RTTY/AMTOR. The callsign used will be EJ7NET, and QSLs should go to EI6FR.

TU, IVORY COAST. The team of G3SXW, G4FAM, K7GE, N7BG and WB7SRW expect to be active from Ivory Coast in February, taking in the ARRL DX CW Contest on February 17-18th, signing TU5A (multi-two section). QSL via W8AEF. On February 15-16th they also hope to be active with personal call-signs (to be advised).

VK8, MELVILLE ISLAND (AUSTRALIA). This DXpedition will take place on IOTA OC-173 which is located in the Northern Territory (Arafura Sea Coast) West Group from March 8-11th. Two operators (VK8HZ and VK8NSB) and two different stations will be active at the same time on all bands from 6-80 meters. This rare IOTA is hard to get authorization to land because they need one from the Aborigen Council who owns the islands. QSL via VK4AAR direct only via 1995 or 1996 callbook address. ADDED NOTE: There was an indication that dates and callsigns could be changed...

VP2M, MONTSERRAT. Art, WA2UJH, will once again make a return trip to Montserrat as VP2MDY from February 16th through March 1st. Art will be active mostly on CW with activity on 10-160 meters. QSL via NW8F.

VP5, TURKS & CAICOS (UPDATE). As mentioned in last week's bulletin, Koji, JJ2QEH, and Mack, JJ2QXI, will be active. This week Mack has informed OPDX that they will be signing VP5/JJ2QEH and VP5/JJ2QXI from February 3-9th. They will also have 2 stations active simultaneously. They would like to emphasize picking up JAs while the conditions are open between VP5 and JA, but they still want to make as many QSOs as possible. Mack says, "PLEASE CALL US!" QSL addresses can be found in OPDX.239.

VP9, BERMUDA. Dave, N3RD, states he will activate VP9AD during the CQWW 160M CW Contest as a Single/Operator entry from Paget Parish, Bermuda. Anybody who still needs VP9AD's card can QSL to W3HNK. N3RD/VP9 may be acive sporatically before the contest.

VU2PAI QSL UPDATE. Pai, VU2PAI wants to inform the DX community that he has had problems with the Indian Excise and Customs because DXers are sending him dollar notes for direct QSL. He is not permitted to receive foreign currency this way and wanted DXers to know that he would rather have some stamps from the sender's country. This would keep him out of trouble with the government and at the same time contribute to his stamp collection. Meanwhile, Pai is active on 160 meters with a dipole but is working on new antennas at a new QTH.

ZF, CAYMAN ISLANDS. Dick, K3DI, will be active as ZF2OP in the ARRL CW Contest (February 17-18th) as a QRP entry. His band activity was not mentioned. Dick will answer QSL requests via K3DI, W3-bureau, NE USA DXcluster, or Internet (wilder@clark.net).

ZK1, SOUTH COOK ISLANDS. Leo, K8PDY, and Paul, WT8S, expect to be on Cook Island (South) February 17th and leave February 24th. "This will be an all bands operation using the same equipment WB8YJF and I took to ZL7 land", states Leo. He also hopes conditions will be better than ZL7 was. Activity will be mostly CW and RTTY with some SSB. Leo should be using the callsign ZK1PYD and Paul (who was on the Rapa Nui team last fall) should be on as ZK1WTS or possibly another call if he decides otherwise. INTERESTING NOTE: Leo states all short time non-residents have 3 letter suffix calls while residents have 2 letter suffix. They also tried for a trip to ZK1/North but the plane was booked 2 months beyond their time frame of up to late March. ADDED NOTE FROM LEO: All ZL7PYD cards not having SASE went via bureau January 19th.

ZSM6A SPECIAL PREFIX. Jim, ZS6AOO, will be operating as ZSM6A for The Soccer Cup of Africa taking place in South Africa. This station will be on the air until the middle of February. The QSL Manager is WA3HUP.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should

be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Date: Sun, 28 Jan 96 23:15:03 PST
Message-ID: <gate.sZ7FiD1w165w@GRAFex.sbay.org>
Subject: HAM-server Information

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
====================

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
=====================

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP (plus other stuff). Will dearchive PKUNZIPped files, as well as UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a utility, such as StuffIt to decode. There are also UUDECODErs and other de-archivers available. See the index for /hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==========

o If you are ordering from a ccmail system, be advised that ccmail in its default configuration attempts to automatically UUDECODE files. If your order is sent in parts, it will hiccup after the first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot contact you to let you know. Try the PING command to check that the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file for correct syntax.

o The file name has changed since the INDEX was generated. Order a new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post. Orders are only honored when sent to HAM-server@grafex.sbay.org. That's the way the software works.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email it uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I need to take care of quickly.

Kinda stretching the definition a bit . . ! ;)

[-- make me an offer I won't refuse :)

Are they operational, with good-condition antennas and crystals? If so, I'll give you $15 each, plus shipping. They are only worth anything at all to people who collect military radios, vehicles, etc -- they can't legally be used by civilians, and they use an expensive, oddball battery (rapidly!).

I was a afraid of this,,, First you try to help them out then they want
to stretch it some more.....

I am not against the NO CODE !!!!

Next they will be wanting to get RID of the WRITTEN TEST, BECAUSE they
have CANNOT MEMORIZE the QUESTION AND ANSWERS.....

Then it will be you make up your own temp CALL SIGN
Then there will be no licensing of HAM RADIO OPERATORS

NOW WE HAVE A CB like INVIREMENT

Come onNO CODE TECH's Be glad it was changed so you could at least get a
license without the CODE.... My God, My uncle got his NOVICE license
when he was 74 years old and it only took him 3 weeks to learn the code...
You cannot learn the CODe and Do all that PARTY'ing also...

The World just can't keep giving you everything you desire.. you must
work for what you want... and If you want HF you must work at it... Life
is as simple as you want to make it or as HARD as you want to make it...

No.

>The primary reason for the existence of amateur radio today is
>public service. At one time it was for experimentation and development
>of technology, but the electronic's industry has pretty well taken
>over that task.

I disagree with this almost totally. It's true that amateurs do a
bit of public service communications, and on occasion a smidgen
of emergency communications, but for the most part that's a thing
of the past. What with modern trunked public service agency communications
systems, and cellular phone, most emergency, and what used to be called
public service, communications are now handled other ways, and more
directly by the involved parties. Amateurs still have a role to play,
but as noted in the Op-Ed in the current QST, that role is more one of
a trained volunteer responder for an agency than as a communications asset.
The fact that the amateur may be able to bring an alternate communications
asset to the party is almost a perpherial side issue.

Where amateur radio maintains a unique role to play is in experimentation
and development of technology, most notably the latter. Amateurs serve
as the world's largest communications beta test organization, and they
pay for the privilege of doing it.

Dr. Rohde credits amateur radio for the advanced communications receivers
used by the military and commercial services. He says in his book on
communication receiver design that it is thanks largely to amateurs that
new improved receiver designs have been developed. He says that the
intensely high level of interference, the straining to pull out the weak
one, and the vocal critcism of receivers that don't make the grade, have
been the necessary feedback to refine receivers to the state they are today.
Now the amateurs didn't do the design, but they sure as hell did the field
testing.

Packet radio is another fairly recent example of the role of the
radio amateur. While amateurs didn't invent packet (DARPA did),
it was the work of amateurs that made packet practical and cheap.

During the Gulf War, the military bought off the shelf amateur packet TNCs for battlefield order transmission. Commercial users today use TNCs very little different from their amateur counterparts, in fact made by the same small companies, companies who got their start in the amateur marketplace. That wouldn't have been possible without the amateur pay for play role as beta tester. The companies couldn't have afforded to pay for the field testing that served to refine their products.

Today, amateurs are probing the limits of weak signal work with DSP and digital communications. Sure, NASA did it 20 years ago, with rooms full of computers and millions of dollars. But once again, as with packet, it is amateurs who are pushing down the cost envelope and who are refining the methods for mass use. Amateurs aren't slaving in silicon foundries forging the chips, but they are finding the best ways to use those chips for cheap and practical communications. They are serving once again as field testers for new algorithms and new architectures.

Public service, REACT can do that. But exploring and exploiting new technologies requires a service with more flexible rules and members who have a lust for technology's creations. That's amateur radio.

>There is nothing that gets us better PR than a headline "Hams help out
>at disaster site", and is great leverage in keeping our precious bands.

Don't kid yourself. It takes a hundred attaboys to wipe out the bad impression left by one public safety jammer, one idiot playing porno tapes over the air, one lunatic ranting and raving on 75 meters, one TVI complaint. We keep our frequencies, especially HF, because of two primary factors, 1) nobody else wants them very badly, 2) there are a lot of us, and we and our friends and families vote. If we had to survive just on the goodwill generated by helping the Red Cross canteens keep from running out of coffee and donuts thanks to our ad hoc logistic comms, we'd be history.

The general public's impression of amateur radio is of a group of fat old white men playing silly games with their radio toys, putting up unsightly (and probably dangerously cancer causing) antennas, and messing up their TV sets. The politicians would ban us in a minute if they weren't afraid we could generate enough of a backlash to throw them out of office. Public service PR may be the frosting on the cake, but the bulk of the cake is the good old grassroots numbers game that politicians understand very well.

>That being that case, let's look at a senario: Natural Disaster

And you probably shouldn't anyway, unless you have something material to contribute. The last thing needed during a disaster is yet another report that the power is out. Most amateurs should stay off the PTT during a disaster unless they have an assigned agency support role to play. And in that case, they'll assume their place in the tactical communications structure.

>VHF is great for getting stuff done locally but doesn't do
>the out of state messages to your loved ones.

True. VHF can actually be useful in a disaster, where the additional tactical communications manpower may be of some assistance. Cluttering HF with messages to Aunt Minnie and all your other out of state relatives isn't terribly useful. She can't do anything about your situation, dead or alive, right now, and by the time she could, either the phones will be working or the mail being delivered.

>So you string up a hunk of wire, lug your HF transceiver out to the garage,

>
> CW -vs- Everything Else:
>
>OPERATION:
>CW - hook up the hand key and you're ready.
>EE - unavailable: no power for the computer, TNC, CRT, disk drive, etc.

Laptops, PDAs, TNCs, etc are all happy to work off 12 volts. My HP-95 will run for weeks on a pair of AA cells, and the PicoPacket gets along just fine on a 9 volt battery.

>SOS:
>CW - recognized by every ham everywhere. If you are casually tuning the
> the band you can pick it out, it is not necessary to specifically
> "listen" for it.
>EE - someone must "listen" for it.

You're going to send SOS to tell Aunt Minnie you're fine? Please! Besides, if you *must* do H&W traffic, you'll use the nets like everybody else, or you'll put the messages on the HF forwarding BBS network, and they're *always* listening. Or you'll do as many H&W traffic handlers are doing, and uplink the message to a pacsat.

>CAPTURE:
>CW - Take 2 seconds to send, 2 seconds to recognize.
>EE - First you have to hope that your signal is strong enough for someone
> to want to bother to tune it in. Yes, digital mode has error correction
> and will get thru better than cw but you first need to link up and if
> the guy at the other end is lazy or doesn't think it is worth the effort
> he won't try. There is no way he could know you are sending an SOS.

The first assessment of the hurricane damage in the Caribean was delivered by PACTOR. There are hundreds of 24 hr digital stations listening, on well publicized frequencies, ready to accept your traffic and pass it on. Don't worry, Aunt Minnie will get the word that her leech of a nephew is still

alive and wanting to stay in the will.

>DECODING:
>CW - Ears.
>EE - must have the correct digital mode equipment to receive your signal.

True, though the right equipment works much faster and much better than
ears.

>SPECIAL EQUIPMENT:
>CW - handkey: as cheap as touching 2 bare wires together if necessary.
>EE - varies from several hundred dollars to several thousand.

The difference is between the $2000 SSB/CW transceiver and $2 hand key
and the $2000 SSB/CW transceiver and $300 worth of TU and display.
Sure, you can use a cheaper radio, but so can I because my mode can
work at a lower SNR than yours.

>AVAILABILITY:
>CW - All hams + boy scouts can copy.

Some hams and some boy scouts might have been able to copy *once*
for a test. Whether they can copy now, under pressure and under
poor conditions, is a totally different matter.

>EE - Not in every shack.

But those automatic stations are there, and they don't tense up,
they don't panic, they just patiently dig out signals you can't
copy by ear.

>Last of all, don't forget that the code requirement below 30Mhz is an
>international thing, and not something the FCC dreamed up.

Gee, do you mean that QST's lead editorial about S25 being on the
table at the next competent WARC doesn't count? Do you mean that we
don't have the right and responsibility to work to *improve* laws
and demand renegotiation of obsolete treaties? Well Ok John Henry,
if you say so, but that old steam hammer is still going to drive
you into the ground by and by. It's getting better every day,
your ears aren't.

>
>That being that case, let's look at a senario: Natural Disaster

and, just to make it more interesting, let's toss in about a dozen
twists to the scenario that make it so unrealistic as to be essentially
useless for anything more than amusement. ;-)

Before I go any further, I'll point out my conclusion:

Emergency operation does not depend in which mode you use; it depends
on how well you prepare.

Next:

If you're not prepared for an emergency, CW doesn't really help.

Now, for the fun.....

>Power knocked out. The repeater is on BBU, but that only lasts a short
>time. Also, the antenna has been damaged. The one surviving repeater
>in the area is a "closed" machine and you can't get into it with your
>handheld.

Hmmm.... when county RACES/DCS groups build repeaters, the repeaters end
up (a) located in county maintained sites with (b) the same back-up
power as the rest of the county government. Admittedly, some counties
may be lacking in terms of emergency preparedness, but I assert this
is the exception.

>This implies that your local area emergency
>VHF is great for getting stuff done locally but doesn't do
>the out of state messages to your loved ones.

No it doesn't. VHF, especially via a few repeaters, can get you to
areas where they still have power and life is essentially normal.
Sure, you can contrive a situation where this isn't the case, but that
is the exception.

>So you string up a hunk of wire, lug your HF transceiver out to the garage,
>and connect it up to the car battery.

I guess you would. I would just turn my radio on inside, since the
marine battery automatically runs everything if the AC fails. By

everything, I mean the HF and VHF radios, and the computer and TNC.

> CW -vs- Everything Else:
>
>OPERATION:
>CW - hook up the hand key and you're ready.
>EE - unavailable: no power for the computer, TNC, CRT, disk drive, etc.

I don't have to plug the hand-key in; my keyer runs on batteries and
is always hooked up anyway. However, so is the microphone.

>SOS:
>CW - recognized by every ham everywhere. If you are casually tuning the
> the band you can pick it out, it is not necessary to specifically
> "listen" for it.
>EE - someone must "listen" for it.

Excuse me? I would first tune around looking for the emergency network
on SSB and listen to see if I could be of help. If I really did have
an emergency (other than power being out), I might call "mayday".
Who needs Morse code for this? Anyway, I probably don't need help
from hams everywhere, I probably need help from local paramedics and/or
fire. Even if I did reach a ham a thousand miles away, he's no more
capable of calling my local services than I am.

>CAPTURE:
>CW - Take 2 seconds to send, 2 seconds to recognize.

> the guy at the other end is lazy or doesn't think it is worth the effort
> he won't try. There is no way he could know you are sending an SOS.

SSB: takes 2 seconds to say, 2 seconds to hear.

>DECODING:
>CW - Ears.
>EE - must have the correct digital mode equipment to receive your signal.

SSB: ears. Language isn't a barrier, since I need local help, not DX
postcards.

>SPECIAL EQUIPMENT:
>CW - handkey: as cheap as touching 2 bare wires together if necessary.
>EE - varies from several hundred dollars to several thousand.

SSB: microphone. you probably already have one.

>AVAILABILITY:
>CW - All hams + boy scouts can copy.
>EE - Not in every shack.

SSB: most HF radios do SSB and include CW. By the way, Boy Scouts are
no longer required to learn Morse code; I was told this by the group

leader of the troop that I rescued last summer.

>Last of all, don't forget that the code requirement below 30Mhz is an
>international thing, and not something the FCC dreamed up.

The Morse requirement may not be a dream, but the scenario you present certainly is. I remember the Northridge quake quite well, and CW meant virtually nothing. Local help was done by VHF radio and organized people that planned ahead.

depends on the terrain and the systems involved...florida, a little altitude can buy you a good amount of coverage since we're fairly level..and of course there's satellites...

>CW - hook up the hand key and you're ready.

or hook up the microphone...

>EE - unavailable: no power for the computer, TNC, CRT, disk drive, etc.

since most computers draw less power than the radio, if there's power for the radio, there should be power for the computer.

>SOS:
someone must always be listening if you want a distress signal to be heard.
that's why there were "watches" on specific frequencies just for that purpose.
this continues today as well (the "watch frequency" for police on telephone is 911, there's 121.5 MHz for aircraft, etc.)

>CAPTURE:
>CW - Take 2 seconds to send, 2 seconds to recognize.

after you've attracted someone's attention.

>EE - First you have to hope that your signal is strong enough for someone

the same problems here also apply to morse transmissions.

>DECODING:
>CW - Ears.

trained ears.

>EE - must have the correct digital mode equipment to receive your signal.

and what about phone?

>AVAILABILITY:
>CW - All hams + boy scouts can copy.

since we've had a code free ticket since 1991, and there's about 150,000 folks in that group, you can't say for sure that all hams can copy. you haven't been in touch with most boy scout groups if you assume that boy scouts can copy code..heck, i was the only guy in the troop that knew code back when, and the

"official" semaphore guy used the same flag position for A and H, B and I, etc.

>Last of all, don't forget that the code requirement below 30Mhz is an
>international thing, and not something the FCC dreamed up.

used to be below 144 MHz..it is something dreamed up with respect to just
what is it they want an amateur radio operator to know. and these rules
come from the dawn of "radio time".

Not sure if last add made posting. Sorry if this is a round robbin.

TWO of my personal radios forsale:
Both in very fine shape inside and out with no problems.
Both include original boxes and instruction books as received new
from AES.

YEASU ft-23r:
Includes all possible options encode /decode, mobile
charger/battery eliminator, two batteries one new, case/cover, dtmf,
two antennas, Amp 2w in/= 25 out, 140 to 163mhz coverage, speaker mic,
ect. This is my mobile rig for last four years. I have a real mobile
to take its place now.

Icom IC-24at:
Includes all options encode /decode, DTMF,
SPEAKER MIC, ONE EXTRA BATTERY NEW, DESK CHARGER/ MOBILE CHARGER,
ANT, FREQUENCY RANGE ? 120MHZ TO 1.2GHZ. I look to replace this
one with a lighted keypad dualbanders for wife and I.

PLEASE MAKE SOME REASONABLE OFFERS! I will sell to best offer by
this Friday. Or first price that trips my trigger!

Thanks
Jack Kovar

1506. Help: MS230 mini o'scope by NLS

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-28 00:00:00 UTC
From: kaboom@usit.net
Message-ID: <kaboom-2701962331380001@arcade-slip21.dynamic.usit.net>
Source record: 231583

I just acquired a Non-Linear Systems MS230 mini oscilloscope at a hamfest. The thing works, but it has an oddity I can't figure out. With the trigger set to "internal," everything works as it should. Of course, the trace goes out when the trigger is not locked. (It's supposed to do that.) When I set it to "auto," it free-runs, as it should. But, then it will not sync to a signal at all... it just continues to free-run, making the auto function useless. On all other scopes I've ever used, auto will make it free-run when unlocked, and then it reverts to a locked condition when the trigger syncs to the signal.

I went through the scope and tested and/or swapped out just about every semiconductor in it (luckily, the ICs are in sockets, and are common CMOS). Nothing helps. Poking around with my other scope turned up nothing, either. Anybody have one of these things? Is it possible it was designed that way? Anybody have a schematic for it? Please reply via email, and thanks for any help you can give me. For that matter, is NLS still in business?

Michael

I created those alt.ham-radio newsgroups a year or more ago, and just
now discovered that the newgroup messages hadn't gotten out or had been
cancelled or something, so I resent the newgroups. I certainly didn't get
any significant flak the first time around.

Good grief, it sure is different this time.

I don't quite believe the degree of heat I'm getting on this; the alt
guidelines I'm familiar with basically say that any news admin can
newgroup any alt group he thinks is appropriate, and other news admins
can create the groups or not as they think fit. However, people have

been yelling at me about 'not following the guidelines' or 'not notifying system administrators in advance' and a raft of other complaints, so maybe things have changed.

One person explained to me at length that I'd wasted enourmous amounts of disk space on hundreds of thousands of news systems worldwide by creating empty directories - he must be running C-news or some other obsolete news software that creates directories before articles arrive.

Another chastised me for "causing him all this trouble" and how we wanted to declare a "truce" because of all the work I'd caused him. I'm sorry about that, although I don't know that there was really a lot of work to be done. How much trouble can it be to edit a file and rm -rf one directory if he let the groups get created and then didn't want them?

Another argues that mailing lists are the appropriate venue. That's entirely wrong; the reason Phil and Erik and I invented NNTP was so that newsgroups and Usenet would be a cheaper and more efficient way of participating in discussions than mailing lists would be - and I believe we were and are correct in that intention. For mass distribution, better to use Usenet than a mailing list as soon as the number of interested people becomes more than some small number - a few dozen, for example.

Sure, I'll admit that the whole thing may have been a bad idea, and that I probably made a mistake. Sorry folks, it seemed like the right thing to do. I guess I'm out of touch again.

However, since someone took it upon himself to undo the newgroups with corresponding rmgroups, it's probably moot - the groups no longer exist outside our sites and no harm has been done.

Sorry for the confusion folks. I guess some things have changed whilst I wasn't looking.
- Brian

Yep... I emailed Brian a post I made to alt.config, questioning
WHY he duplicated the rec.radio.amateur.* hierarchy. The response
I got back from him was They've existed for a long time before his
newgrouping. I replied back asking him the same question once again.

I haven't gotten a response.

so, is george completely clueless or just waking up from, say, 1985?

>Face it, nobody really builds their own radios any more. Look in

not true, the stuff people build has changed. also you don't HAVE to build equipment unless you want to - it's always interesting to see people pine for the "good old days of amateur radio when there were lots of US amateur radio manufacturers" very few of which were actually investing in R&D...and so got caught leaning off base with the combination of rules changes the availability of transceivers in compact form (such as the FT-101, TS-520) and the advent of 800 numbers.

>the ham radio magazines and what do you see? Answer: mega-
>dollar ham radios.

your $2K today buys one heckuva lot more radio than it could 20 years ago. i don't think there's anywhere near as much improvement in the CB side, but then again, if there were changes, you wouldn't have those $100 CBs at radio shack..

>Ironically, these ham radio operators have been so damn pig-headed
>that the numbers of operators are in the decline and many of these

definitely clueless. he doesn't know about the roughly 150,000 new folks from 1991 on...or the recent licensing changes.

Hello all of you out there:

I am a member of the Silent News writing staff, which is a national publication for the deaf, and am always on the look out for interesting stories to write about.

Do you know of any licenced radio hams that are deaf? I do know about Courage of Minnesota, but they weren't helpful in giving me leads. If you know of such deaf hams, I may be interested in doing a write up on them.

Hope to hear from any of you and thank you very much.

>i hope you know that your posts about pins in coax, yanking down sections of towers, yada yada yada potentially
>opens you up to lega proceedings.

On what grounds? Have I ever stated that I have put pins in someone's coax, tore down someone's tower, etc? No, I have not. Have I ever instructed someone to put pins in someone's coax, tear down someone's tower, etc? No, I have not. I have merely suggested possible remedies to solve various problems that others have mentioned they're having with offending stations in their neighborhood.

Legal proceedings? Don't be ridiculous! Oh sure, I can see it now...a guy gets caught pinning someone's coax. When the judge asks him why he did it, he says "Uh, well ah, I don't like what this guy does on the radio, and some guy on the Internet suggested that I do this in order to solve the problem. So it's his fault." Yeah, right.

I'm not going to waste any more time arguing with you over something you obviously know nothing about. If you are actually foolish enough to believe that you have a case here, bring it on! Just make sure you have lots of money to pay the attorney fees on both sides of the table when your suit gets tossed out as "frivilous" and you are then countersued for the above-mentioned fees and expenses.

>give up the ticket Drew..you bring nothing to the table. BTW, I hear
Charlotte is having a jammer problem on some
>of their 2 meter repeaters...could you be misbehaving again????
>

For once, you are correct about something. We do seem to have a jammer problem, and it's on our machine. The problem was particularily bad this past weekend. In fact, it's quite a remarkable coincidence that you should mention this...especially since the "jammer" maliciously interfered with several of my transmissions and even spoke up to mention my name and call me a "moron" on one occasion. Gee, Steve, you wouldn't have anything to do with this, now would you? You have to admit, it's quite an amazing coincidence.

Hi,

I got a Yaesu FT 767 GX, with 144 Mhz unit. It's a good rig, expecially
for
the coverage of all bands.
The 2m unit works till 145.999.
My question is: how to extend till 147.999 ?
The same problem is on the other unit (430 Mhz)!

It's also possible to extend TX capabilities ?

Thanx for help in advance.

>effective!)

Sure. There are several things that will work better than that long
wire. The obvious choice is a yagi beam (available at Radio Shack).
But if you want to stick with wire, a Vee beam may be worth trying.
Just take the wire and form it into a long narrow V shape with the
open end of the V pointing toward the station you want to receive
and the feedline connected at the base of the V (break the wire
there and hook the feedline cable to the radio between the two
pieces).

This should really stir up the pot. You can legally get on the radio WITHOUT
a license. Dig into the regs and look under exparimental communications. I
think I saw it in part 95, could have been part 87. I don't recall off the top
of my head. As I recall what I read, you can put a transmitter on any band
under the exparimental clause. Your signal MUST meet the requirements set
forth, but it can be done.

I have a friend that operates that way on RC. I am too chicken to do it, but
for the last four years there has been no problem. Since we fly in the
desert she uses frequencies in the UHF GMRS band. For the most part UHF GMRS
is not used way out here. When we flew one day in the big city the RC signal
was overcome by "normal" communications on the band. Needless to say the
plane crashed. Yes all, it was a kool crash. The plane exploded on impact.

BTW, the range of the aircraft was greatly extended by using UHF GMRS. Yha,
it really sucks when you run out of fuel 2 miles away. You can get really
trick and use marine radar to track your plane to see how far it can go.
Pulling the boat to the site is a real pain, but it was sorta crazy and fun
all at the same time.

>
>I haven't gotten a response.
He has now (over in news.admin.misc I think) admitted that he had
newgrouped them -some- time ago and just learned they hadn't been created,
so he newgrouped them again. Some-one else has rmgrouped them, so their
propagation just dropped a bit (my newsgroup accepted all newsrgoup and
ignores all rmgroups, yup we have a -lot- of newsgroups here, almost 20K
worth).
This brings up, do we need any of them here in rec.radio.amateur.* I
think so, I had been planning on asking one of these days about the
interest in a vhf-uhf newsgroup (to cover FM, ATV, repeaters, weak signal
work etc) and a binaries newsgroup (I am getting tired of seeing jpegs,
and gifs in the newsrgroups)

>....we may find the figures skewed the other way from
what your numbers indicate.<

Clearly my numbers are simplistic, since I can't capture the number of licensees who "passed through" any given class, nor even the precise "starting point" of any given licensee. But even in their crude state, the numbers totally disprove the contention of Newsline that the 10% growth in Tech+ is the only "upgrade" from codeless Tech.

By the way, the effect of the switch from 5-year to 10-year license terms ended in 1994 so attrition by death/non-renewal is now part of the figures. A comparison of 1994 to 1995 figures shows high growth in every class from Novice to Extra, and in fact the "top-3" grew faster than Tech/Tech+ in 1995.

At a local ham fest yesterday I asked about this unit. The guy (not from
AES but a ham vendor) said they were supposed to be there Dec, then Jan
1st, they were supposed to be there for this show and last they are
supposed to be at a Miami show. He says they have a firmware problem the
company is trying to solve and doesn't expect the unit until March.

This is what I heard at the ham fest so take it for what it's worth.

1533. Morse code Cry Babys!!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-29 00:00:00 UTC
From: tom_boza@ccm.ch.intel.com
Message-ID: <4ej6fh$15qo@chnews.ch.intel.com>
Source record: 231360

Technically speaking, morse code communications is outdated at todays communicatios standards. However in my opion, most of the people complaining about having a morse code requirement for amateur radio are the ones who are just too lazy to learn the code. They are just looking for something for nothing and don't what to put any effort into getting a HF amateur radio license. I call these people "Cry-Babys!"

Having morse code requirements helps establish a higher standard of amateur radio operators within the amateur radio community. If you "earn" your license, you will have more "respect" for it!

I hope the FCC never does away with code requirements.

I think you missed the mark on this one Gary. While the target audience was the Ham community of WI, many others are interested in this issue. I presently live in MN and thus have no vote in WI, but I do own lake properity in WI and plan to put up a tower this year. I might also add that this information is at least worthy of the bandwidth it occupies. One doesn't have to look very far to see the *(&$#%^ postings from folks like K1OIK, KF4DDM, that have little good to offer the Ham community. There is less and less information of worth posted in the USENET Groups and it is becomming worse on a daily basis. Lets not flame posts that actually offer some information of worth.

Opinions expressed herein are my own and may not represent those of 3M.

I think you are going to be SOL as far as this hope goes. Morse is
outdated and will eventually go away.

Now, as someone setting up to take the no-code technician test, what
kind of MORON came up with the current test setup? "Here's our
300 question test pool, you can study it all you want." No wonder you
want a code test to limit the pool. The test isn't about to do it.
I could see "There will be 3 find the length questions, and 4 general
electronics, and 3 terminology, and one resistor code questions", but
this bit about here are all the questions we could possibly use is stupid.
It doesn't prove anyone knows a thing.

If you want to limit the pool why not limit it to those actually willing
to study and learn something useful?

This is where the agreement ends, I'm afraid. You just admitted that Morse code is outdated. Then, in the very next sentence, you accuse people of being "lazy" for refusing to learn that which is, in your own opinion, outdated and which they would obviously then have no use for.

> They are just looking for something for nothing and don't what to put any effort into getting a HF amateur radio license. I call these people "Cry-Babys!"

And I call you "ignorant", sir. Sounds like you're just spouting the official party line here. Where did you get your scripts from? Was it the ARRL, or did you get it from "YE OLDE FAHRTZ" at your local ham club?

>Having morse code requirements helps establish a higher standard of
>amateur radio operators within the amateur radio community. If you
>"earn" your license, you will have more "respect" for it!

Actually, I would have more "respect" for someone who realizes that Morse is an antiquated mode of communication and who therefore works to abolish it as a mandatory testing element.

>I hope the FCC never does away with code requirements.

I think you're gonna be disappointed on this one. I'd put my money on 5-10 years, and probably closer to 5.

It's nice that the FCC puts some forms online (ftp://ftp.fcc.gov/pub/Forms), but why are they using PCX bitmaps? If you try to actually print out the form you wind up with an ugly jaggy mess that's almost impossible to read. They ought to be using PostScript, or Acrobat format like the IRS. Free Acrobat readers are available for most platforms, and the printed result is as good as the original form. So close, and yet so far. Sigh...

>of the past. k

For once, I actually THOUGHT about someone's comments for quite a while before responding. It's been my impression for some years now that Gary's postings are well thought-out, intelligent, and almost always make valid points. Indeed, there are many valid points in his most recent posting, referenced in part above. I'm especially in agreement with his inference about the automated stations on HF being a prime example of excellence, insofar as their unfailing ability to exhibit patience and accuracy.

But I don't believe Gary has a good overall picture of the AMOUNT of public service that radio amateurs continue to crank out on a daily basis. And that belief of mine is based on two things:

1. The fairly large number of people I continue to come in contact with (bumped into one just yesterday) whose total and complete amateur radio lives (the term "get a life" may well apply here!) revolve around the quantity and quality of service to the public that they can perform by way of their Amateur Radio Service transmissions.

2. My ongoing understanding that there continues to be remarkably large numbers of people who are in fact well served by the 24 hour a day automated PACSATs and HF digital BBSs/MBOs that spew forth accurate and reasonably prompt amounts of third party traffic. These are very often people on board U.S. Naval vessels around the world -- who are not allowed access to naval communications circuits for the type of stuff WE normally handle -- people on commercial vessels and people on training vessels.

There are most certainly many many other situations that involve the handling of messages for the public as a SERVICE to that public, and which thus qualifies for the topic at hand. I know of SYSOPS who bellyache constantly that their systems are "clogged up" by such "trash", which usually makes me wonder what they think would be of greater value...

In any event, I don't believe that relegating public service communications to the category of "a thing of the past" is fair or accurate. Oh, it's more fair and more accurate than even a few years ago, and most CERTAINLY more fair and more accurate than 10 to 20 years ago. And those of you that know me know precisely who I blame for THAT

travesty.

So quite complaining. First you get a nice RF fingerprint of the
offending party. Then you start fingerprinting everyone you hear on
that frequency and on adjacent repeaters. Then do a comparison of
the jammers fingerprint to your database and you've got the culprits
radio. Step two is to actively DF the idiot. Once that's done have your
attornery draft up a cease and desist order and send it to the geek via
registered mail.

While the ARRL and FCC fight about who has to enforce the rules it generally
takes care of the problem.

A very good point, and that's why I always sign outgoing Usenet articles
and E-mail. You have to make it known too, of course, so that others will
recognize a message without your signature as something strange or
possibly faked.

> Discussion anyone? And should this be moved to .policy or somewhere
> else?

I wasn't aware we had a .policy group yet. :-) I'm still working on the
RFD, the CFV will take another month or two, I'm afraid.

I don't think that's what they were saying. The headline said
most Techs are remaining Techs, that is true. Where the residue
is going is subject to debate. They may be passing through
Tech+ or jumping directly to higher classes.

>By the way, the effect of the switch from 5-year to 10-year
>license terms ended in 1994 so attrition by death/non-renewal
>is now part of the figures.

Nope, because of the 2 year grace period, 1994 expires are
just *now* starting to be purged. We had this discussion
earlier about a grandfather who died shortly after being
licensed in May of 1984 still on the FCC database as an
active amateur. He won't be purged from the list until
May of 1996.

>A comparison of 1994 to 1995
>figures shows high growth in every class from Novice to Extra,
>and in fact the "top-3" grew faster than Tech/Tech+ in 1995.

Yeah, but that's still misleading. Since the top three are all
much smaller classes than the two Techs, percentage growth looks
lots better than the raw number growth. Try expressing the growth
of each class as a percentage of the *total* amateur population.
That gives a more meaningful picture of where amateurs are and
where they are going.

Being able to set distribution is possible with virtually all properly functioning usenet newsreaders. If your provider doesn't know how (as opposed to can't be bothered to lead you through it) he shouldn't be imitating a service provider.

>>I have seen many post from Gary in the past ALL of which was
>very informative. I guess that he was having a bad

>Gary.... this is internet not ham packet radio !

GC seems to realize that just fine, although you don't. Any properly configured newsreader ought to allow you to set the distribution header.

It's not the reader's fault if the service provider hasn't set it up that way, of course, but the reader should nag his provider to do so.

Using the distribution header properly is a GOOD way to reduce unnecessary costs to the overall network.

No my boy, this is *usenet*, not internet or packet radio.
As a fully participating usenet site for many many years,
I tell you now that netnews articles have a header, and
that header has a Distribution line. If your lame software
hides that header from you, that's a problem you need
to address with your software provider and your site manager.

If your lame software hides the header, I'll reproduce the one for
this message here in the body text so you can see it.

Now *that's* what a netnews header looks like. Every article
generates one. See that line labeled "Distribution:" up there?
That's your distribution line. If you leave it blank, the default
is "world", but if you put a local or regional code in there,
the distribution will be limited to that area.

It matters not one whit whether usenet is carried over internet,
uucp, packet radio, or two tin cans and a string. The *news*

software requires that header, and it's on every message.

Guess what? I own a private club. Its on 441.750+ in the Providence, RI
area. You're not invited, and the FCC says that it is perfectly legal
for me to keep you out.

>Second point: the belief that a "code filter" keeps lids off of HF is

You passed a code test too. All these examples show is we need to do
away with the multiple-guess give-away code examination and go back to
a fill-in-the-blank test.

1553. Antenna Modeling Software for Windows

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-29 00:00:00 UTC
From: flanders@znet.GroupZ.net
Message-ID: <flanders.117.0096B906@znet.GroupZ.net>
Source record: 231380

There is a neat "try-before-buy" package of antenna modeling software
for windows available at

http://www.funet.fi/pub/ham/antenna/NEC/

the file is NEC-WIN.ZIP

It is about 1.3 megs, so it takes awhile to download.

I just got it recently, and have only started evaluating it. If someone
else has already looked it over, I would appreciate hearing from you.
I had been looking for a way to visualize the output of the generic
mininec3. At first glance, this package looks like a lot more than I was
hoping for.

: Nope, because of the 2 year grace period, 1994 expires are
: just *now* starting to be purged. We had this discussion
: earlier about a grandfather who died shortly after being
: licensed in May of 1984 still on the FCC database as an
: active amateur. He won't be purged from the list until
: May of 1996.

Definitely correct. My Elmer had his license up for renewal in March of 1994. Since he did not renew, and was always an active ham, I can only come to the sad conclusion that he is a SK, since I have not been back to MI since 1989. I will be watching to see if his callsign is purged by April.

: Yeah, but that's still misleading. Since the top three are all
: much smaller classes than the two Techs, percentage growth looks
: lots better than the raw number growth. Try expressing the growth
: of each class as a percentage of the *total* amateur population.
: That gives a more meaningful picture of where amateurs are and
: where they are going.

As treasurer of our local club, I have been asked to update my membership database with the license class of each member. When I have finished, I will post a summary here. As might be expected, most of our growth is in the no-code Tech class. But last weekend, one of our 15-year-old members passed the Extra theory exam, and completed all requirements for that license. His friend and classmate has his General, and is studying toward Advanced. These two young fellows provided some needed inspiration to our club president and myself; we are working on Advanced and Extra, respectively. Neither of us have any excuse, as the young guys were limited in the amount of study time, due to homework from school. I have been sitting on Advanced since 1968.

We do have five students in our General license class, and other members are studying for their upgrades independently. So, interest in CW and HF is not dead here.

Wrong again. Modification of CB radios is legal, but it invalidates
the type acceptance of the radio making it illegal to *use* it once
modified on the Citizen's Band.

Quite correct, Gary. However, while the distribution line is evident when I use the tin newsreader on my shell account with Netcom, I do not recall seeing one on my other Internet account, where I use the Netscape 2.0 beta for reading netnews. It must be there, though. I can see where it might be easily overlooked, and where newcomers to usenet might not be aware of its presence.

A question, though. I can limit distribution to CA, but is it even possible to limit distribution to WI? Not sure if individual states will work, other than CA.

The original example shows a case in which distribution to a limited area is a good idea. But then, it seems to me that most posts to the ham newsgroups are rarely regional in nature. That is the reason that I hate to see posts where the originator requests an e-mail reply. In many cases, others can also benefit from seeing the answer posted "out in the open."

Just my 2 cents worth,

In response to John Wilkerson:
Phil Karn's calculations appear to be correct. But unfortunately, in the context of defending the no-code issue, those calculations solve a different problem than the one under discussion!

While it can be demonstrated there are modes more "efficient" than cw, the task is to show that eliminating the Morse Code, and easing requirements in general for the theory exams, will benefit the Amateur Service. Those anxious to eliminate Morse Code would do well to first see how it will impact other activities in the Service. Those interested in easing theory requirements into the hobby would do well to ponder whether they seek a personal radio service, or Amateur Radio.

Greetings to all

I would appreciate it if any body could point me to a web site that contains
the following: Title 47 chapter 1 subchapter D part 95.
The above is the Code of Federal Regulations relating to general moblie radios.
It also contains the rules for CB radios. I have searchd serval web sites
including Cornell Law School's website. I would like to download part 95 of
the regulations in its entireity.

A footnote to this request. It sure is easy to find part 97 which is the rules for amatuer radios. Their must be a lot of ham operators on the internet.

Please help if you can. Thanks in advance.

1564. Special Events Station!!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-29 00:00:00 UTC
From: cmlong@mtu.edu
Message-ID: <4ek1nu$ftl@techsrv1.tech>
Source record: 231391

Thank-you for reading this. My name is Michael Long (KB8WPE) and I am the Public Relations Manager for the Husky Amateur Radio Club (HARC) whose callsign is W8YY. The club is located on the Michigan Technological University campus.

Starting on February 1, 6am EST, and continuing on until February 3, 6am EST, W8YY will be running a Special Events station for Michigan Tech's Winter Carnival '96. The frequencies listed below are the most likely place we will be operating. For this Special Events station we have 8"x11" certificates that would look great on anyones' wall! All you have to do is contact us and then send a QSL with a self addressed stamped envelope to receive the certificate.

Here are the frequencies:

Band Frequency Mode Time
160m 1.90 MHz LSB 8pm-8am
75m 3.90 MHz LSB 10pm-8am
40m 7.25 MHz LSB 7pm-10pm
20m 14.250 MHz USB majority of the day (8am-7pm)
17m 18.150 MHz USB if open 8am-7pm
15m 21.350 MHz USB if open 8am-7pm
10m 28.40 MHz USB if open 8am-7pm
2m 144.2 MHz USB All the time
146.58 MHz FM All the time
70cm 432.100 MHz USB All the time

Again, thank-you for reading this message and all of us here hope to here from you during the Special Events station!

For any more info. email me at cmlong@mtu.edu or the Club President, Dave Gillahan, at dmgillah@mtu.edu

You can also check out our homepage at
http://techsrv1.tech.mtu.edu:8080/harc.html
Though it is just beginning it does have a little information on it.

Sincerely,
Mike Long -KB8WPE-

JP>spent the money to get it new, and I would get hosed in a trade.

JP>John
JP>AB5OX

John, interesting. Do you have any feel for the IC-2000H? I didn't do a
lot of comparing before I bought it, but it seems to do a pretty good
job with intermod. I'm still struggling with a high SWR on my Larsen
dual band on glass KG2-70 antenna so I've not been able to really
test the 2000H much. As you may know the 2000H has wideband receive
and if you believe the ads is very good at rejecting intermod. I
thought they made the same claim for the 2700. VY 73, Mike WA8JDW

Drew, why is it whenever someone mentions destroying other peoples' property, your right there in the middle of
it??

i hope you know that your posts about pins in coax, yanking down sections of towers, yada yada yada potentially
opens you up to lega proceedings. If someone wanted to make a case against you, all they'd have to do it keep
copies of your posts concerning the pinning of coax, etc and no matter who did the damage, they could hold you
accountable. whether or not you could be convicted is another matter, but it sure as hell cost you bucks.

it's a shame that some many of YOU have these attitudes. Maybe if the shoe is on the other foot.....

just remember...be careful what you say, you never know who your audience is

Anyone can modify ham equipment after it is initially sold. Once
commercially manufactured ham gear has been sold, anyone can modify
it and anyone can use it EXCEPT transmission must be done
by a licensed ham.

>our bands?

First of all, the amateur bands do not belong to you. You are not a king, dictator, or emperor...therefore, you have no authority to "keep boorish people on C.B. and off our bands?" If you want to operate a private club and limit access to those whom you personally find "acceptable", start a country club. Not on publicly-owned radio frequencies.

Second point: the belief that a "code filter" keeps lids off of HF is simply nonsense and a poor excuse for continued exclusion of some amateurs from frequencies below 30Mhz. If you are convinced that Morse is an effective lid filter, tune up on 75-meters or 14.313 on any given night and listen for awhile. The childish antics, malicious interference, constant arguments, and filthy language you hear there on a nightly basis will make CB Channel 19 look like a Sunday School picnic by comparison.

discussion of the replacement of paper with electronic media is going on in the techwriter list (techwr-l) right now too. sometimes you need to spread out the schematic, installation interconnects, parts layout, etc. on a table. there's no display system that is available at low to reasonable cost that can do that trick.

lack of a standard way to distribute the information is a problem too. Adobe Acrobat, for example, is available only for a few machine types. SGML looks promising but tends to need muscle in the viewer..etc.

A license to operate on the amateur bands is *not* a license to do as one wishes; there *are* FCC rules. I am happy to share the public airwaves with anyone who behaves decently, but I don't want to share the bands with bootleggers, jammers, lids and Beavis and Buttheads any more than I want to share the public roads with drunken drivers. Any prophylactic measure--even one as feeble as a code requirement--is welcome in my book.

No, I'm not Queen of the Airwaves, Dictatrix of the Dial, but it is a sorry state of affairs when I can't even trust local 2-meter operators to give me a clean-cut demo QSO for the high school kids I know who want to get licensed. It is worse than it once was on VHF, and as part of the public who owns the airwaves, I have a right to complain.

BTW, you are certainly on the mark about some of those 75 m groups.

Why not have a techology filter? In fact, why have a filter at all? The
answer is alluded to by your next paragraph.

>>Face it, nobody really builds their own radios any more. Look in
>>the ham radio magazines and what do you see? Answer: mega-
>>dollar ham radios. This is the only difference between a ham radio
>>operator and a C.B. radio operator.
>It seems to me that hams behaved with more decorum...or at least they used
>to.

It is that *everybody* used to behave with more decorum, until decorum and
politeness gave way to PCism and everybody's right to say whatever they
want, whenver they want, dammit!

This is a general societal problem (and ham radio is more or less a
microcosm of society). The problem isn't solved by simply having a lid
filter. Besides -- no filter is perfect. Remember Murphy's Third Law:
Foolproof systems give rise to more clever fools.

>>If this attitude were pervasive, we would have penmanship tests to
>>use a state park, pie eating contests to drive on the public
>>highways and height requirements to run for elected office. The
>>code test is simply no longer relevant to operating a ham radio.
>your analogies are shaky at best.

Maybe, maybe not. It remains to be seen (just ask over in
rec.radio.amateur.policy someday) exactly what benefit, if any, continued
Morse training has for the Amateur Radio Service.

>The influx of poor operators since the advent of the no-code license is

>license classes. Anyone who truly wants a ham license will find that

>learning the code at the required snail's pace is no barrier at all...or
>am I overestimating people's abilities?

No, but if you're simply in a mood to create artificial barriers, make them *good* ones. How about jumping out of an empty oil barrel? Or ditch-digging (Gary KE4ZV's favorite)? Let's really make it a good one: each license applicant must successfully lobby the FCC to turn one of our UHF+ allocations into "amateur exclusive".

As for the lack of good operators, there has also been a lack of good elmering, especially by the W#xxx and K#xxx calls from days of old who look down their noses at the new licensees. Some attitude adjustment is called for all around.

> -Paul, N9AZ

Yep, I have seen in hardware stores (most recently the one I work in) a
wrinkle-finish spray paint available in both black and gray. I think
it's made by Zynolyte--I'll check at work tomorrow. Most of your better
hardware stores with a *large* spray paint selection should have this
stuff. Spray on, re-coat if necessary within 15 minutes, wrinkle finish
shows up after about four hours of dry time. Try Eagle Hardware & Garden
if you have one nearby, otherwise try Home Depot or Builder's Square.
I'll look into it for further details. And yes, I work in the paint
department. :-)

I enjoy DXing and especially DX contesting. Having been on both sides of the pileup, I can say that I have formed a definite opinion on QSL'ing. It's mine only, so flame away:

I QSL 100% for every card received, and QSL 100% to every request, if made over the air whether a contest or not. It burns me up when I work a stateside station, looking for a new state, county or other wallpaper, and the guy doesnt send me a card---especially if I send him one first.

No, I've never taken "greenstamps" or IRC's. This is part of the ham responsibility...kinda like elmering a new ham, helping a neighbor solve RF interference, etc. It's just good manners. I guess some DX'ers do it -- shame shame shame on them. Postage isnt so expensive, and many of my cards go via the bureau too.

Any ham who is too cheap to mail out a postcard for stateside contacts is not worth havinga QSO in the first place (sure...some cant afford it. For those who can-- is the bureau THAT expensive....5 bucks a pound? c'mon guys). Isn't half the fun getting that little 5 by 7 envelope? If a guy asks...why not send him a card, especially an HF qso.

To the guy who wont QSL to "another W6 on 20" I say phooey on you. You have probably not QSL'd in a while...if you had, you'd know that it doesnt cost 32 cents for a QSL post-card; As a new operator, I loved getting cards...didnt care where they were from; Just liked the different card designs and short message on the back. Plus, it turned a corner of the bedroom into a "real shack". Remember, just because you've received you umpteenth W6 QSL card doesnt mean the guy on the other end has gotten his umpteenth W? card. Also, some guys dont have monster antennas. In fact, some of the newcomers these days are lucky to work any DX at all on 15 or 10. With the low sunspots, a card from ANYWHERE can be an inspiration to keep trying. I still cherish that first QSL card ever received. It just happened to be from my first QSO ever. Perhaps the face of ham radio is changing.

Ok. off the soap box. QSL via the bureau. dit dit Joe BV/N0IAT up 2

I am planning tospend my next holdays in southern/mid
norway and I want to take my 144/430 HT with me.

Is there a reciprocal licensing agreement (CEPT) between Norway
and Germany ?
If not, where can I ge a guest licence from ?

Can someone send me a list of 144/440 (FM phone) repeaters ?

>in *every message header*. It's just good nettiquette.

Actually, many people in any local area might miss postings with
limited distributions because their access is via an entity that
has a non-local site address. Many examples come to mind
such as all those on AOL, Prodigy, Compuserve, etc.
There is but one local internet reference for prodigy.com
and yet (wherever that may be) prodigy.com serves users
throughout the USA (world?). Likewise many other
providers, be they actual Internet Providers or perhaps
a major corporation (eg. say ibm.com) will be identifiable
as a single site location (a single gateway to that domain)
yet there may be users anywhere in the world.

Not meant as a flame, just a clarification.

Additionally, many people travel a great deal and may
like to know that a hamfest will be going on when
they visit a particular area, so if I were sending a post
announcing such an event, I sure wouldn't limit distribution
to anything less than USA, for the reasons just stated.

I am using the JPS NIR-10. I feel it is a nice addition to SSB operating, especially the automatic notch filtering. As of yet, I have not upgraded to the newest software, so it may perform better than it does now. My rig (YAESU FT1000D) already has excellent CW filtering, and I seldom use the DSP in CW mode. Although it is beneficial for SSB operations, I am not convinced that it is worth the price. I feel the same goes for all the DSP units, not just the NIR-10. I hope this info is helpful to you. 73 -- Jamey (Jay) Brookover, WB8BMV -- Cary NC

: >lay almost horizontal in any wind. It won't just hover straight
: >overhead, so it's difficult to get much altitude this way. Now
: >consider all that wire laying out over the countryside, unless
: >you're in an incredibly rural area, it will find a power line.
: >Your estate may have to pay for any damages incurred by the grid.

I don't think so. Our club has put up balloons for several years. The
balloon dose stay overhead, and as with ANY flight, you are subject to
weather restrictions. To take 500 feet of number 14 gauge wire, you need
a 350 lbs lift capacity. That is just for the wire. Now you have your
tether, 1/4" steel cable. Once again 500+ feet is going to be 3000 to
5000 lbs of lift required. As you can see, hot air is not going to cut
it!

For some reason everyone is thinking Wagner is stupid. We have talked in
mail about this in the past. I think that he has a good idea, and with a
lot of planing his club will do just fine.

: >If you want to use a tethered balloon, you need a blimp-like balloon
: >with aero surfaces that can be set to cause it to *rise* into the
: >wind. These can successfully be used to obtain reasonable heights.
: >Balloon advertising companies can be a source of these, fair warning,
: >they aren't cheap.

: >And don't even *think* of tethering a balloon with 2000 or more
: >feet of wire unless you are *miles* from the nearest power line,
: >and maybe not even then. Think what would happen if the tether

: >or at least you need a positive way to make sure that if it

: >breaks it breaks at the balloon and not down near the ground.
: >That'll limit the distance from the tether site where the
: >wire will be a hazard.

: Hi John,
: Gary raises some valid safety concerns that I agree with, but I don't think
: you need to consider anything that high(2000'). A half wave at 160
: meters guesstimates out to about 270'. With a proper counterpoise you
: could probably get by with a 1/4 wave (135'). I don't know where your
: located, but here in Wisconsin it gets reasonably calm after sundown
: which is when the 160 meter band would be coming alive. Although, above
: 500' anything goes night or day as far as wind. In other words, if you keep
: your balloon below 500' you shouldn't have any wind problems after dark.

: I'm not sure how much height the FAA will allow you. A quick call to
: the local flight service station might get you some clarification. A
: tower need not be lighted if its under 200'. They might allow you more
: on a one time notification basis.

As with any flight of aircraft, clearance will be required. After dark
flight will require proper lighting. The reason for the lighting is that
ultra light aircraft do not have a minimum HAAT requirement. Therefor may
fly below 200 feet day or night. If you are doing field day in a rural
area, that is prime fly space for ultra light aircraft.

Remeber here folks, just because it's a balloon dose not mean that it is
exempt from FAA law. It is considered a flight of aircraft. A tower for
example never moves, and is not considered a flight of aircraft.

: My Field day partner and I considered a balloon based vertical for 80 meters.
: We had kind of decided to use a 1/2 wave with 1/2 wave on the ground for
: a counterpoise. We thought we might get some directivity by moving the
: counterpoise. We also thought we'd feed it with coax terminated in clips
: so we could adjust the length of it on the fly. Again, keeping it below 200'
: should avoid any hassle with FAA rules providing your far enough away from
: your local airport.

: A group of hams in southern Wisconsin has been launching balloons with
: small repeaters and ATV for several years. I'll try to get you a callsign
: of somebody envolved.

: Good Topic, 73
: Fred WU9R

Since this thread is talking about flight try this one on. We built a
model rocket. Took a HT, WX monitor (modified pocket type), and a TNC.
Programed the thing up and launched it. We got WX reports every 10
seconds after engin burn out. The first launch went to about 480 feet
near as we could tell. No problem. The second launch with 6 rocket
engins went to over 1200 feet near as we could tell. Needless to say
my friends and I have not heard the end of it yet.

So, who else out there flies model rockets and airplanes? How about ultra lights? Is there anyone out there that would like to put together some tests? I would like to find someone that dose ATV to build up a system to go on board our next project. It's a 12 foot model rocket, 5 inch diamiter. Two small stages with 6 engins each. We are hopeing for 5000 with this one. We would like to see ham radio cargo, either ATV or packet. We should be launching in April 1996. This is a model aero club located in the AV. We are just a bunch of tech type freeks with nothing better to do with our time.

Many thanks my friend who ever you are. I am curious to know who "Grove" is that you mention. Could you comment on this? I am in the Two-way radio service business and have need of this blocked range of frequencies to monitor for interference . I thought for a while I was going to have to resort to a R9000 which is awfully expensive. Again many thanks. I would like to hear from you here or on my E-Mail chinkle@exis.net

What's your point, really, Vince? Are you trying to say:

"Any reduction in the Morse code requirements inherently eases the
requirements for written exams."

Is this the basis of your assertions? If not, we really can discuss
Morse and written requirements independently.

Now you're getting it Vince.

the task is to show that eliminating the Morse Code,
and easing requirements in general for the theory exams, will
:>benefit the Amateur Service.

I have not seen anyone suggest eliminating the code requirement and easing the theory exams. In fact, just the opposite - eliminate the code requirement and increase the difficulty of the theory exams.

1605. R7100 Modification

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-30 00:00:00 UTC
From: .
Message-ID: <4ejqb8$6e5@news.ios.com>
Source record: 231416
Cross-posted to: uk.radio.amateur,rec.radio.shortwave,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner,alt.radio.scanner,alt.radio.scanner.uk

Ever since ICOM decided to delete the 800 - 900 MHZ coverage from its IC-R7100 receiver,
older R7100's demand premium prices on the used market. ICOM insisted that the R7100 was
now made in two versions, one for the general public and another (with 800-900 coverage) for
government and law enforcement agencies. The extended coverage version also sells for $200-$300 more! Per discussions with ICOM there were very clear that this was done to comply with
legal requirements that prohibit new scanners from be capable of receiving cellular telephone
transmissions. My opposition has always been why we should be penalized if we want to listen to
local law enforcement agencies within the 800 MHz band. Personally, I have no interest in
listening to cell phones when a receiver as competent as the R7100 opens up almost 2 ghz of
spectrum.

I recently noticed that Grove now offers the R7100 with "restored" coverage so I set out to find
out how it was done. Performing the following procedure will allow you to listen to local law
enforcement with the 800-900 mHz portion of the spectrum. Remove the screws that hold the top
cover and disconnect the speaker. Next, remove the two flat head screws that hold the metal
shield covering the rear of the front panel.. On the rear apron, remove the two screws that hold
the upper chassis to the lower chassis. Finally, remove the antenna cable that is connected to the
circuit board assembly in the rear right corner of the R7100. Referring to the owners manual,
CAREFULLY separate the upper half of the receiver, inverting it, setting it beside the radio as
illustrated in the owners manual. Be careful not to pull on the cables that connect the upper
portion to the lower half of the radio. In the front of the owners manual there is a small paragraph
that explains the various jumper options for the R7100's CI-V interface options. It's on this board
that the modification is done. The board is located behind the "M-SET" switch. The jumpers are

actually circular pads, split vertically. A drop of solder constitutes a jumper - no solder = no
jumper.

Locate jumper "A6" as illustrated in the owners manual. Above "A6" you'll see a small ball of
solder. Using solder wick, CAREFULLY remove the solder, exposing the split circular pad
beneath. The space between the pads is very small so be sure to remove all the solder. Reassemble
the radio and you're done!

Don't underestimate this inbred little group, Hans. It has one
of the higher readerships on usenet. I recall QST saying 41%
of ARRL members have access, and there are a lot of non-ARRL
members here too. However, you're right, we shouldn't neglect
our ARRL officials. They *are* a small inbred group that doesn't
seem to get out much (with a few notable exceptions), and probably
need to be addressed by snail mail and telephone (or perhaps
smoke signals and jungle drums).

Nor should we ignore this subject in our on the air contacts,
at our club meetings, and at hamfest forums. This really can
be a major turning point in amateur radio. We need to get
organized now. It won't hurt to contact our elected government
officials either, it's an election year after all.

Gary

I would say YES. At least one every quarter. For us beginners (no code TECHS)
it would be a great way to work some DX and other countries. The bands would
be full with contesters looking to make a CQ.

Absolutely not. Basically the person with the strongest uplink
wins at the expense of everyone else. Although the transponders
may be 100-200 kHz wide, they have a fixed power budget and
operate in a linear fashion. As a result several strong signals
would dominate the transponder and push everyone else's signals
into the mud. Aren't there enough contests already?

Well, if they're shutting it off during the period 11:30 pm to 6 am, then the channel pair is obviously available for another repeater to operate during that period. Put one up. It's not hard to build a repeater; you might even be able to buy one. And it will certainly make its point. You can hardly be accused of interfering with a repeater that is shut off, can you?

Here in San Diego, some years ago, one of the local repeater barons made a point of shutting off his repeater whenever he didn't like what was being said on it. His privilege, entirely. However, another repeater soon was in operation on the pair, with an output sensing receiver - if the primary repeater didn't come up within 1.5 seconds of the input being activated, the secondary repeater did. Most people got the hang of waiting two seconds before speaking right quick.

This is one of the few social problems that can be solved by technology.

In response to Bill DuBroff:
I have seen both cases: those pushing for no-code as well as no-theory, and a few pushing for both. Fred Maia, a VEC "giant," said at Dayton in 1989, "we have to make the (theory) exams easier so that women and children can pass them." It is thus incorrect to say that no one is pushing for easier theory requirements, and the progression that inevitably follows.

The key for hams is to secure a restoring of code and/or theory exams (theory would have a higher priority, but both would be beneficial), before agreeing to easing requirements in any other direction. Otherwise, one comes to the inescapable (and correct) conclusion that there's a movement to ease requirements into the Service, period. Note carefully also there are others who are questioning the value of exams in general, right on this discussion group, so again, one cannot declare "no one is pushing for easier theory requirements."

The problem with the eased requirement scenario is that it has yet to be shown that eased requirements would be beneficial to the Amateur Service. If Part 97.1 is to remain a viable component of the Amateur Service, easing of requirements does not fit in. If, on the other hand, ARRL and FCC wish to declare the new purpose and goals of the Amateur Service, it would be more professional of them to do it now, and get on with rebuilding a new Service. In that way, at least, no one operates under false pretenses. The new challenge then becomes justifying one's frequency allocations under the new rules of the game.

Regards,
Vince, WB2EZG

:>
:>Technically speaking, morse code communications is outdated at
;>todays communicatios standards.

So, why keep outdated stuff?

However in my opion, most of the people complaining about having a morse code requirement for amateur radio are the ones who are just too lazy to learn the code. They are just looking for something for nothing and don't what to put any effort into getting a HF amateur radio license. I call these people "Cry-Babys!"

I for one know code, but that does not mean that I think it should be a requirement. By the way, I also don't think one should demonstrate the ability to ride a horse as a prerequisite to getting a driver's license.

Bill, KF4ECX

They already "limit" the "pool" with the code. Those that don't want to
learn code don't get their licence at that level. You say that code is
outdated, but then again HF is outdated in some respects.

1621. This sickening NO-Code Debate!

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-30 00:00:00 UTC
From: murso@fnalv1.fnal.gov
Message-ID: <4elqs7$jpe@fnnews.fnal.gov>
Source record: 231432

Once you have committed yourself to becoming an amateur, which DOES take a Committment, I would think that that meant you wanted to be part of the hobby and want to learn. This no-code debate is really getting, (has been), a pretty dull fight. Arguing the merits of CW is pointless since the FCC cannot get rid of the requirement till at least 1998/9. The current treaty requires a code knowledge. If you don't want to learn, then be content with VHF & UHF.

If you can learn the silly questions, (very few really know the content anymore), you can learn the code. It just takes time. Those of us brought up in the tube type era heard the same complaints back in the late 60's. It didn't do much good then and I doubt it will now. If you don't like the rules of the game, then don't play it. There are better, faster, more accurate methods of communicating, true. There is not a simpler method. In many parts of Europe CW is the best method due to the S-9 and above noise levels in many countries. Many of the European countries also have a rather small phone band. With the density of operation, CW does a much better job.

Changing the rules (preparing for flames) is a typical Democrats way of operating in this case. Give us everything. We shouldn't have to WORK for it either. You guys are just looking for ham radio Welfare. It isn't here.

Mike KB9KFE (retread and still learning)

A35 - [Kingdom of Tonga] A35RK will be QRV , between Feb.20 to March.20
, from Tonga.Modes of operation will be CW and RTTY , some SSB op.
are expected (Hi).Paul is going there in business.Operations times
are : 1700-1900Z and 0500-0900Z . NO OPERATION ON 160m.
Some IOTA operations from there :
Tongatapu group OC-049
Ha'apai group OC-169
Vava'u group OC-064
Paul's new QSL Route is : (Direct to) W7TSQ, Robert Preston, 809
Cary Road, Edmonds, WA 98020 USA.
DO NOT send cards to KK6H , W6 Bureau or A3 Bureau.
FT8 - [Crozet,Kerguelen,Amsterdam] FR5HR is on Reunion Isl. waiting for
a boat to take him to this 3 Islands.His departure is scheduled
for February 12th.It's first stop over will be on Crozet for 8 to
10 days.
GU_160m - [Guernsey Isl.] The Club station GU3HFN (Guernsey ARS HQ) will be
QRV for the CQ 160m Contest.The cndx are not very good to put a
strong signal on the air but anyway GU is QRV on 160m. :-)
QSL via bureau, or direct to :Guernsey ARS GU3HFN, P. O. Box 100,
GUERNSEY GY1 3EL, via UK.
HI8 - [Dominican Republic] DF5WA is QRV as DF5WA/HI8 till Feb 6th.He's
in Juan Dolio.Operation modes are SSB/CW and RTTY in all bands ,
QSL via DF5WA, Berthold Faisst, Hegelstr. 3, D-55122 Mainz ,
Germany.
J7 - [Dominica] As reported in the last issue some US operators went to
this country . The callsign received for this DXpedition was J77A
```

and QSL goes via K0SN.(see #10 for more info)
V31 - [Belize] NS0B (Alan) will be for the second time in Belize for the
ARRL DX CW Contest in February.This will be a 3 person effort :
NS0B , WC0W and WG9L.The arrival on Belize is scheduled to Feb 14th
and departure for Feb 19th.They will concentrate mainly on the
contest , wich means CW but some SSB activity may happen, probably
starting Thursday after 1800 UTC, 160-10 meters (no WARC bands!).
The callsign for this Dxpedition is V31EV but each operator will
use his own call outside the contest : V31EV(NS0B),V31TP(WC0W) and
WG9L is waiting for his call.QSL to the contest call via NS0B ,
for non-contest calls QSL via op's home call.
Any info , request it to Alan at : Internet: albraun@socketis.net
Packet: NS0B@N0LBA.#cemo.mo.usa.noam.
VP5 - [Turks & Caicos Isl.] K8JP will be QRV from this country as
VP5/K8JP from 11 to 19 Feb 96.He has plans to operate from Salt Cay
(NA-003) with Jodi (VP5JM) , also QRV in the ARRL DX CW Contest
wityh call VP5JP.QSL to Joe's new address : Joe Pontek, K8JP,
P. O. Box 59573, Schaumburg, IL 60159-0573, U.S.A.
XV - [Vietnam] From Feb 9 to 15, JA3UB, JR3MVF and JH3GRE will visit
the club station in Ho-chi-minh city.They will be QRV from 160 to
6 meters SSB/CW + WARC bands.The Callsign and QSL route will be
announced later.Send sched/request to JH3GRE's FAX at :
81+727-22-5959.
ZY - [Brasil] From Feb 4th. to 13th. PY3CEJ is QRV from Furado Island ,
DIB-062 , as ZY3CEJ.Operation in SSB/CW on all bands.QSL via
PY3CEJ.
Also from Paz Island (IOTA SA027, DIB 063 and SC 01) , Callsign
not known.From 26th to 28th Jan. QRV from 10-80m.QSL via PP5LL.

SB DXNEWS @ WW <CT1ENQ $NPDX.011W2
NPDXG Bulletin #11 [2/4]

R0/UR8LV -> This station is operating from many places like : Andreja Isl.,
Bolshoj Isl., Russkij Isl., Prawdy Isl. and many other , right now is on
Mys Cheljuskin.QSL Manager is UR7LD , via the bureau or to his QSL address :
Box 9909, Kharkiv 310070, Ukraine.

Info from PS7KM -> Karl Leite (PS7KM) is the QSL Manager for the following
Brazilian stations :

For Fernando de Noronha Island, PY0F:
- ZY0FK, FKL, FMC, FCM, FA, FCA, FMN, FRT, FZB
- PY0FK, FA
For Trindade Island, PY0T:
- ZY0TK, TC, TR, TF, TO
- PY0TK
For Saint Peter & Saint Paul Rocks, PY0S:
- ZY0SS, SK, SP, SY, SW
- PY0SK, PY0SR
For Rocas Atoll, PY0R:
- ZY0RK

- PY0RK
Special calls:
- ZW7KM

Karl will answer to replies until Jan 97 after that day he will "destroy" the logs ! Send QSL request to : PS7KM (PSE SASE >1 GreenStamp).Don't write callsigns on the envelope.

PY QSL info -> JH2MRA (ex-PY operator) has received some QSL's from the PY Bureau when he visited PY land last August , but he does not receive more QSL's to his PY operations from the Brazilian Bureau so send your QSLs to JH2MRA (Bureau or Direct).His operations were: PY3ZYM/PY0F, PS7ZNA/PY0F PY0ZFB, PY0ZFF, PQ1J, CE0Y/JH2MRA, CE0Y/JR2AIU.

Info from CT1FAK -> Rui (CT1FAK) is a very active station on the Oscar Birds he his QRV from Ilhavo [IN50QO] . His QSL address is not on the Callbook but you can send QSL via CT1GY (His Father) wich is on the Callbook ! Rui is very active on VHF and he listens to the VHF net on HF , call for him or send a msg to CT1FAK@CT1EDY.CTAV.PRT.EU if you want to have a sked for EME , AO-13 , etc.

VU2PAI QSL -> Pai had problems the Indian E. Customs all due to the famous greenstamps that he receives in his QSL cards.So he asks to stop sending dollars and to send some foreign stamps for his collection (Some local stamps from your country, Hi!).He is also improving his new QTh for 160m operation.

D2TT & D3T QSL's are OUT ! -> Peter (ON6TT) has received the QSL's from the printer.ON5NT (Peter's Manager) is mailing the QSL's. [D3T July/Aug 95 op.]

ZW0C QLS's -> ZW0C was the callsign used by the "Teresinha DX Group" in their DXpedition from Caju Island (Brazil) , IOTA SA-072 and DIB-17.The QSLs for this operation will be available from Feb 5th. , as it seems is going to be beautiful QSL card.QSL for ZW0C and ZW0X via PS8DX (Junior).
Operation from ZW0C was in Nov. 1995.

VP8CSA QSL's -> Dieter (DL1SDN) stills waiting for the logs from Mark , VP8CSA.He has sent the logs twice but they got lost in the way to DL ! The QSL is already printed (A simple one because the photos got lost too) and Dieter will start sending the QSLs as soon as Mark returns in Feb.96.

Portuguese Castels Award -> CT1FMX was QRV as CR5FMX from "Fortaleza de Peniche" (Ref. F-031).Operation bands from 10 to 80 mtrs.QSL via CT1FMX , Bureau or Direct to : Jorge , P.O.Box 189 , 2562 Torres Vedras , Portugal.

##
The Awards Corner
/\
Calgary Stampede City Award
/\#/\

Rules: Obtain 10 points by contacting Calgary Amateurs on any band/mode from Jan1/1962. ONLY Log information required. Available to SWL's. The following stations VE6AO, VE6NQ (CLUB STNS) and Life members of our club: VE6AP, VE6GQ (sk), VE6MX, VE6RH, VE6RQ, VE6SA, VE6VK, VE6VO, VE7DE AND VE7OK each count TWO points. Other Calgary stations count 1 point each.
Send log information to Award Manager: Russ.A.Wilson,VE6VK, 1235 Richland Road N.E. Calgary, AB. Canada. T2E 5M5. Cost of award is $3 U/S. (Return postage is included so not much profit for our club) This is a very nice award. It is a colored picture of a chuckwagon race at the Calgary Exhibition and Stampede. Four white horses pulling the chuckwagon. I am usually listening on 14260 so if I can help by phoning some local stations I will be pleased to do so....73...Russ. (VE6VK)

Gary,
Your header has the Distribution: line in it
Mine does not.
Nor do I see it on any messages from you using the pine header display
option

I'm glad that I learned something today BUT
I'm here in Kansas City Mo
qni.com <in Kansas City Mo> my provider gets the news from
suba.com and they are in Chicago Il

I dont believe that local/regional postings for Kansas City would get to me..
or would they ?

How about trying one ?

I am using the pine mail reader 3.91

With your experiance in usenet where do I enable this feature ?

I did call my provider and did a LITTLE research but I guess it was not
enough....

Thanks for all of your help

Test Equipment For Sale

Tektronix 5103N Dual Beam Rack Mount Oscilloscope System
-Two 5A18N Dual Trace Amplifiers
-5B10N Time Base/Amplifier
-Complete Instruction Manuals
Used very little and never abused.
$250 plus Shipping or Best Offer

Tektronix FG504 40 Megahertz Function Generator
-Mounted in TM503 Power Module
Slightly more "well used" than scope, but good working condition
$75 plus Shipping or Best Offer

Respond to: jwcercis@aol.com

Thanks,
Mill

I also say NO to contest on any of the birds

Todd,
You are right about the downlink power budget
I have heard may stations on ao-13 who were several DB LOUDER than the beacon
I have also seen the effects of a strong signal on other weaker signals..
Last year I and others tried to work a station who we could just barely hear
I listened to others who attempted to work that staion with little
luck. That station could not hear them . Their signals on the downlink
side were 4-4 and right up there with
the beacon. that station could not hear then. I doubt if he could even
copy his own dowlink signal
Another station came up I'll bet he was at leat 8 - 12 db stronger
than the beacon since he was about 3 s-units more than the beacon was

He made his contact and then that was all he could do was brag to
the other station about how good he was :->
needles to say I then let him know about his bad operating practice !

What can we do about that ??

>My license will expire in July, so I'll need to send in a renewal 610
>form. Where can one get a copy, and when is an appropriate time to
>fill it out and mail it to the FCC?

My license expires in April and I just received a form in the mail
from the FCC for renewal. It was not a 610, all I had to do was sign
it and mail it back as long as there were no changes to be made to the
license.
I assume they are automatically sending these out. You can request
a 610 by calling the FCC's Consumer Assistance Branch at 800-322-1117.

>
>We do have five students in our General license class, and other members are
>studying for their upgrades independently. So, interest in CW and HF is not
>dead here.

Well, interest in advancing through the ranks is not dead. Whether that
indicates a genuine interest in CW or whether it means CW is just another
barrier to overcome in meeting a different motivation is a separate matter.
It could be that they want to avoid the crap some higher class licensees
have been heaping on them (or not). Maybe they want to get on the good
HF phone frequencies, or operate HF digital. It's hard to say what their
motivation is, but it needn't be an interest in CW per se (though of course
it could be).

In any event, it certainly isn't a bad thing for an amateur to be
learning and advancing his skills. That's what he's supposed to do
continously over his entire ham career. It seems a pity that so
many think that learning must stop when the exams are passed. Just
because you haven't bothered to gather in that Extra wallpaper, does
that mean you haven't been learning and honing your skills since 1968?
I hope not.

"Cry-Babys!"

Some called the pilgrams cry babies.

>Having morse code requirements helps establish a higher standard of
>amateur radio operators within the amateur radio community. If you
>"earn" your license, you will have more "respect" for it!

I agree, you should have to earn your license. The current tests are a joke.
If a test were given that forced one to reason, half the current hams would
have never received a licence. Those would be the half that are always saying
" memorize the study guide, memorize the Morse code". I have a computer
sitting on my desk that can do both very well. should we give it a license?

>I hope the FCC never does away with code requirements.

This is the USA, you are entitled to your opinion and have the right to
voice it like every one else and that is something worth celebrating.

> any reference here to check the ITU plan differences between zone
> 1,2, and 3.

Here's the UK band plan. It's true for the whole of region 1 if
(i) you remember than 160m allocations vary within region 1, and
(ii) you ignore references to (UK) novice sub-bands

Also, bandplans are *voluntary* in the UK, unlike the situation
in the USA where bandplans are enforced by the Ts and Cs of the
license.

> the key sequence is for this mod?

If it's anything like my FT-5200, just connect the antenna and
switch it on. You'll hear plenty of out-of-band signals, and as
an added bonus you won't even have to move the tuning knob!

But seriously folks...

Sorry about the lousy English, this is as I received it from
the now-defunct Yaesu Europe BV office in Amsterdam:

"Please make jumper on the INTERFACE unit as following which
jumper are freeband for the FT-5200 and it should be need
programming frequency.

On the interface unit jumper position JP5001-JP5007 as
following:

JP5001, JP5002, JP5003, JP5006 and JP5007 ..... Short
JP5004 and JP5005 .... Open

Please note: Free band frequency range are approx following.

For VHF: RX 110 - 180 MHz TX 130 - 180 MHz
For UHF: RX 330 - 480 MHz TX 425 - 465 MHz

Programming Frequency:

Please push and keep "D/MR", "F/W" and "REV" button while
power switch on. Now programming frequency for VHF low edge
of RX, high edge of RX, low edge of TX and high edge of TX,
then UHF frequency programming same as low edge of RX, high
edge of RX ... high edge of TX"

So now you know! :-)

1643. interference question

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-30 00:00:00 UTC
From: jco@convex.com
Message-ID: <4em0vk$9g6@orion.convex.com>
Source record: 231504

I am looking for interference that I have on 20M. I have a carrier every 65.646 KHz. This one HZ number is the result of averaging many measurements.

The signal is receiver independent, found on both an IC-738 and SB-101.

The signal is strongest on 20M, S-9, but I can find it, though very faint, on 40M.

The signal is a clean CW carrier and seems to be very stable in frequency.

The signal strength is time of day independent. The source must be something local.

The signal is strongest by using the outside vertical. A short wire in the shack, close to the computers, has an appropriate attenuation of the interference for an inside antenna.

Does anyone recognize the frequency?

Next is DFing it. Knowing what I might be looking for may help.

John KN5L

What I meant was that modifying a CB is illegal if you plan on using it on the cb band. If you use it for 10m or something in the ham bands then it is not illegal. What the guy was saying at first that modifying all radios is illegal. It is not illegal to modify a scanner either but using it to listen to unauthorized bands, ie cellular, is illegal.

: Take it from the ex-co-ordinator of the NY,NJ,Ct areas. There is
: NO room for another 2 meter repeater in N.J. !

: no kidding.
: -be

Yhep, sounds like the L.A. area too. :-)

If you want lots of space, try the 1200 MHz band. All over the U.S. there are lots of frequencies ready to go. I just got a used 1200 radio for less money then a 2 meter used radio! That was kool.

Source record: 231510

First, just to set the record straight, I agree that
the technician license is by far the fastest growing
class, and I am absolutely DELIGHTED at it's popularity.
My original post was simply to point out a blatant error
(or worse) in Bill Pasternak's editorial on Newsline. Here
is a direct quote:

"In other words, in the five years since no-code
licensing was introduced, only 10,000 or so no-coders
have bothered to upgrade. The rest, about 150,000
no-code Techs appear to be very content to live out
their ham radio lives on a local repeater using what
the Amateur Radio supply industry has come to call a
2 meter ham station on a belt clip."

He based this solely on the growth of the Tech+ by
10,000 licensees. He ignores the growth of the "top-3"
by over 46,000 licenses which obviously includes folks
from the Tech ranks.
By the way, for proof that FCC figures in 1994 and later
DO account for expirations, look at the numbers on page
40 of the May 95 QST.

01 Feb Normal Normal Normal
02 Feb Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
30 Jan 2

Observed Australian Regional MUFs:
Townsville: Near predicted monthly values with 20-30%
depressions 11-13 UT. Sporadic E obscured the F region
00-02, 10 UT and strong sporadic E was observed 03, 12
and 15 UT.
Sydney: No data after 13 UT. Near predicted monthly
values. Sporadic E obscured the F region 00-05 and 10-11
UT. At Canberra after 13 UT frequencies were near
predicted monthly values.
Hobart: Depressed 15-30% 00-09, 11-16 UT and near predicted
monthly values at 10, 20-23 UT. Sporadic E obscured the F
region 17-19 UT and spread F was observed 14-15 UT.
Darwin: No data.

Predicted Monthly T index for January: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
31 Jan 10 Near predicted monthly values with sporadic E
likely at all latitudes.
01 Feb 10 Near predicted monthly values with sporadic E
likely at all latitudes.
02 Feb 10 Near predicted monthly values with sporadic E
likely at all latitudes.
COMMENT: IPS HF Communications Warning 4 was issued on 29 January
and is current for interval 30 January to 2 February.
Sporadic E may disrupt or degrade F layer communications at times.

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: In any event, it certainly isn't a bad thing for an amateur to be
: learning and advancing his skills. That's what he's supposed to do
: *continously* over his entire ham career. It seems a pity that so
: many think that learning must stop when the exams are passed. Just
: because you haven't bothered to gather in that Extra wallpaper, does
: that mean you haven't been learning and honing your skills since 1968?
: I hope not.

Definitely not. I actually came by my formal education in electronics after 1968. Thanks to eight years in the Air Force, where I spent most of the first year in school 30 hours a week learning basic electronics and radar principles, then spending the next seven years maintaining and supervising the installation of air traffic control radar systems. All it would have taken was a quick trip over to New Orleans to the FCC office, plus a brush-up on the code and study of the license guide for the materials I didnt already know. I have no excuse for not having been an Extra for several years now.

I am currently studying the ARRL Extra Class License Guide from cover to cover, even though a couple of the OT Extras at the local club have advocated just memorizing the test pool questions. Pride in being formerly involved in electronics technology just will not let me be a memorizer.

The first time I saw an article critical of those who do not upgrade beyond the no-code ranks, it disturbed me. In 1966, there was not much going on above 30 mHz, but today there is a lot more to being a Tech than yakking on FM. But your point made me realize that the ham tradition encourages us to advance the state of the art, which implies advancing our own skills.

Jim - KF6CR

In article <4elp81$6h7@zeus.ieee.org>, v.biancomano@ieee.org says...

;>I have seen both cases: those pushing for no-code as well
;>as no-theory, and a few pushing for both. Fred Maia, a VEC
;>"giant," said at Dayton in 1989, "we have to make the (theory)
;>exams easier so that women and children can pass them." It is
;>thus incorrect to say that no one is pushing for easier theory
;>requirements, and the progression that inevitably follows.

Not too good Vince when you have to go back 7 years to find someone who pushed for easier exams. As for this net, I have seen nobody in the current time period that has pushed for no-code and easier exams.

;>The problem with the eased requirement scenario is that it
;>has yet to be shown that eased requirements would be
;>beneficial to the Amateur Service. If Part 97.1 is to
;>remain a viable component of the Amateur Service,;
;>easing of requirements does not fit in.

As for being beneficial, it will never be "shown" until it is tested, which gets down to the feeling of the majority that it is or is not beneficial, and that feeling should control - the practioners (as defined as a majority) of the hobby should define the boundary conditions, not the FCC or any single person or group. With respect to 97.1, you claim but have no evidence that no-code would reduce its thrust. Your declaration is not adequate.

>
>Pardon me, but this is dangerous as hell except in rather special
>circumstances. In the first place, a tethered weather balloon will
>lay almost horizontal in any wind. It won't just hover straight

I've used a balloon tethered with wire for field day to make a 160
m antenna and it was a real bust. THe balloon was the biggest I
could find (10' diam) and you have to go get the He to pump it up.
Unless there was absolutely NO breeze at all the thing lay flat
on the ground for most of the length of wire and this was the
finest wire I could find. A 10' balloon has a lot of trouble
holding up this length of wire, much less tethers as well - Ican't
remember what we used for tethers.
There's no way you could put an HT up there even.
It sounded a great idea. I agree with everything Gary says.
We hadn't thought about the thing getting loose and dragging
across power lines.

1656. FS: KPC-2 TNC and 145.01 Base

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-30 00:00:00 UTC
From: "Robert J. Hall" <rjhall@mtu.edu>
Message-ID: <Pine.SUN.3.91.960130030917.18389D-100000@techsrv1.tech.mtu.edu>
Source record: 231517
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap,rec.radio.amateur.digital.misc

Hello .. I have decided to sell my KPC-2 Packet radio TNC and
Regency BTH-201B 25 Watt VHF Tranceiver crystalled to 145.01 MHZ.

I am asking $70 for the KPC-2 ALONE.
The KPC-2 With the REGENCY BTH-201B radio I am asking $135
I will also be asking $5 for Shipping.

The Regency base station is all ready to go and is Currently wired and
working well with the KPC-2. The base station has it's own built in
Power supply. Size is approx. (15" x 9" x 3.5") Regency BTH-201B 25 Watt
VHF Tranceiver crystalled to 145.01 MHZ. Receiver sensitivity and
selectivity has been recently checked on a 2400 Motorola Service Monitor
and checked up to factory specs. Output power bench checked at 30 watts.

I am not interested in selling the radio seperate from the TNC, but would
be interested in selling the TNC alone. If I don't sell them I'll
continue to use them, and If I don't sell the radio with it, I'll crystal
it for voice and use it there.

The KPC-2 has version 2.85 firmware and has PBBS, NODE, and DIGI
functions. It's run well for the last 4 years without ever having a
problem. It originally cost $170. I orginally purchased the Regency
about 2 years ago from a friend for $60 and recrystaled and tuned it for
another $30 from Jan Crystals. It works well and also has never given me
any problems.

I don't normally have time to monitor the news groups so any response to
this should be via e-mail or phone listed below.

Just a quick note from another dissatisfied IC-2700H owner. I'll likely never buy Icom again due to this terrible radio they stuck me with. Summary of gripes:

1) Terrible intermod on all frequencies, both bands.
2) Bad design of control head. Where small PCBs that hold the knobs connects to the display PCB, high failure rate during cold weather (and I live in California, where cold weather means less than 60 deg F)
3) Crossband repeater has such bad squelch crashes (independant of squelch settings) it's unusable.

Hi,

does anybody know the new SSTV-program WINPIX PRO by Don, K0HEO?
Any experiences good or bad?

This program is supposed to run under Windows 3.1 or 95 together with any
Windows-compatible soundcard. No further Hardware is necessary.

Any reports about it?

Dead wrong. There's as much building going on now as ever. For instance, my 30m/40m HF receiver/transmitter are about to go on the air on 40m. 30m will be added shortly. 100% homebrew. The RX works great, I'm still working the bugs out of the TX. It doesn't have dual VFO or 500 memories, but who REALLY needs those anyway?

> Ironically, these ham radio operators have been so damn pig-headed
> that the numbers of operators are in the decline and many of these

The following is a QST

The FCC giveth and the FCC taketh away once again. Also, the FCC
plays catch-up on ham licensing and who is in and who is out in the
ARRL's top leadership. Find out on an expanded Newsline report number
963 coming your way right now!

(*****
FCC PROPOSES TO SUSPEND AMATEUR USE OF 76-77 GHZ

The FCC says that it wants to strip Amateur Radio from temporary use
of one of its microwave bands to permit further experimentation with vehicle locating systems. In a Second Notice of Proposed Rulemaking in ET Docket 94-124, issued just before the Federal shutdown in mid-December, the Federal Communications Commission has proposed amending Part 97 of its rules to temporarily disallow amateur use of the 76-77 GHz band," which the FCC hopes to open for commercial development along with other "millimeter wave" frequency bands above 40 GHz.
The band in question is part of the 75.5 to 81 GHz allocation, which
the amateur and amateur satellite services share with other users on a primary basis from 75.5-76 GHz, and on a secondary basis from 76-81 GHz. The primary allocation of 76-81 GHz is assigned to radiolocation, including radar. The commission says the change will permit development of Part 15 vehicle radar systems in the 76-77 GHz band that could be used in conjunction with Intelligent Transportation Systems. The FCC says that restricting amateur use of 76-77 GHz will prevent potential interference to these developing systems.
The NPRM says the temporary restriction could be relaxed if it can be
shown that other in-band transmissions would not compromise vehicle radar system safety or if sharing guidelines can be worked out. The FCC says it will revisit the issue within five years.
At the same time, the FCC has also acted to balance any perceived harm to amateur operators as mandated under federal law. It proposes to upgrade amateur status in the 77.5-78 GHz band from secondary to co-primary with government and non-government radiolocation services. This, the FCC says, will ensure that amateur access to spectrum near 77 GHz is maintained without the threat of preemption by higher priority services.

(*****
FCC LICENSE CATCH-UP

The Federal Communications Commission reports it is making good progress on processing a backlog of more than 2800 ham radio license applications filed electronically after it re-opened following the latest government shutdown. The commission was back on the job again January 16, in the wake of the month-long shutdown begun by the budget impasse and extended by bad weather and a Federal holiday after it first reopened for a day January on 11th. A spokesman said the FCC expects to be up to date with electronically filed applications for new and updated licenses by the time this newscast goes to air.

(*****
ARRL ELECTIONS

Rod Stafford, KB6ZV of San Jose, California has been elected as President of the American Radio Relay League by a vote of the organizations Board of Directors. Stafford has been serving as ARRL

president since last summer when former president George Wilson, W4OYI, stepped down to concentrate on rehabilitation from a severe stroke suffered in February of last year.
The decision to elect Stafford for a full term as ARRL President is

seen as a major vote of confidence in his ability to lead the League and the United States Amateur Radio Service toward the next century.
The board of directors also elected Directors Hugh Turnbull, W3ABC as 3rd Vice President, Joel Harrison, WB5IGF, as 2nd Vice President and Steve Mendelsohn, WA2DHF to the 1st Vice Presidents post.

(*****
NO MORE LOCAL COURTS

A group of hams who say that they are fed up with lawyers using civil courts to litigate ham radio disputes are demanding that the FCC declare all such activities legally invalid. The Committee For Federal Preemption of Civil Ham Radio Litigation says that it wants the FCC to issue a declaratory ruling that bars states, cities and other municipalities form hearing cases that in any way involve ham radio communications.
The Albany, Georgia based group points to ham versus ham cases in California, Florida, Texas and New Jersey as the basis for its decision to act. It says that it will file a formal request to the FCC within the next week asking that the statement of federal preemption be issued.
The committee is also setting up a home page on the World Wide Web to
accept what it calls, valid complaints against lawyers who advise hams to sue other hams in civil court. These they say will be referred as formal complaints to the bar associations of the states in which attorneys seeking these cases have their practice.

(*****
ATTORNEY-HAM CITES OHIO ARREST AS POSSIBLE WARNING

Speaking of hams who are lawyers, one who appears to be giving good

advice is Ron Pretekin, AB8K, of Dayton, Ohio. In the wake of the December arrest of a Moraine, Ohio, CBer for causing TVI at his neighbor's apartment, Ron says that hams should take note of what such problems ultimately can lead to.
According to the new electronic edition of the ARRL Letter, Pretekin points to an article in the Dayton Daily News describing the circumstances under which the CBer, Steven Holbrook, wound up in jail on a third-degree felony charge. According to the report, Holbrook and the neighbor had feuded over the problem for several months. His arrest came after the neighbor tape-recorded Holbrook's CB chatter as it came over his TV. The newspaper said the conversation included profanity and threats against the neighbor.
As previously reported, if convicted, Holbrook faces a maximum $5000

fine and 10 years in jail.

(*****
RF PROOF CLOTHING

Jim Sullivan, N7TCF reports via the VHF Reflector that a company called ShieldWorks is selling rf-proof clothing, mainly the microwaves. Some of the claims may be borderline, but Jim says that apparently this company has provided such clothing to the military and radio industry.
Jim adds that you can find more information about ShieldWorks by taking to the word-wide-web adding that he is passing this information along because of what he calls the unfounded fear that RF could seriously impact on the fun side of Amateur Radio.

(*****
JOSEPH MERDLER N6AHU, S.K.

Bill Pasternak, WA6ITF:

"For me, the most difficult part of my job is to write the epitaph of a member of our community who has gone to his or her final reward. It's far harder when the person I am writing about happens to be someone I have been close friend of for over two decades. This is one of those cases. I will do my best.
On Wednesday, January 17th, former Newsline legal reporter Joseph Merdler, N6AHU, died of an apparent heart attack at his home in North Hollywood, California. Joe was a lawyer by profession and was part of the Newsline family almost since its inception in the 1976. This, when we were still known as the Westlink Radio Network.
Joe came to national prominence in the late 70's and early 80's for

his work in combating malicious interference and the use of vile language on our bands through political action. He even traveled to Washington to teach the American Radio Relay League how to deal with the legislators on Capitol Hill. And in 1980, the Dayton Amateur Radio Association recognized his accomplishments by honoring him with its Special Achievement Award.
Joe was hard at work and taking his anti malicious interference message nationwide when he suffered his first heart attack in the mid-1980's. His doctors told him that he would have to cut back and change his life style if he wanted to live. He took their advice, to some degree, but there was no way for him to walk completely away from his chosen responsibilities. He often told me that to do so would be like not living at all.
So Joe cut back on the number of hours that he worked. He lost weight and even put ham radio politics somewhat on the back burner. But Joe's health continued to fail. Even so, he still attended the

1991 Dayton Hamvention. He loved the Hamvention and the people of Dayton, but immediately following the close of the Hamvention '91, Joe admitted himself to the Cleveland Clinic for evaluation. It was a

move that literally saved his life.
The Cardiac Care specialists found that Joe had developed an aneurysm on his heart that was ready to burst. They operated and it was a partial success. His life was spared for the moment, but we all knew that he was living on borrowed time.
I guess that knowing that your time on earth is limited does change

you. It did Joe. He came home from Cleveland a quieter and more loving person. Not somber. Quite the opposite. He relished every moment of every day and his dedication to his friends and family, and even to ham radio, was totally renewed.
I wish I had the time to tell you of all of Joe's accomplishments.

I don't. But I do want to share the reason that Joe was so driven in his war against the purveyors of dirty words on our ham radio airwaves. It was a small incident that took place in 1978.
He was in his car with his then young daughter and turned on his two
meter radio. Immediately out of the speaker came forth a savage tirade of foul language that was without doubt legally obscene. He told me that his daughter looked at him and asked: "Dad, is this what your ham radio is all about?" From that day, until the day he died, Joe Merdler, N6AHU devoted his ham radio life to fostering decency on the air.
I guess that it is apropos that in the last conversation that Joe and I had, I was able to tell him about a Supreme Court decision that upheld the FCC's ban on the broadcast of indecent language. A decision that we both saw as opening the door to renewed enforcement of laws barring legally indecent languages in all services. Perhaps even on the ham bands.
And maybe that is what this epitaph is really all about. The simple
story of a decent man who devoted much of his adult life to making our hobby of amateur radio a decent place where kids of all ages can play. That by itself is well worth remembering.
A long time ago, Joe made me promise that if I ever had to write an

obituary about him, that it would not be maudlin. He wanted it to be up beat, and hopefully, I have lived up to that request.
Joe was 60 years old and had just bought his airline tickets for his
annual trip to the Hamvention. But god called him to come home instead. He is survived by his wife Margot, N6QFU, by his thousands of friends around the world and by this writer whose life he touched in an almost magical way.
73 Joe. I will never forget you."

This reporter joins with Bill and the rest of the ham radio community
in offering our condolences to Joe's family.

DARE BENEFIT

The third annual Ham Radio and Computer Flea Market to benefit Lancaster, New Hampshires' North County DARE Program takes place on Sunday, March 2nd. Sponsored jointly by the Twin Mountain Amateur Radio Club and Littleton Amateur Radio Club, the event will be held at the Twin Mountain Town Hall. For more information please contact Richard Force WB1ASL at his callbook address.

(*****
MIR HAM STATION FAILURE

If you are wondering about the lack of ham radio activity from the Russian Mir space station, Dr. Thomas Reiter DF4TR has some answers. Dr. Reiter is aboard the Mir orbital complex and says that the power supply used for some of the Amateur radio equipment on Mir has failed. An old power supply has been installed, but it is only capable of handling the old Icom transceiver and one TNC.
Dr. Reiter says that the Digital Voice Module has also failed. Because of this, there will be no more automatic voice recordings in the near future. And if that was not enough, all four fuses in the two connected transceivers blew, and only two spare fuses are left to run the remaining gear.

(*****
SURF-SAT LAUNCHED

An experimental satellite that has a lot of interest in it by radio

amateurs is on the air from space. Its called Surfsat One.

A satellite payload designed and built by college students has been

successfully launched from Vandenberg Air Force Base, California, aboard a NASA launch vehicle. Now in orbit 746 miles above Earth, Surfsat-1 rode piggy-back on the upper stage launch vehicle for Radarsat, a Canadian satellite.
Surfsat carries low power radio transmitters which send in three microwave bands to NASA tracking stations. It will be used for deep space communication research and development, and also will be used to test a new set of Earth orbit tracking stations.
The student project was initiated at NASA's Jet Propulsion Laboratory in 1987 as part of the Summer Undergraduate Research Fellowship program of the California Institute of Technology.

While Surfsat is not a ham radio satellite it has drawn a lot of interest from radio amateurs because of the educational nature of the project.

(*****
SOUTH AFRICAN BULLETIN SERVICE

From overseas, word that the South African Radio League invites all

the worlds radio amateurs to listen to their ham radio bulletin program known as Amateur Radio Mirror International. The 55 minute weekly program is filled with up to date ham radio news from the African continent along with interviews, technical features and lots of ham radio related talk.
Amateur Radio Mirror International is broadcast every Sunday at 10:00 hours and Monday at 2000 hours South Africa Standard Time on 7.205 MHz and on Mondays at 2000 hours South African Standard Time. It's also simulcast on Mondays at 20:00 hours on 3.215 MHz as well These transmissions are sponsored by Sentech which is the common carrier group for broadcasting in South Africa along with support from South Africa Telecom which provides transmission lines for the service.

(*****
ZL BEACON

And the VHF Reflector reports that New Zealand's ZB2VHF beacon is temporarily off air for an overhaul. When work is complete it will be relocated at a new site. Its owner, Jimmy Bruzon, ZB2BL says he will notify everyone when it is returned to service.

(*****
DX

In DX, word that the mid-winter 6 meter DX openings are continuing and they are not limited to the northern hemisphere. Reports from Australia tell of extended 50 Mhz propagation on January 13th with stations from all Australian States plus the Australian Capital Territory have been heard and worked in New Zealand. Australians also report hearing Japanese stations but as of yet, nothing from the United States.

YHOTY '96 NOMINATIONS SOUGHT

A reminder that the nominating period for 1996 "Young Ham of the Year Award" is now open. Originally known as the "Westlink Report Young Ham of the Year," this award program, now entering its second decade, is presented annually to a United States licensed Radio Amateur who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby service.
All nominations must be submitted before June 30, 1996 on an official application. Application forms are available by sending a self addressed stamped envelope mailed to the:

Young Ham of the Year Award
c/o Newsline
28197 Robin Avenue
Saugus, California
91350

These nominating applications are also available for electronic download from several sites that provide Newsline materials over the World Wide Web and from the general interest ham radio files area on GEnie and America Online.

(*****
GATES TRAVEL

The San Francisco Chronicle reports that Microsofts' Bill Gates, who
has almost $13 billion, and Warren Buffett, who has close to $11 billion, are said to be planning a trip together. The two may rent a train and travel the length and breadth of China. Must be nice.

>: software requires that header, and it's on every message.
>
>I really don't think the distribution field works any more on anything but
>a uucp connection. It is really broken on todays well connected net.

It's not "broken" if you understand what it means. It does not mean "do not propagate this message outside the area". It means "the content of this message is of local interest only." A USENET site outside the area that wants info about the area is free to pick it up if it wants. Even back in old UUCP-mostly days, lots of Bay Area sites picked up the Boston and Massachusetts distributions just to get the restaurant chatter, since so many people in the computer industry are likely to spend some time in the Boston area. These days, since propagation over the Internet is so cheap, many sites decide to simply pick up all distributions on the off chance that somebody wants to see it. It's still useful as kill file fodder for users, though.

BTW, Gary is wrong on a detail [this happens two or three times a year]. Distribution: isn't a required header, it's optional. The spec is Internet RFC 850. RFCs are available in many places around the net, one I know offhand is ftp from gatekeeper.dec.com in /pub/net/info/rfc.

Gentlement PLEASE!

There has been more than enough bickering for my tastes on BOTH rec.radio.cb and rec.radio.amateur.misc - is this stuff being crossposted on purpose? As a form of entertainment for some sick twisted minds? These messages that constantly bog down constructive ideas are being shown blasting fellow hams and blaming the fallen feelings on the CB'er crew in general.

Why us? Whos' suggesting the ideas SPAMMED on two newsgroups? If you folks have got a problem, take it elsewhere! Or leave it here. Talk about channel 19 - YIKES!

You folks set a good example...Thank you very much!

I really appreciate NOT being a HAM operator - and every time I see messages like these here with the Subject header...makes me wonder how any of you got past the FCC certification in the first place - let alone the VEs'!!!

GOSH DARN IT!
Sorry folks - I had to say something - I'm getting tired of wasting filespace on my drive just to download arguements over petty details. Duplicates are one thing, argements are another. I don't like seeing people demanding such respect and the public scrutiny as what I've been witnessing on the rec.radio.cb and here on your newsgroup at the same time. It does not look favorable to anyone - including myself. So, what am I? Just another person that is getting nervous. I speak for myself, no one else.

Thank you for your time.
Good Luck!

Well if that is the sum and substance of those pushing
lower theory testing, then your assertions in this venue
that put an implied equal weight on it are totally off the mark.

For the sake of this discussion, I think it is safe to
say that NO ONE has suggested in this USENET
arena that we should lower or eliminate theory testing.
Additionally, even if you can point to one or two individuals
that have, you know very well that it is an extreme minority
viewpoint that isn't shared by the vast majority of
hams on either side of the code/no code issue.

>The key for hams is to secure a restoring of code and/or

>cannot declare "no one is pushing for easier theory
>requirements."

Who and how often? I restate my comments above.

>The problem with the eased requirement scenario is that it
>has yet to be shown that eased requirements would be
>beneficial to the Amateur Service.

This is only an issue if there is any movement to ease
requirements (other than the CW). Otherwise, this

is just a diversion on your part from the basic question
of code/slow code/no code debate.

> If Part 97.1 is to
>remain a viable component of the Amateur Service,
>easing of requirements does not fit in.

Changing requirements does not need to simply translate
into easing requirments.

> If, on the other
>hand, ARRL and FCC wish to declare the new purpose and goals
>of the Amateur Service, it would be more professional of
>them to do it now, and get on with rebuilding a new Service.

No one in this newsgroup seems to be suggesting this
as a possibility other than yourself. The sky is not falling.

>In that way, at least, no one operates under false pretenses.
>The new challenge then becomes justifying one's frequency
>allocations under the new rules of the game.

Or it isn't an issue if none of the above is true, which is exactly
what I'll assert here.

Well, there certainly are a lot of Techs and Tech+'s,
but not THAT many.

If you add both classes together, they constitute about
41% of the licensees. I think 20.3% are Techs and Tech+
just over 21%.

Hi,

Now that my 2/70 hand held has just packed up I was thinking about getting a ssb rig. My first problem is what frequency to get (i'm only a B license (above 30 Mhz only), and the second is what rig ?

I was hoping to maybe work some dx, so I was thinking about 6m, would I find much out there (my qth is 12 miles from Gatwick airport (in a valley :{)).

To get the most out of my signal (I can't use 2 much power as I live in a housing estate), I was thinking of using a beam, would this be the best bet ??

Sorry if these questions sound daft, but i've only ever used ssb at JOTA.

Andy, g7ueh

(before anyone suggests it, i am 'slowly' learning morse, but i need something to play with in the mean time !!!)

Boy... Are YOU out of touch!

I work alot of weak signal VHF and plenty of contacts would not have been possible without the use of CW.

I recognise this for what it is.... Instead of trying to meet the requirement for a higher class lisence, attack the requirements... Thats easier. This constant clamouring to lower requirements is not unique to Amateur Radio either. It appears that a large group of young people would rather complain than work to meet existing requirements.

Its that requirement that keeps Amateur Radio from being another CB mess!

Good on you Steve I agree there has been enough. I'm only sorry I didn't see this post before the shot I took at you this morning. Let's get some usefull discussion going here. The whole code anti-code has probably done more to drive away potential hams than anything else.

In our area I regularly speak at Hamfests and Club meetings on satellites and technical issues. I admit I take pride in teaching guys who have been extras since there was such a thing. We all get along pretty well and with a few exceptions there is very little attention paid to what class of license anyone has.

One of the fellows I work with is a Scout leader and I just got him to get his codeless tech he found an advanced who is father of one of the boys and the troop will be borrowing the local club station for the Jamboree on the Air this Fall. I hope we work your troop and foster a little good will for a change.

>of non-type accepted equipment where type acceptance is required.

The FCC has held (and been upheld in federal court) that mere possession
of a modified CB radio is prima fascia evidence of intent to use it illegally,
and have confiscated and destroyed such radios, as well as prosecuting the
owners.

Now if the modification is to convert it to 10 meters, and the owner is
a ham, that's different. It's no longer a CB radio, it's an amateur
radio, and possession of non-Type Accepted amateur gear by amateurs
is the norm, and not illegal.

I know this sounds somewhat akin to the priest who was found on
Fridays repeatedly dipping a steak under water while intoning,
"You were a steak, now you're a fish", but it is how the case
law has developed on this subject.

>license classes. Anyone who truly wants a ham license will find that
>learning the code at the required snail's pace is no barrier at all...or
>am I overestimating people's abilities?

Several points:

1. Have you EVER really listened on VHF/UHF/Microwave bands ?
And I don't mean the local repeater channel how about using
the ssb segment of the band (assuming you have such a thing in the USA)
with a small beam (correctly polarised). I think you would be surprised.

2. What "snails pace" for the cw test - it maybe in the US, but what about the rest
of the world ?
The cw requirements vary from country to country - should't they be THE SAME
everywhere?

3. I am a no-code operator and I object to being called "poor" because of it.
I observe the band plans, I observe the "rules" when working DX.
I do not use FM on the ssb/satellite areas of 144/432 - but I know of several
stations who do (all cw qualified!) who state that "it's only 2 metres

and it's used by cb operators for local use - nobody uses it seriously" - and
they are in your words "the real operators" ie those who can use cw.

4. I know several radio officers on ships (two of which are cruise ships sailing out of the US)
who won't use cw unless they have to - and they are the professionals. Try calling the US Coast Guard on cw and see how far you get !

>If you want to limit the pool why not limit it to those actually willing
>to study and learn something useful?

Exactly. The current question pool system is a joke. This the the 90s, we have the technology, let's develop a test generator program. Let's generate a custom test (and answer key) that can't be memorized for each applicant. Let's test knowledge, not memory.

I agree that the morse code issue is only a matter of time. Once there was a need to know it for emergency comms, now that need is all but gone. This doesn't mean I think hams shouldn't learn it - there's a whole world of radio you'd miss out on if you didn't!

>And at least it didn't drift, the Clegg did. It was certainly a novel
>radio for its time, but not something I'd want to put back on the air
>today.

Hi all!

I have also owned the Clegg FM-27B and reflect the same problems with
its spurious output. I also had severe intermod and overload promlems
on receive, as well. It was a novelty radio to own, though, in a day
when most radios were crystal controlled and had only 6 to 12 channels.
If I remember correctly, the Clegg also was one of the few that put
out a full 25 watts in a day when 10 watts was the norm for most rigs.

As far as the Regency, I have never owned an HR-2, but I still own an
HR-6, 6 meter rig. Those radios have the most un-stable transmitter I
have ever seen. You can keep the spurs down if you tune the transmitter
on the frequency you intend to use most, into the antenna you will be
using. Don't change frequencies, though, because you will throw spurs
all over the band!

I operate on 52.525 Mhz with this radio, and if my mobile antenna gets
wet, causing the SWR to rise, The transmitter goes nuts and I start to
bring up a repeater that has its input on 51.80, almost 2 miles away!
Now thats a sloppy transmitter!!!

I would like to see more stories relating to the classic radios going back
to the days when repeaters were just becoming popular----back in the
days when you were lucky to have 10 watts, a Ringo, and 6 channels.
It would be much better reading than all of the mud that is being slung
back and forth on this newsgroup!

I think this may be a "fenceless fence", John. Do any of your neighbors
have dogs? These devices use a buried perimeter wire excited by a signal
in the 60 kHz range. The dog wears a collar that gives him a shock if
he approaches the wire too closely. What you're hearing is probably
harmonics from this. Your IC-738 should be able to tune this range
directly, have a listen.

Gary

: Perhaps we need a way to designate our QSL strategy via a code.
: These days QSL has become (in common usage) a synonym for "R"oger as
: in "QSL the five by nine". (At least it seems that way to me)

First of all, in an earlier reply, I made the mistake of using QSL card in the same sentence as junk mail. This is definitely not a good analogy. I always did enjoy swapping QSL cards, no matter if it was my 10th NY or CA QSO. I therefore retract the statement, with apologies to the group.

It's enlightening to see the changes over the 30 years that I have been a ham. Back then, as I recall, it was the custom to discuss QSL/not to QSL near the end of the QSO. I did, occasionally, run into someone who didn't play the game, so I didn't waste my time or money or card. Unless customs have changed in 30 years, I still advocate this approach. That way, there are no bad feelings or unfulfilled expectations. Also, back 30 years, the "QSL is the final courtesy of a QSO" expression was the rule. As far as courtesy in general, things have definitely changed over the years. Also, most of the domestic hams I worked didn't bother with a first-class stamp and envelope, much less a SASE; they simply stuck a postcard stamp on the card. I always did enjoy getting cards in an envelope, though, because they usually took less of a beating in the mail, and didn't have any postal cancellation marks on them.

I have no strong feelings on this issue, and can appreciate the views expressed by both sides, to a point. If we play the game as some advocate today, it can amount to 64 cents/QSL card. I don't know many hams who are wealthy. Let's says you received those hypothetical 100 cards as a result of participating in a contect. That's 64 bucks, folks, 32 if you are on the receiving end of an unsolicited cards! I have heard it said in general, that some people had stopped sending even Christmas cards, or cut down their lists, several postal increases ago. I think due consideration needs to be given to the fact that times are hard for some, and many hams are operating their stations on a tight budget.

Just one ham's opinion, FWIW.

1695. RFI telephone parts

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-31 00:00:00 UTC
From: taylor@tix.timeplex.COM
Message-ID: <9601311455.AA00729@tix.timeplex.com>
Source record: 231312

I want to modify my own telephone for RFI proofing. The BeLL System practice 500-150-100 covers fixing 500 and 2500 telsets for RFI. They recommend replacing the internal network of the phone with a 425J. Does anyone have a source for this part or have a way of getting the component values for the resistors that are added in the circuit of the standard 425 network ? I don't wana spend 80 bucks for a modified phone when all it takes is a few simple mods to do the job.

>(Scott Rosenfeld NF3I) writes:
[snip]
[Paraphrase mode on]

1. Scott posits that QSL's are "part of being an amateur"
and it is our duty as a matter of courtesy to QSL.

2. Gary replies that he doesn't want 'em or need 'em and will respond
iff
you take (most) all the hassle out of the process for him,
and
all of the financial cost (i.e. pay for the filled out card, the
SASE, etc.
else
File13

[Paraphrase mode off]

Well, I can certainly take sides with BOTH on this one.

Personally, I QSL via BURO every foreign QSO, requested or not, just
because its fun (for me), inexpensive (relatively) and I'm in no hurry
to collect an award. If the foreign station reciprocates via BURO,
I am happy, if not I am not unhappy, and do not request a second card.

Now, If I REALLY have a rare DX contact that I'd like, I QSL direct
with SASE/IRC. If I don't receive a card, I don't pursue it further.
(Gambled and lost!)

On domestic, I QSL states/modes/bands I need, and don't QSL others
UNLESS, the QSO was memorable, enjoyable, and would like to develop a
closer contact with the other, or unless I receive a card, in which
case I always reciprocate. PS I Also QSL all SWL's with SASE.

I can also relate to those of us who are either too busy, too poor or
too uninterested in the QSL game to play. I certainly support their
choice to pursue this hobby as THEY see fit. (I have been in all
previous categories (busy, poor, uninterested) personally at one time
or another).

So I guess, for me, I don't have an expectation that I will receive
any cards, I have the commitment to QSL myself according to my
personal tastes, and I receive the cards that I do, and based on that,
continue to execute my QSL strategy. Perhaps, if the game changes

(i.e., I receive almost no cards back), then I will stop sending them out.

I guess the real question posited in this discussion is
"Is there a certain "way" that an amateur should look, act, feel and behave regarding the QSLing obligation/duty/expectation/tradition"

There are many stereotypes that get thrown around in these newsgroups {you KNOW you're a ham when...].
I think that perhaps 30 years ago, there might have been more commonality, but today, with the merging of telecom, datacomm, networking, internetworking, radio, spacecraft, planetary experimentation (i.e. moon bounce, listening to Impacts on Jupiter, etc) that the hobby is becoming WAY more than contesting, and QSLing, and that for some (myself included) QSLing is a fun and somewhat nostalgic endeavor, that for many it is a downright nuisance, and we need to acknowledge that the hobby is changing, and that there are many more sub hobbies to be involved in, and that you aren't a "bad ham" if you don't want to QSL.

Perhaps we need a way to designate our QSL strategy via a code.
These days QSL has become (in common usage) a synonym for "R"oger as in "QSL the five by nine". (At least it seems that way to me)

My book still has QSL = "Can you acknowledge receipt?"
I guess its a matter of interpretation here. I always assumed this meant "Can you acknowledge receipt of this message by HARD COPY", with the "meaning" being, "Can you confirm IN WRITING that I made this contact with you via radio"

I CAN see however "Can you acknowledge receipt?" could mean, "Can you VERBALLY tell me that you received the information I just sent you correctly", and that in a Datacomm paradigm, this would be equivalent to an ACK(nowledge).

If we could agree (heh) that "QSL" should be restored to a meaning of confirming via hardcopy, rather than a verbal acknowledgement (which, btw, "R"oger, or "CFM" will work for me very well) then we might have something like the following:

QSL? Will you send me a QSL?
QSL I will send you a QSL via ____ (at my own expense)
QSL/? What is your QSL Policy?
QSL/R I will QSL all cards I receive at my own expense
QSL/N I send no QSL cards and will not respond to any received (i.e. I don't play)
QSL/S I will QSL iff you send a SASE/IRC
QSL/RS I will QSL all cards I receive, if you send a SASE, faster
QSL/SC I will write confirmed on a card YOU fill out if you send a

SASE also.
QSL/A I QSL all contacts made, solicited or not.
etc

Or perhaps, a numeric qualifier as in:
QSL./0 I don't play
QSL/1 I will QSL all received
etc

Or, dare I suggest tampering with a sacred cow:
How about "RSTQ" (Readabiliy, Strength, Tone, QSL preference)?

Or for Voice "Yep, yer five by nine QSL zEEEE-rowh" or "Yep yer five by nine by zEEEE-rowh" for those who are *proud* about not playing the QSL game. :-)

Digital should be pretty easy, kinda like a .sig, just send it as part of the general exchange.

Perhaps we could have it as a "check off preference" on the form 610 that will (in time) populate the callbook. "No stated preference" would guarantee nothing, but a stated preference should be fair warning.

I mean, you can check off on your 1040 if you want to contribute a buck to the presidential election campaign fund, so what's so different? :-) (Please no flames about the out-of-work-overworked-FCC-burden]

Anyway, my .06

-rich

~~~~~~
Todd, you are absolutely right in as far as the type of contest that
you have in mind, but I believe what is beling proposed is more in
the line of the technical competition that is done regularly on AO-13.
The object of the contest is to see who can copy the weakest of
an ever decreasing string of CW uplinks.
If they are considering a contest like we hear on the HF bands we
will all suffer the results of transponder overload.

ARLX004 Nick Marshall, W6OLO, SK

Nick Marshall, W6OLO, a pioneer in the amateur satellite world and
one of the founders of Project OSCAR 35 years ago has died. He was
81. At the time of his death, Marshall was serving as the president
of Project Oscar. Services were held January 28 in Sebastapol,
California, where Nick lived.

AMSAT President Bill Tynan, W3XO, who had known Nick for almost 30
years, called him an inspiration to early AMSAT enthusiasts. Bill
added that if Nick's dream of an Amateur Radio transponder on the
Moon could ever be realized, it should carry the call sign W6OLO.

It's pretty straight forward. Bring your current (valid) certificate
and present yourself to the local (nearest) Dept of Transport &
Communication (DoTC). Takes about half an hour. You will likely get
to chose your call from the unallocated listings. Cost - gulp - is much
more than you pay at home. Currently AU$51. US$38.

Have a nice stay.

Murray Kelly. VK4AOK.

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at http://www.csz.com/sarrio.html. This new classified page will allow Hams to find equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear you'er interested in, you are also provided with easy point-and-click e-mail access, directly to the Ham that listed the item.

For those Hams with gear to sell, take note! there is NO charge to list your equipment within Ham Classifieds, and there will be no posting time delays. Your posting(s) will go on-line in our classified search engine in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission your "For Sale" classified is immediately on-line.

```
I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.
```

Give it a try, and let me know how you like it (we are still beta testing)

SB QST @ ARL $ARLB008
ARLB008 FCC affirms 219-220 MHz

ZCZC AG87
QST de W1AW
ARRL Bulletin 8 ARLB008
From ARRL Headquarters
Newington CT January 31, 1996
To all radio amateurs

SB QST ARL ARLB008
ARLB008 FCC affirms 219-220 MHz

The FCC has affirmed the secondary allocation of 219-220 MHz for Amateur Radio. The action, for the most part, denies a Petition for Reconsideration filed by Orion Telecom, an Automated Maritime Telecommunications System licensee. Orion had argued to rescind the decision to allocate 219-220 MHz to ham radio saying the 50-mile exclusion distance between AMTS and amateur operations was insufficient to protect primary AMTS operations from harmful interference. Orion asserted that a 575-mile exclusion distance was necessary, which would have precluded Amateur Radio operation in many areas. AMTS coast stations use 219-220 MHz to receive, and 217-218 MHz to transmit.

The FCC did agree with Orion's concern that the amateur rules do not adequately specify the frequency range of AMTS operations. The FCC amended its rules to specifically call attention to the fact that one must look at 217-218 MHz assignments to know what AMTS coast stations are operating in a given area.

ARRL Executive Vice President David Sumner, K1ZZ, says the League is pleased that the FCC reaffirmed its commitment to provide some relief to the Amateur Service at 219-220 MHz to offset the loss of access to 220-222 MHz. He says the ARRL has a procedure in place to ensure that amateurs planning to use 219-220 MHz are aware of their obligations to avoid harmful interference to other services.

From: sorgatz@avatar.tti.com
Message-ID: <DM28rw.J9t@ttinews.tti.com>
Source record: 231327

Is there a chance in hell that the Amateur's of the World might exert sufficient influence (economically, politically or via the UN) to stop the broadcast industry's qrm?

Specifically, I refer to the obvious offenders: Japan on 160m, Korea on 80 & 40m, People's Republic of China on 20 & 15m and the whole lesser arcana of countries that allow it's broadcasters to use frequencies that are nominally allocated to Amateur operations. (Anyone got a complete list of the ITU non-sigs? Maybe I should write them and ask for a list to post here for reference?)

Let us begin with Japan's station that usually sits at 1812 KHz...WHY is it still there? Would the government of Japan be interested in a ONE MONTH boycott of all Japanese products by hams to show support in wanting simple compliance with the ITU bandplan??

Something to think about...
..as you listen to the war zone on 40m!

I thought this discussion was about handling QSLs that you receive.
Obviously, whether you originate a card should be your own choice. The
big issue is what to do with unsolicited cards you receive. If I want
a QSL returned, I always send a SASE (or SAE/Green Stamp) with it
(except some DX thru the buro, and I usually hand-deliver to local club
members and they do the same in return). Looks like I have about 75
cases where cards and SASEs have been sent out to US hams who haven't
even taken the trouble to respond. These includes contesters, and
even some of the NASA Apollo 11 special event stations. The only one
in the list who I feel has a valid excuse is W1TMO, who is unfortunately
a Silent Key.

1713. Mac/Ham Users Group

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-31 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-3101961821050001@wd1v.mv.com>
Source record: 231330

"Macnet Roster" (ver. 730) has just been updated and is now a stand-alone application! The version number = the number of hams using Macs.

"Macnet Roster" lists:

o CALL SIGN @ HOME PBBS
o FULL NAME
o ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

of every known amateur radio operator in the world that uses a Mac computer.

You can use "Macnet Roster" to find other Mac users that you can then communicate with directly. Compare notes on software, applications, ideas, hints and kinks, and make new ham friends that use the same computer you do. (You already know how cool you are - imagine accessing "the rest of us"!)

If you'd like the latest "Macnet Roster":

Send me a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER".

Or connect to my home page via the WWW

http://www.mv.com/ipusers/wd1v

Put YOUR INFO (via EMAIL or disk using TEACH TEXT) if you'd like to be included in the "Macnet Roster" or send an update to your stats to me via pkt or email anytime.

73,

Check out my Home Page for:

: I got a Yaesu FT 767 GX, with 144 Mhz unit. It's a good rig, expecially for
: The 2m unit works till 145.999.
: My question is: how to extend till 147.999 ?
: The same problem is on the other unit (430 Mhz)!

There is a "mod" to take care of your 2M problem on the QRZ ftp site. After a reset, the 2M module defaults to that Japanese 2M band (144-146MHz). To reset it to US 2M, you have to turn the backup switch off and hold down the "2" key on the keypad while turning the rig on. The 430 module only supports 430-440, if you want to use the upper half of 70cm, you have to replace the module with the 440-450 one.

: It's also possible to extend TX capabilities ?

There is a switch you can flip inside the rig to make it xmit pretty much anywhere on HF. Again, the actual mod is on the QRZ site.

Incidentally, I'm looking for a 6M module for my 767, if anyone has one they'd like to part with.

Thank-you for reading this. My name is Michael Long (KB8WPE) and I am the Public Relations Manager for the Husky Amateur Radio Club (HARC) whose callsign is W8YY. The club is located on the Michigan Technological University campus.

Starting on February 1, 6am EST, and continuing on until February 3, 6am EST, W8YY will be running a Special Events station for Michigan Tech's Winter Carnival '96. The frequencies listed below are the most likely place we will be operating. For this Special Events station we have 8"x11" certificates that would look great on anyones' wall! All you have to do is contact us and then send a QSL with a self addressed stamped envelope to receive the certificate.

Here are the frequencies:

Band Frequency Mode Time
160m 1.90 MHz LSB 8pm-8am
75m 3.90 MHz LSB 10pm-8am
40m 7.25 MHz LSB 7pm-10pm
20m 14.250 MHz USB majority of the day (8am-7pm)
17m 18.150 MHz USB if open 8am-7pm
15m 21.350 MHz USB if open 8am-7pm
10m 28.40 MHz USB if open 8am-7pm
2m 144.2 MHz USB All the time
146.58 MHz FM All the time
70cm 432.100 MHz USB All the time

Again, thank-you for reading this message and all of us here hope to here from you during the Special Events station!

For any more info. email me at cmlong@mtu.edu or the Club President, Dave Gillahan, at dmgillah@mtu.edu

You can also check out our homepage at
http://techsrv1.tech.mtu.edu:8080/harc.html
Though it is just beginning it does have a little information on it.

Sincerely,
Mike Long -KB8WPE-

Personally I doubt the FCC has kept the code requirement because of pig-headed hams. They probably have their own reasons, perhaps just inertia. We seem to have way too little influence on what they decide, as far as I can tell. Heck, we can't even get them to allow us to have unrestricted packet-internet gateways, so far.

From: tracker@indirect.com
Message-ID: <tracker.39.00223E1D@indirect.com>
Source record: 231338

Dan Rockhold, AB7AS and Mark Sunders, KJ7BS are looking for a location in North Dakota from which to operate AB7AS during the 1996 ARRL November Sweepstakes.

If you are not a contester or know someone who is not a contester, and would be agreeable to having 2 guest operators for the contest, please respond!

We are in the planning stages for this expedition, but we need to get a location very soon.

We are interested in the station equipment, especially the antennas. We can bring out own radios, power supplies, computers and interfaces, if necessary. However, we can not bring the antenna farm, too.

The station owner is more than welcome to join us in out endevor, or just watch, keep up awake, or what ever. WE WANT YOU TO BE PART OF OUR TEAM. Our goal is NOT to win the contest, but to have a good time and gain new operating skills. From Dan's home QTH in Phoenix, AZ, we got all but 7 sections in the 1995 November Sweepstakes. We do have a lot of fun with this hobby.

If you are interested, or know someone who is interested, please contact me or Dan at one of the addresses below.

1722. Propagation N.M. to Baja ????

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-31 00:00:00 UTC
From: boardman@cobra.unm.edu
Message-ID: <4eoumh$85@lynx.unm.edu>
Source record: 231339

A old friend of mine will shortly be sailing south from San Diego along
the west coast of Baja California. He has an old 35w rig on his sailboat,
but it only covers 80,40,and 20 meters. I just got my tech+ license and
I'm in the process of getting my HF rig on the air. We wanted to set up
a schedule to try to contact each other, but I don't know enough about
propagation to know which bands and times would be the best to try.
I'm in Albuquerque, N.M., so the distances will range from 700 miles
to 1200-1300 miles as he heads south. After looking at some propagation
charts, it seems like 40 meters in the evening might be our best bet.
Does anyone having more experience in this area have any other suggestions
as to frequencies and times that might work better?

TIA & 73,

-Bob

The modification of cb gear isn't illegal..there were lots of cb rigs converted to low power 10 m rigs after the cb bust in the last decade.

in general the modification of equipment isn't were the illegality is. it's the use of non-type accepted equipment where type acceptance is required.

I'd prefer to see AMSAT substantially beef up their awards program.

There's a number of reasons why a short-term contest can't enjoy participation by the largest number of possible people. But the notion of chasing a particularly attractive piece of wallpaper (or plaque) can be aspired to by a far wider subset of satellite-capable radio amateurs.

Besides, it's a longer term committment (from both AMSAT's and the membership's perspective) that I think is conducive to AMSAT's continued good health as an organization.

No. The comments of others about satellite hogging should prevail. There
are stations that have set up on packet to connect to MIR through the whole
pass, every pass! Very unfortunate, but all we can do is minimize the
temptations.

ZCZC AE50
QST de W1AW
DX Bulletin 8 ARLD008
From ARRL Headquarters
Newington CT February 1, 1996
To all radio amateurs

SB DX ARL ARLD008
ARLD008 DX news

This week's bulletin was made possible with info provided by Luke, PT7WA, Frank, AH0W, PT2GTI, DL7VOA, DL9GOA, DX-NL, Chris, G4BUE, Tedd, KB8NW, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

WAKE ISLAND UPDATE, KH9. The team has arrived on Wake, but no PacketCluster spots have been posted in the northeast as of press time. Due to work scheduling, Mike, KC7V, will not be on the team. Bob, N6EK, is the new team member. The new route for cards is via K4HQI.

SOUTHERN COOK ISLANDS, ZK1. K8PYD and WT8S expect to operate from February 17 to February 24. They will operate mostly CW and RTTY, with some SSB, for this all band effort. Listen for ZK1PYD and ZK1WTS. Their trip to Northern Cook Islands was canceled due to transportation problems.

CHATHAM ISLANDS, ZL7. Barry, G3MFW/ZS1JF, will operate from ZL7 February 15 to 19. He prefers SSB. Call sign TBA. QSL via KA1JC.

UGANDA, 5X. Peter, ON6TT, is returning to Uganda for a 6 month to 2 year stint managing a telecom team associated with the UN World Food Program. It may take a month before he receives his 5X license. Plans are to operate mostly SSB and RTTY, though he works CW on request or by sked. Peter will be on the air for most contests. QSL via ON5NT. Though based in 5X, he will visit and operate from 9X, 9U, 9Q, 5H, ST, ST0, T5, 5Z, E3 and ET.

THE GAMBIA, C56. DL2RUM, DL7BO, DL7DF, DL7UFR and DL7URH will operate two stations from near Banjul March 4 to 18. Call signs TBA. CW frequencies will be 1822, 3505, 7005, 10115, 14005, 18073 and 21005. SSB will be on popular DX frequencies. Though primarily an MF/HF, CW/SSB/RTTY operation, some OSCAR 13 and 6 meter work is

possible. QSL via DL7DF.

TONGA, A3. Paul, KK6H, will operate during spare time, usually from 1700 to 1900z and 0500 to 0900z. He will sign A35RK on CW and RTTY. QSL via W7TSQ, either direct or via the W7 bureau.

MALDIVE ISLANDS, 8Q. Chris, HB9CYV, and Rolf, HB9CZR, hope to sign 8Q7YV and 8Q7ZR respectively, February 14 to 20. Plans are for 80 through 10 meter activity, with a chance for 160 meters as well.

IVORY COAST, TU. G3SXW, G4FAM, K7GE, N7BG and WB7SRW will be active in the ARRL DX CW Contest February 17 and 18 as TU5A. QSL via W8AEF. They hope to be on the air with individual call signs February 15 and 16.

INDIA. Pai, VU2PAI, informs DX'ers that he prefers postage stamps to green stamps. Indian Excise and Customs rules come into play here. Pai continues to be active on 160 meters with a dipole, though new antennas at a new QTH are in the works.

TRINDADE ISLAND, PY0. PY1UP will be doing a four month hitch at the Brazilian Naval Base and intends to operate PY0TI on all bands. His ship leaves Rio early February. QSL via PY1UP.

CAYMAN ISLANDS, ZF. Dick, K3DI, will sign ZF2OP with QRP in the ARRL CW DX Contest February 17 and 18. QSL via K3DI.

MONTSERRAT, VP2M. Art, WA2UJH, returns as VP2MDY February 16 to March 1. He will operate mostly CW 160 to 10 meters. QSL via NW8F.

THIS WEEKEND ON THE RADIO. Operating events to choose from include the Classic Radio Exchange, North American Sprint phone and Maine, New Hampshire, Vermont and Northern New England QSO Parties. See page 108 in February QST for rules.

Hey wait a minute.....!
I have an FM-27B. And I still use it from time to time. Damn boomerang...
Been stolen from my car three (yes, count 'em - 3!) times. and it keeps
finding its way home, like a homing pidgeon! And when I put it on the air,
all manner of things home in on my QTH, angry neighbors, stray jetliners out
of Pittsburgh, scud missiles, cable TV tech reps, and NYNEX security personnel.
So be careful what you say about these vintage radios. Bring back the
spark CW transmitters, while you're at it, too!!!

Wrap about 1-15 turns of the cord going into the telephone
trought a 2-3 inch iron core toroid. Also, insure there is
a GOOD ground at the telephone junction box which is mounted
outside next to your house. By doing this, is has eliminated RFI
and my wife has never complained since.

How is contesting related to using too much uplink power?
I would say a contest is the ideal way to educate users about uplink
power. When many stations are active, a few strong ones will surely
attract attention and can be asked to lower their power.
On a sat like ao-13, it is easy to arrange for a few monitoring stations
that just blacklist those stations that run too much power and don't
reduce it when asked.

Rob

Message-ID: <4er70j$s8q@news3.cts.com>

San Diego County RACES (SDCR) announces their site on the World Wide Web.

http://www.cts.com/browse/garym/races

SDCR is an all volunteer communications service that provides mutual-aid communications for government agencies for special operations, emergencies, and disasters. We are organized as a reserve unit of the San Diego County Sheriff's Department with operational responsibilities to the San Diego County Office of Disaster Preparedness (ODP) with over 500 members.

SDCR provides a variety of special communications resources including an extensive communications van (tour the van thru our web pages), an Internet/Packet-radio gateway and BBS, extensive repeater system, and fixed stations located at 32 state, county and local government facilities around the County of San Diego.

Field teams are on stand-by 24 hours a day, 365 days a year, including staff for the fixed RACES stations, the RACES Communications Vehicle (RCV) Team, Motorized Team and the Special Actions Team.

For more information about RACES and San Diego County RACES, please see our web pages.

Can anymore identify the beacon on 3.545 signing GKE 1 ?
It is consistently 20 db over s9 in the eatern U.S.
I assume it is a marine beacon of some kind. What a huge signal if
it is off the coast of the U.K. ! How much power could it be using?

Thanks if you have any info.

If you're thinking in "HF style contest" on the birds, i say "That's
totaly non sence!
It come to my mind a couple questions:
1- for what purpouse?
2- in whitch bird(s)?
3- what about the others who don't have visibility?
4- QRP only?
and i'm sure you're thinking in lot more...
I think all the answers go to the same word: NO

But, if you think in a ZRO test, or any other kind, but always thinking
that a satellite has a limited power budget and the winner is not the
"top power", but the "big ears", than i say YES.

DIGITAL JOURNAL WW DIGITAL WPX CONTEST PART 2
10-11 FEBRUARY, 1996

TYPES OF COMPETITION

SINGLE OPERATOR)ONE TRANSMITTED SIGNALS ONLY ALLOWED ON THE AIR AT THE TIME).

HIGH POWER: SINGLE OPERATOR STATIONS ARE THOSE AT WHICH ONE PERSON PERFORMS ALL OF THE OPERATING AND LOGGING FUNCTIONS.
LOW POWER: SAME AS HIGH EXCEPT THAT OUTPUT POWER SHALL NOT EXCEED 150 WATTS. STATIONS IN THIS CATEGORY WILL COMPETE WITH OTHER LOW-POWER STATIONS ONLY. (ONLY FOR AN ALL BAND ENTRY).

SINGLE BAND STATIONS ARE HIGH POWER ONLY (EVEN IF LOW POWER USED).
MULTI-OPERATOR (ALL BAND OPERATION ONLY) NO POWER CLASSES.

sINGLE TRANSMITTER: ONLY ONE TRANSMITTER NAD ONE BAND PERMITTED DURING THE SAME TIME PERIOD (DEFINED AS 10 MINUTES). 10 MINUTES STARTS WHEN YOU TRANSMIT ON ANY BAND.

MULTI-TRANSMITTER: NO LIMIT TO TRANSMITTERS, BUT ONLY ONE SIGNAL AND RUNNING STATION ALLOWED PER BAND.

SHORT WAVE LISTENER. SWL. TOP FIVE SWLS WILL RECEIVE CERTIFICATES. LOG MUST IDENTIFY BOTH STATIONS HEARD AND GIVE BOTH EXCHANGES.

NOTE: ALL TRANSMITTERS MUST BE LOCATED WITHIN A 500 METER DIAMETER OR WITHIN PROPERTY LIMITS OF THE STATION LICENSEE'S ADDRESS, WHICHEVER IS THE GREATER. ALL ANTENNAS MUST BE PHYSICALLY

CONNECTES BY WIRES TO THE TRANSMITTERS AND RECEIVERS. ALL SINGLE OPERATOR CLASSES CAN HAVE ONLY ONE SIGNLA ON THE AIR AT A TIME.

DX PACKET CLUSTERS, AND DX ALERTING ASSISTANCE IS PERMITTED IN ALL CLASSES OF OPERATION.

MORE NEXT WEEK

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(19 JANUARY - 25 JANUARY)

ISSUED 26 JANUARY

SUMMARY

Date 19 20 21 22 23 24 25
10cm 71 71 72 72 73 73 74
A 9 10 9 6 4 5 (5 ESTIMATED)
T 13 12 4 7 23 3 16

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.
THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 23RD AND 25TH JANUARY, AND QUIET TO UNSETTLED OTHERWISE.
MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE MOSTLY NEAR PREDICTED MONTHLY VALUES THROUGHOUT THE PERIOD, EXCEPT FOR A SHORT PERIOD FROM 0800 TO 1000 ON 20TH WITH ENHANCEMENTS OF 30 TO 50 PER CENT.
STRONG SPORADIC E WAS PRESENT AT SOME TIME ON EVERY DAY OF THE PERIOD, BLANKETING THE F LAYER ON 19TH AND 20TH. THE STRONG SPORADIC E BLANKETING WAS CONTINENT-WIDE FROM 19TH TO 21ST. SPREAD F WAS REPORTED ON 23RD AND 25TH.

FORECAST (26 JANUARY - 01 FEBRUARY)

SOLAR: VERY LOW

GEOMAGNETIC: QUIET TO UNSETTLED

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES

COURTESY OF IPS RADIO AND SPACE SERVICES

APOLOGIES FOR THE LACK OF RTTY DX NOTES THIS WEEK, BUT THERE HAS BEEN NOTHING THROUGH PACKET FOR NEARLY TWO WEEKS AND AS ANARTS IS ON THE MAILING LIST FOR THE DX NOTES, ONE CAN ONLY ASSUME THAT THE HOLIDAY SEASON COULD BE THE PROBLEM. HOPEFULLY WE WILL BE BACK TO NORMAL NEXT WEEK WITH A LIST OF RTTY CALL-SIGNS FOR YOU TO TRY.

Ohio/Penn DX Bulletin No. 237 -- Excerpts

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K4UTE, AA5F, KK6H, K8GG, WB8LFO, AH0W/OH2LVG, K0HB, KI0W, 9M2TO, Alberta Amateur News, AH0AV/JH6RTO, G4BUE & DX NEWS SHEET, PA3ERC, VE3HO, VS6WV/XU6WV, ZP5VG, ZS1FJ/G4MFW and ZS1CM the following DX information.

3A, MONACO Laura-Marcelle, 3A2MD, reports she is on every day between 1400z and 1600z on 14175-14180 kHz (+/-). QSL to her personal address (it is faster to receive QSL than via PO Box!): Laura-Marcelle Martinez, 73 Bd du Jardin Exotique, 98000 Monaco.

4U1UN QSL CHANGE (from Jerry, WB8LFO) "Effective immediately, the requests for any of the 4U1UN cards or any of their special callsigns (such as 4U50UN) should be sent to WB8LFO. The use of W8CZN (our mail drop) will be discontinued. We would like to thank Jim, W8CZN and Rick, K8SCI of North Olmstead Amateur Radio Depot (the pick-up point) for their services. The closing of Rick's store is what brought about this change. N.O.A.R.D will be missed. WB8LFO has logs going back to 1986 for the UN operations and is presently working on bureau QSL cards. Cards will be processed as fast as possible. A reminder that the UN Readiness Group meets Tuesday evening on 14.268 MHz at 7:30 EST or on Wednesdays at 0030z. Any questions about 4U1UN QSLs may be directed to me by E-mail at the following addresses: wb8lfo@centuryinter.net OR aa1671@freenet.lorain.oberlin.edu
The address at Century is the preferred."

9G, GHANA Steve, PA3GBQ, is now active as 9G5BQ. He will be active on all bands. Check around 3515 kHz around 0240z and 7010 kHz around 0115z. The length of his stay is unknown at this time. QSL via his homecall.

9J, ZAMBIA Brian, 9J2BO, who is quite active on all bands (including the WARC bands) was heard around 3505 kHz at 0415z and 10103 kHz at 0520z. Brain has announced a new QSL address. QSL to: Brian Otter, PO Box 34554, Lusaka, Zambia.

9M2, PENANG ISLAND (WEST MALAYSIA *UPDATE*) Tex, 9M2TO, has supplied OPDX with the following on the air schedule. He likes working CW, so look for him: 7007/7027 kHz (FOR USA) at 1400-1500z, 10102 kHz at 1300-1400z and 18070 kHz (WEEKEND) at 0800-1000z. He reports that he has worked over 1,600 QSOs on 17, 30, 40 and 80 meters during November and December (not including the contests). QSL via bureau (JA0DMV JARL) or direct to: Tex Izumo, Bukit Dumbar Apr. 9-4, 97 Jalang Thomas 11700, Gelugore, Malaysia.

CORRECTION DEPARTMENT In last week's bulletin, the zipcode for the PS8YL/PR8 QSL information was incorrect. QSL to: Teresinha V.Nobre, Rua C 2103, Jardim Aeroporto, 64200-970, Parnaiba/PI, Brazil... and... Please correct the name of the QSL Manager for 9K2ZC and 9K2YY to Derek McClure (not Raymond McClure, which is his father and QSL Manager for 9K2ZZ). QSL to Derek McClure, 674

Crestlyn Drive, North Augusta, S.C. 29841.

DXAC NEWS.....The DXAC vote on the possible deletion or withdrawal of Mount Athos has been now pushed back to February.....

SPECIAL PREFIXES COMMEMORATING THE END OF THE HOLOCAUST The Industry Canada Quebec Region has authorized all Canadian Amateurs to use special prefixes to mark the 50th anniversary of the end of the Holocaust from now until 2400z 29th February 1996. Canadian Amateurs may use special prefixes as follows: VA2 change to CG2, VA3-CG3, VA7-CG7, VE1-CF1, VE2-CF2, VE3-CF3, VE4-CF4, VE5-CF5, VE6-CF6, VE7-CF7, VE8-CF8, VE9-CF9, VO1-CZ1, VO2-CZ2, VY1-CK1 and VY2-CK2.

T31, CENTRAL KIRIBATI T30DP is currently on Kanton and is there on government business for a few weeks. Reports indicate that he will be active as T30DP/T31 on 20 meter only, but on the Ohio/Penn Network, he was spotted on 7012 kHz at 1300z. QSL via VK4CRR.

VK0WH LOGS AND QSL CARDS (UPDATE) According to Jim Smith, VK9NS, the VK0WH logs covering 26th November - 31st December 1995 were received from Warren Hull via fax. Warren made slightly more than 200 contacts during that time. Jim anticipates receiving VK0WH logs on a monthly basis. Jim also received the VK0WH QSL cards from the printer, and he will QSL
immediately upon receipt, assuming that he has the appropriate log in hand.

XV, VIETNAM Rolf, XV7SW, has reportedly erected an Inverted L antennas for 80 and 160 meters over the holidays. He will also be adding an Inverted Vee for 40 meters. His location in downtown Hanoi is very noisy, so he may need to consider separate receiving antennas. Rolf is limited to 100 watts on the TopBand. The terms of his license limit him to specific frequencies. On CW listen for him at: 1827, 3505, 7013, 14016,
14021, 21016, 21019, 28016 and 28019 kHz. QSL direct to Rolf T Salme, Embassy of Sweden, Box 9, Hanoi, Vietnam or to his QSL Manager SM3CXS.

ZP73, PARAGUAY (NEW SPECIAL PREFIX) A team of 6 operators will activate the new prefix and callsign ZP73Y, from January 23-30th. The field-day like expedition to the country side, on a hill of about 700 meters high, will be operated totally based on generator power. They intend to be on all bands, but suggested frequencies are: 3795, 7045-60 (RX/TX) 7175 (RX), 14195, 21195 and 28395 kHz. QSL should go to ZP5WYV.

>the radio . . .
> Jeff Shelton/KS4TL

Fact is the company who made the relay for ICOM in Japan went out of business several years ago. Before that happened ICOM tried to forcast the requirements for the relay for the next 5 years. Thye used them up in the 9 to 10 years that have passed since that time.

By following crossreferences in the OED I have found the following
fragments of a "signaller's code", and dates going back to 1891.
Anyone know any more?

ak/ack beer do emma pip esses toc vay/vic (zem?)

Note: ack-ack means AA means anti-aircraft (fire).
pip-emma means P.M. as in after midday.

(I'm also told that beer-beer meant barrage balloon).

> stations.

Say what? I didn't say it would be impossible for the power station
to hear others. His uplink power in no way affects his ability to
hear. In fact, if the power is due to using something like an EME
class antenna array, he'll be able to hear anything that makes it
above the elevated noise floor of the transponder. While transmitting,
his signal will cause the AGC circuit in the transponder to drop
everyone *else's* signal to below the average user's noise floor.
You can win contests by making contacts or preventing others from
making more contacts that you. This topic has been beaten to death
on the VHF reflector for VHF+ contests and on the satellites it
is no longer a local issue but a global one.

Simply listen on AO-13 when someone is using an uplink power that
results in a downlink signal significantly higher than the beacon.
Their QSO continues without a hitch, but everyone else's QSOs
suffers big time.

On Field Day, this is generally not as big a problem as few Field Day
stations are strong enough to dominate the transponder, certainly
not for the few additional points one gets after getting the satellite
bonus.

What benefit will a satellite based contest serve? There is already
a "contest" to measure your stations receive capabilities, which
is where people's effort should be placed as better receive capabilities
benefit everyone.

73,
Todd

Silent key

Silent key

Mr. George Baker VK2CGB passed away on Tuesday 23rd January 1996
after a long illness.

George was a long standing member & a staubch supporter of Taree &
District Amateur Radio Club & was held in high regard by all club
members. He was also a member of Mitchells Island Bushfire
Brigade. George is survived by his wife & two sons.

Vale George VK2CGB

submitted by Roy Brewer
Secretary Taree & District Amateur Radio Club Inc.

VK2 Election notice

Divisional Elections

The Elections for the 1996-1997 Council of the Wireless Institute
of Australia New South Wales Division will be held in association
with the Annual General Meeting on the 20th April 1996.

Nominations for the council are now open and they will close at
12 noon on Saturday 9th March 1996. The Divisional Office will be
open that day as well as its normal opening hours, which will be
given elsewhere in the broadcast.

Candidate resumes will published and distributed with the ballot
papers. Candidates are required to submit their resumes to the
Divisional Office by the close of nominations, in both written
form and as "UNFORMATTED ASCII on a 3.5 inch IBM disk". Resumes
are to be a maximum of 200 words.

Nomination forms are NOW available from the Divisional Office.

The Office's telephone number is (02) 689-2417
The Office's fax number is (02) 633-1525
The Office's free call number is 1800 817-644

The Divisional Office's address is
109 Wigram Street Parramatta
P.O. Box 1066 Parramatta N.S.W. 2124

Peter O'Connell VK2EMU
Divisional Returning Officer

(02) 584-3236 (H)

Divisional exams

Examinations

Next examinations will be held at Amateur Radio House, Wigram St. Parramatta on :

Sunday 18 February 1996
Report at 12.00 noon

losing date for applications for examination :

Thursday 8 February 1996
at 2.00 pm

Eric Fossey, VK2EFY
Divisional Secretary

VK2 Librarian's request

Request from Librarian

I have a request for schematic circuit diagram for FT 707 transceiver. The diagram is that in the instruction manual.

If you would prefer to contact the member direct please give me a call.

home phone 635-4384

VK2 WICEN news

WICEN News

We would like to stress again the importance of notifying the State Co-ordinator about all exercises; should an accident occur and no notification was given, then for the purposes of VRA insurance the exercise simply did not exist.

Although the WICEN (NSW) Web page has been up for a while (with accesses from all over the world) we regret that the interactive form feature is not working, due to what appears to be a local problem. For this and other reasons it is planned to move the page to a more suitable location, when one becomes available.

The Central Coast Amateur Radio Club Field Day, an event not to be missed for publicity purposes, is on 25th February, and since we will not have the caravan this time, then your ideas are requested; please let the Publicity Officer, Dave VK2KFU, know whether you can assist. We are particularly interested in photographs of WICEN in action (that's two words, not one), which can also be scanned for the Web page.

The famous Bungonia Cave Rescue event is on the weekend of 16-17th March, and Mark VK2XGK would like to hear from those wishing to demonstrate their communications skills, under somewhat difficult circumstances; don't worry -- you will not be required to go underground. The potential for publicity here, before various emergency services and the public, should not be overlooked. On the same weekend, on 17th March, is the Red Cross Calling Doorknock Appeal, with David VK2UDT taking enquiries (not Andy VK2XRX as mentioned previously), and he requires around twenty people.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

WICEN (NSW) has an interactive Web page, and the Uniform Resource Locator is: "http://sydney.dialix.oz.au/~wiansw/wicen/"; your comments are invited.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

Piracy on 2 metres

The Parkes and District Amateur Radio Club would like to make everyone aware of the blatant piracy taking place on the 2 meter band by hang-gliders and their ground crews.

A hang-gliding championship has just been held in Forbes, central NSW for the past two weeks and the two meter band was saturated with hang-gliders and their crews using the band as their primary communications.

There were also a large number of foreign participants including Germans, French and Americans who used frequencies supposedly exclusive to Amateur Radio. Frequencies used included repeater inputs, local packet frequencies and even shuttle allocations. When one of the organisers was tracked down he said that they were licensed to use such frequencies. He then said that he had an Amateur callsign and subsequent enquiries found that callsign to be allocated to the scouts!

A brief look inside some of their 4WD vehicles revealed top of the line, properly mounted yaesu rigs. Some were even left turned on, with the two meter frequency clearly evident.

The SMA were contacted over and over again throughout the week as they were not only using Amateur allocations but random commercial allocations from 142 to 144 MHz. Unfortunately the SMA did not see fit to visit the site and stop this intrusion but instead rang the organisers and said that THEY COULD CONTINUE to use the frequencies, commercial and amateur for this year, but not to let it happen next year.

So next time you see a group of hang-gliders in your area have a listen around the primary allocated two meter band and see what you can hear. The next stop for the hang-gliders after Forbes is Bright, in Victoria.

We wait with bated breath to see if the use of the two meter band by these clearly unlicensed operators will stop, as the World Championships will be held in Forbes next year.

A note from the president, Michael Corbin VK2YC:

As this messaage was received at the Parramatta office after the close of business last Thursday, little could be done immediately, in the way of offical action from the WIA.

A letter to the SMA as well as to the Federal office has been prepared and will be forwarded first thing Monday morning.

NEWS BRIEFS

NEWS BRIEFS

Scientists at NASA's Ames Research Centre in California, have been analysing the data sent back by the Galilieo space probe as it plunged into Jupiter's atmosphere last month. The preliminary results have got them rethinking some of their basic ideas on how the planets were formed.

Data from the probe has revealed that Jupiter's atmosphere contains only half the helium expected, and rare elements such as neon were not detected at all. Scientists also expected the atmosphere to be in three distinct layers, but the probe revealed that the layers don't exist. As for lightning, there was none, and the winds were even stronger than expected.

The results indicate that Jupiter's climate is determined, not by heating from the Sun, as is the case on Earth, but the heat sources driving the climate appear to be from the planet's core.

Closer to home, the US government has dropped its legal action against software developer Phil Zimmerman, author of the PGP (Pretty Good Privacy) encryption program. The government considers data encryption software to be in the same category as cruise missiles, and when PGP appeared on Internet and "leaked" out of the USA, Zimmerman was charged with exporting sensitive technology. It's not

known why the government has dropped its case

...meanwhile, in Japan, Professor Yasumada Kanada of the University of Tokyo has gone one up on his rivals at Columbia University, New York, by calculating the mathematical constant, pi, to a record 6,442,450,000 decimal places. The calculation was performed by two different methods, each taking five days on the university's HITAC S-3800/480 computer.

It's now expected that the Chudonovsky brothers at Columbia University will try to improve on Kanada's effort. As pi is an "irrational" number, that is, it goes on forever, so could the rivalry between Tokyo and New York...

Dr. Roger Webster, of Sheffield University in Britain, notes that a value of pi calculated to just 39 decimal places is sufficiently accurate to calculate the circumference of a circle surrounding the entire universe to within the radius of a hydrogen atom.

MIR'S HAM RADIO POWER SUPPLY FAILS

German cosmonaut Thomas Reiter, DF4TR/DP0MIR, aboard the Mir orbital complex, reports that a power supply used for some of the spacecraft's ham radio equipment failed on New Year's Eve. The remaining, older power supply is only capable of powering the old Icom 2-meter transceiver and one 1200-baud TNC. The digital voice module also has failed, so there will be no more automatic voice recordings in the near future.

Reiter reports all four fuses in the two connected transceivers have blown and only two spare fuses remain. Last month, Reiter used the digital voice recorder, built by Thomas Kieselbach, DL2MDE, to broadcast holiday messages. The primary transmitting frequency is 145.800 MHz.

Recently, the cosmonauts on Mir unpacked new Amateur Radio equipment delivered by rocket, including a 70-cm FM transceiver and 9600-baud packet gear.

Reiter was philosophical. "Well, at least we can be reached and still can talk with the world," he said in a message to Dave Larsen, N6JLH.

IPS Report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(19 JANUARY - 25 JANUARY)

ISSUED 26 JANUARY

SUMMARY

Date 19 20 21 22 23 24 25
10cm 71 71 72 72 73 73 74
A 9 10 9 6 4 5 (5 ESTIMATED)
T 13 12 4 7 23 3 16

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 23RD AND 25TH JANUARY, AND QUIET TO UNSETTLED OTHERWISE.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE MOSTLY NEAR PREDICTED MONTHLY VALUES THROUGHOUT THE PERIOD, EXCEPT FOR A SHORT PERIOD FROM 0800 TO 1000 ON 20TH WITH ENHANCEMENTS OF 30 TO 50 PER CENT. STRONG SPORADIC E WAS PRESENT AT SOME TIME ON EVERY DAY OF THE PERIOD, BLANKETING THE F LAYER ON 19TH AND 20TH. THE STRONG SPORADIC E BLANKETING WAS CONTINENT-WIDE FROM 19TH TO 21ST. SPREAD F WAS REPORTED ON 23RD AND 25TH.

FORECAST (26 JANUARY - 01 FEBRUARY)

SOLAR: VERY LOW

GEOMAGNETIC: QUIET TO UNSETTLED

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Liverpool

The first meeting for the Liverpool Club will be held on Wednesday night
the 14th of February.

We will be showing an NTSC video of an American program called HOMETIME. The 30 minute episode is about a sound system called THX and details how to build the biggest and best THX Home Theatre system to satisfy the greatest TV addicts.

If you thought your stereo and surround system was good, then wait until you see this. If you like black boxes, then this is the system for
you!

The venue as usual will be the hall at the Glenfield Scout Camp in Cambridge Avenue at Glenfield, just off Moorebank Rd.

See you on Wednesday night the 14th of February.

--Brad VK2QQ Publicity Officer.

Club news: Summerland

Summerland Amateur Radio Club

(1) The 37th Annual General Meeting of our club is set for Sunday 18th February in the clubrooms at 2pm.
Reports from the various committees and. of course, the elction of office-bearers for 1996.

Be there and do your bit for your club.

(2) W.I.C.E.N. (Northern Rivers) A.G.M. to follow the club meeting.

(3) Applications for the next amateur exam close today, at the club-rooms and the examination will be held Sunday 11th Feb. ... members are reminded that the club-rooms are closed, on examination days, until 2pm.

For more info on these and other club activities, contact Ken VK2HE, Peter VK2TEK, or check out one of our local BBs's - VK2EJV-1, VK2EA-2, VK2SRC-2, VK2YDN-1, all via VK2RPL-2, 668900.

VK2GJ, Graeme, Publicity Officer

Club news: Illawarra

The Illawarra Amateur Radio Society advises all members and friends that their first meeting for 1996 will be held at S.E.S. building Montague St. North Wollongong, Tuesday evening February 13th starting 7.30pm.

Activities for 1996 will be discussed. A table AM/FM radio will be this month's raffle prize so bring your $2 coin.

Tea and coffee served after meeting. More details phone 672296 after 4.30.

from Brian VK2UBF

Club news: AATC

The AATC will hold the next meeting of the A.A.T.C. Inc. as usual on the 2nd Sunday of the month at 109 Wigram St. Parramatta - 1.00 pm, and this will occur on February the 11th.

Anyone interested in ATV is welcome to attend for general information and the general technical discussions relevant to A.T.V.

The topics covered will be the Wyong finalisation of manning and equipment for view at the Wyong Field Day - Feb 1996. Bring a 3.5" (1.4meg) floppy for updates to the club software.

Special notice to AATC committee members - committee meeting to be held at Bob's place at Bexley at 7 for 7.30 Monday night.

For more information about ATV - contact Bob the Publicity Officer on (02) 587-3491 during normal civilised hours.

AATC Inc. Publicity Officer Bob Barnes

Club news: St George

From the St George Amateur Radio Society

The next meeting of the Society will be held at the usual venue, that is in the 1st Allawah Scout Hall, corner of Bellevue Pde. and Blakesley Rd., South Hurstville at 7.30 pm on Wednesday evening the 7th of February 1996.

Visitors are always welcome to club meetings, coffee, tea and biscuits are provided and the members look forward to meeting those interested in attending.

from - Allan VK2XF Publicity Officer

Club news: Blue Mts

The Blue Mountains Amateur Radio Club invites one and all to their first meeting of the year.

The meeting will be slightly unorthodox as we will have not one, but a number of mystery guest speakers.

The venue is the usual place at Springwood High School, corner Grose Road and Chapman Parade, Faulconbridge; enter from Chapman Parade. The day is Friday the 2nd of February, 1996 at 8pm.

The customary cuppa will be served as usual.

Alex, VK2ICL
Publicity Officer

>email - ee95ajm@brunel.ac.uk

Well 6m is good in the summer with sporadic 'e' but e's each day
become a bit boring especially after your log fills up with italians
and balkan area people. When the DX is around you might need a bit of
power to break the pile up.....and when there are no 'e's about it's
as dead as a dodo. Until conditions improve I'd leave it as your main
band.

For my money I'd go for 2m, much more activity especially in the
South, up here in the sticks it's quiet. But you could get a rig such
as an IC251e (around 300UKP) and add an amplifier to take it beyond
the 10 watts it normally gives out. For example, with 70 watts and a
9ele yagi I managed to work down to Reading from Edinburgh last night.
Ok it was a prearranged sked but that appears to be the only way to
get a long distance qso these days.......

Cheers,

==========
For ROUTINE renewals, you don't use the 610 anymore, Robert. Yes - I know - it surprised me, too. Mine expires in March. FCC sent me a simple form many weeks back, which I signed to acknowledge that I wanted it renewed, and sent it back. They sent the form without being asked. Nice to have the feds doing something right!

If your address is still good in their files, you probably will get that form soon. If not you will then REALLY need a 610 to change the address!

Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 4th of February and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The RSGB responded quickly to reports on radio and TV, and in newspapers, about the Duke of Edinburgh's phone conversation being taped by "a radio amateur" or "radio ham". A press release was sent to all national newspapers and to radio and TV stations stating that "there is no evidence whatsoever" that the telephone conversation was intercepted and recorded by a licensed radio amateur. The individual named in the newspapers as taping the Duke of Edinburgh's phone conversation is not a member of the RSGB and it is firmly believed that he does not hold an amateur radio licence. The RSGB press release also pointed out that equipment capable of receiving analogue mobile phones is widely available and may be purchased quite legally by anyone.

The RSGB General Manager, Peter Kirby, G0TWW, was also interviewed by Independent Radio News, Associated Press, Sky TV News, and Channel 1 Cable TV on Tuesday and Wednesday over the matter.

A new 50MHz GB2RS news broadcast serving Central Scotland is starting today, the 4th of February, at 11.30 am. Initially, it will be for an experimental period of three months but will be continued if it proves to be a success. The transmission will be from the station of Tom Menzies, GM1GEQ, and will be on 51.530 MHz with vertical polarisation. Reports will be welcome, and should be sent to GM1GEQ via the RSGB QSL bureau.

The Barnsley and District Amateur Radio Club is co-ordinating a coach trip to Friedrichshafen in June on behalf of the RSGB. The Friedrichshafen 'Hamfest' is Europe's largest amateur radio exhibition. The coach will depart on Wednesday the 26th of June and return on Tuesday the 2nd of July and pick-ups can be arranged at pre-determined locations en route. Places are allocated on a first come, first served basis so contact the organiser, Ernie Bailey, G4LUE, without delay. He is available on 01226 716339, or 0836 748958, between 6.00 and 8.00pm.

There is a new QSL Bureau Sub-Manager for the GM0AAA to LZZ series of callsigns. He is Fred Roe, GM0ALS, and his address is 8 South Gyle Gardens, Edinburgh. The postcode is EH12 7RZ. The address may also be found in the RSGB Call Book under GM0ALS.

The Radio Amateur Invalid and Blind Club Northern Ireland Area is holding a flag day collection in the Ballymena town centre shopping complex on Friday the 9th of February between about 10.00 am and 9.00

pm. Anyone who can help for a few hours should contact David Caldwell, GI0HOW, on 01232 471370, or send a fax to him on 01232 471980, to arrange times and identification permits.

On Saturday the 10th of February, the Lincoln Short Wave Club is celebrating its 75th anniversary. The club was formed as the Lincoln Wireless and Scientific Society in 1921. There will be an exhibition and special event station at the Lawn Complex, Lincoln, from 12 noon until 5.00 pm, with a celebratory dinner in the evening. The day's events will be opened jointly by the Mayor of Lincoln, Councillor Geoff Ellis, and RSGB President Peter Sheppard, G4EJP. For further details of this, or the club's other activities, please contact John Middleton, G8VGF, on 01522 525760.

The annual Guides 'Thinking Day on the Air' takes place over the weekend of the 24th and 25th of February. A pack is available from RSGB HQ consisting of a list of participating special event stations and details of the countries which permit third party Greetings Messages during this event. Groups using a GX or similar prefix instead of a GB call are asked to contact Mrs Eva Telenius-Lowe at RSGB Headquarters by this Friday, the 9th of February, in order to be included on the list of participating stations. If you would like the pack, please send an A4-size self-addressed envelope, with 38p in stamps, to Eva at RSGB HQ.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Cancun in Mexico, three Finnish operators are signing "XF3 stroke their own calls" until Monday the 12th of February. Activity is on all bands, mainly CW. Please note that this activity counts as Mexico for DXCC, and not as Revilla Gigedo as stated in DX News Sheet.

A German group leaves home today for an operation from Christmas Island as VK9XY until Tuesday the 13th of February. They then go on to the Cocos-Keeling Islands as plan activity as VK9CR between the 14th and 23rd of February. They will operate CW and SSB on 160 to 6 metres, plus RTTY and satellites.

And from Barbados, VE4GV plans to be active as 8P9EN from Thursday the 8th until the 15th of February on all bands 80 to 10 metres, mostly CW.

Next the Rally News:

The Lancastrian Rally is taking place at the University of Lancaster today, the 4th of February. The doors open at 11.00, or 10.30am for disabled visitors.

Also today, the South Essex Amateur Radio Society Radio Rally is taking place at The Paddocks, Long Road, Canvey Island. The event includes RSGB Morse Tests on demand - candidates are reminded that they will need to take the test fee and two passport-size photographs along. Doors open at 10.30 am.

Next Sunday, the 11th of February, the Northern Cross Rally takes place at the Thornes Park Athletics Stadium on the A642 Horbury Road in Wakefield, which is a new venue for this rally. The event features the usual dealers, a bookstall and bring-and-buy stand, an RSGB Propagation Studies Committee stand and Morse Tests on demand. Please bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at the rally. Talk-in will be provided on 2 metres channel S22 and 70 centimetres channel SU22, and further details can be obtained from G0FLX on 0113 238 3622.

Also on Sunday the 11th, the Cambridge and District Amateur Radio Club Rally takes place at the Ambulance Station at Addenbrookes Hospital. The event features trade stands, a bring and buy stall and car boot sale. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For more details contact John, G0GKP, on 01954 200072.

And now a date for your diary:

The RSGB National VHF Convention takes place at the usual venue - Sandown Park in Surrey - two weeks from today, on Sunday the 18th of February. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show and special interest groups. Full details are in the February edition of Radio Communication.

A new award in memory of Cyril James, G3VVB, and aimed at the home constructor of microwave equipment, will be presented for the first time at the RSGB VHF Convention. If you have an item of home-made microwave equipment and you are proud of the way you've constructed it, then why not bring it along to the Convention and enter it in the competition? The equipment can be constructed from any design, or from a kit - what the judges will be looking for particularly is quality of construction and finish. If you cannot attend the Convention in person, you may send detailed photographs and a written description to Steve Davies, G4KNZ, whose address is correct in the RSGB Call Book.

Now for the HF contest news:

The final session of the RSGB LF Cumulative is on 80 metres today, Sunday the 4th of February, between 16 and 1800 UTC. The rules were published in last September's RadCom, but please note that the dates were given incorrectly in September. The correct dates are shown in the February RadCom.

Next weekend, the RSGB 1.8MHz CW Contest takes place from 2100 UTC on Saturday the 10th until 0100 UTC on Sunday the 11th of February. The rules are in the September RadCom.

And the Dutch PACC Contest takes place on CW and SSB for 24 hours from 1200 UTC on Saturday the 10th. Brief rules are on page 22 of the February RadCom.

Next some VHF contest news:

The 432 MHz RSGB Affiliated Societies and Fixed Station Contest is taking place today, the 4th of February, between 09 and 1500 UTC.

And next Sunday, the 11th of February, the third session out of five in the RSGB 70 MHz Cumulative Contests will take place between 10 and 1200UTC. The rules for all these contests can be found in last September's RadCom.

And now the solar factual data:

The period from the 22nd to the 28th of January saw solar activity at very low levels and the geomagnetic field at quiet levels. Only one small sunspot group remained on the solar disc, and the mean was 7. Solar flux levels increased very slightly from 72 units on the 22nd to 74 units on the 25th. They remained at that level until the 28th and the average was 73 units. No solar flares were reported. Electron fluence declined slightly but remained at a moderate level. X-Ray flux remained at its minimum level of A1.0 every day. The 90-day solar flux average on the 28th was 74 units, the same as last week.

Geomagnetic activity was "quiet", with the levels down to only Ap 3 units on the 25th. The average was Ap 5 units. The aa indices, as supplied by the British Geological Survey for the period from the 16th to the 22nd of January, increased from "unsettled" on the 16th with 15 nanoTeslas recorded, to "active" levels which lasted through to the 20th, when conditions returned to "unsettled". The most disturbed day was the 17th, with 26 nanoTeslas. The average for the period was 20 nanoTeslas, which is just K3.

I'll repeat the figures: spots - 7, flux - 73, Ap index - 5, X-Ray flux - A1.0.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 19th to the 25 of January, improved every day from 5.1MHz on the 19th, to 6.7MHz by the 25th. The average was 6.1MHz. The darkness hour lows decreased slightly from 2.2MHz on the 19th to 1.9MHz by the 23rd, but then increased to end the period at 2.5MHz. The average was 2.2MHz. The daytime highs took place between 0900 and 1400 hours. The darkness hour lows took place between 0400 and 0600 hours every day. Two short periods of sporadic E took place on the 22nd and the 24th.

I'll repeat the figures: highs - 6.1MHz, lows - 2.2MHz.

And lastly the solar forecast:

This week the quiet side of the sun is expected to rotate into view and later in the week the solar disc could become spotless. Solar flux levels are expected to decline to the high 60s. Geomagnetic activity is expected to be very quiet, but later in the week activity could increase to "active" conditions. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north, but

levels could decline towards next weekend. The darkness hour lows are expected to be about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Victor and G7 Whisky Alfa series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Quebec series.

>5000 lbs of lift required. As you can see, hot air is not going to cut
>it!

That's a rather incredible amount of lift for a weather balloon (which
of course *isn't* a hot air balloon anyway). I don't know where you're
getting your figures, but 350 pounds for 500 feet of #14 is absurd (it's
also 75% of the yield limit of the wire, so it wouldn't take much catenary
loading from the wind to exceed the limit). 500 feet of bare 14 gauge copper
wire only weighs about 6.25 pounds. That's too much load for a 10 foot Wx
balloon, of course, but you'd use something a bit thinner, say #22, which
would only weigh a pound for 500 feet. It'd break in a 24 MPH gust, though.

And I guarantee that if there is any wind at all, that balloon is going
to lay out along the ground instead of standing overhead. With a 10 foot
balloon, #22 wire, and a 15 MPH wind, that corresponds to a slant angle
of about 84 degrees off zenith. With very light breezes, the balloon may
stand as high as 45 degrees off zenith, but it would have to be dead calm
for it to approach zenith more closely than that. A lifting body, however,
like the advertising blimps, can be set to rise into the wind, and they can

approach zenith fairly closely, to better than 30 degrees off zenith. The angle from zenith corresponds to the sum of the tangents of the vector forces at work.

>For some reason everyone is thinking Wagner is stupid. We have talked in >mail about this in the past. I think that he has a good idea, and with a >lot of planing his club will do just fine.

I don't think he's stupid. I just think he doesn't have experience with tethered balloons of this nature, and that he hasn't done the math to see what angle the forces involved will yield. There are three primary force vectors, lift, gravity, and wind loading. Those are tied together by the catenary of the wire to yield the angle of repose for the system. All the data you need is in the CRC Handbook.

If you've got a *lot* of excess lift, you can pull the wire more nearly vertical for a given wind speed, but a lot of lift corresponds to a *large* balloon, and that has a correspondingly large frontal area to present to the wind, so the vectors still lead to a large angle off zenith. The advantage of the lifting bodies is that they can supply lift *without* a corresponding increase in frontal area, so they can reduce the angle from zenith a lot more. Unfortunately, that puts more stress on the tether too, so you have to go to a larger gauge, and that adds weight. It can be a vicious circle.

If he lays out 2,000 to 10,000 feet of wire, he's creating an incredible hazard if it gets away from him. The odds of it all coming down where it'll miss a power line are pretty slim. Though for a Wx balloon to lift that much he's going to have to use #30 or smaller, and it'll just vaporize when it tangles with the power lines (automatic fuse). (And it'll break under it's own weight and wind loading before it reaches full height anyway.)

Now there is another way. If he uses a large (manned) hot air balloon, he can three point tether it with heavy steel cable and just hang the antenna wire vertically below it. That may be what you're thinking of. He's not going to reach 2,000 to 10,000 feet that way, however. Something on the order of 300 feet might be possible before stresses on the central tether connection to the balloon get out of hand during wind gusts.

(Of course he could use a *huge* tethered blimp, such as TV Marti uses, and reach 10,000 feet, but I doubt he can afford that, Congress is debating whether the US can afford that.)

>other metro-areas do.... 146.430/147.430 etc...

oh, yeah, great, and why not some 1.6 MHz, 800 KHz, 2.0 MHz splits
too. Why not put your repeater's output on 146.52, and the input on
147.52, so then you can hog more simplex frequencies. The NESMC
"dinosaurs" have never coordinated a 1 MHz split on 2 meters, and I
hope to God they never do. Get a grip.

I live in Providence, RI, and I agree with the original poster. Two
meter bands sound like a cesspool of Channel 19. Even 440 is starting
to go as the 2 meters starts to get crowded around here.

>1. Have you EVER really listened on VHF/UHF/Microwave bands ?
> And I don't mean the local repeater channel how about using

> with a small beam (correctly polarised). I think you would be surprised.

...and your point is... what? I can point to the lower 25 khz of 20 meters
and compare it to 14.313 too. So what?

>2. What "snails pace" for the cw test - it maybe in the US, but what about the rest
> of the world ?
> The cw requirements vary from country to country - should't they be THE SAME
> everywhere?

No, I believe each country should set its own requirements. If a country
wants to emphasize CW, its their sovereign right to do so.

>3. I am a no-code operator and I object to being called "poor" because of it.

Then upgrade.

>4. I know several radio officers on ships (two of which are cruise ships sailing out of
the US)
> who won't use cw unless they have to - and they are the professionals. Try calling the US
> Coast Guard on cw and see how far you get !

With GMDSS, there is little reason for CW on ocean-going vessels.

Disagree - I have been op on 6m for the past 2 years with only 750mW and have worked most European and Near Eastern countries. Working DX is an *art* and does not require loads of power, but perhaps a fair bit of patience. The rewards are inversely proportional to the EIRP!

I think the difference is purely semantical. Perhaps I should have said the tone of the CW antiCW argument. Where I live no one much cares what class of license you have it is just one community. The net serves to remind me just how luck we are to enjoy this harmony.

>get some usefull discussion going here. The whole code anti-code has
>probably done more to drive away potential hams than anything else.

The "code/anti-code" isn't what drives people away. The inability
of amateurs to discuss this issue in a mature and rational manner
is doubtlessly the most repulsive factor. When people see subjects
like "No Code = No Brain", and read the vitriolic attacks originating
from both those who want to retain the code requirement and those that
want to discard it, how can they help but be repulsed? When a conversation
turns from discussing what is spoken to attacking the speaker repeatedly,
there's virtually no value.

These newsgroups are as good or as bad as we make them. If folks want
to ignore the chartered topics of the newsgroups and engage in incessant
flaming, many will be driven away, for good reason. If folks can learn
to have the kind of discipline necessary in a self-policing service, we
can make these newsgroups good.

Again, the issue isn't code/no-code. The issue is maturity and common
decency, which seems to have no correlation to license class or code
status.

I am looking for some lafayette radio, allied electronics, and heathkit
catalogs from 1957 thru 1965.
would appreciate any help and/or any leads you can give me.

thanks
bobby wb5wur

Yes ... but not without problems.

I posted a WTB in alt.ham-radio.am last week, and it duly appeared.
Since then there've been no other postings in that ng.

I sent the WTB posting again last night and it got bounced back by
my ISP as 'No valid newsgroups specified'

>The primary reason for the existence of amateur radio today is
>public service. At one time it was for experimentation and development
>of technology, but the electronic's industry has pretty well taken
>over that task.

gary@ke4zv.atl.ga.us (Gary Coffman) Responds :

:I disagree with this almost totally. It's true that amateurs do a
:bit of public service communications, and on occasion a smidgen
:of emergency communications, but for the most part that's a thing
:of the past. What with modern trunked public service agency communications
:systems, and cellular phone, most emergency, and what used to be called
:public service, communications are now handled other ways, and more
:directly by the involved parties. Amateurs still have a role to play,
:but as noted in the Op-Ed in the current QST, that role is more one of
:a trained volunteer responder for an agency than as a communications asset.
:The fact that the amateur may be able to bring an alternate communications
:asset to the party is almost a perpherial side issue.
:Where amateur radio maintains a unique role to play is in experimentation
:and development of technology, most notably the latter. Amateurs serve
:as the world's largest communications beta test organization, and they
:*pay* for the privilege of doing it.

Sorry guys,
I feel your both missing the boat. Amateur radio's purpose in the beginning was, without a doubt, experimentation and the developement of a new and exciting technology. It then evolved into a means of providing a public service. Now, Amateur Radio has evolved into something else, a hobby.

It can be still be used as a vehicle for experimentation, or a means of providing a public service. But in the end, its a hobby just like fishing. Is that bad??? Probably not, if we keep that perspective in mind. oftware developement has become the new horizon whereby a relative amateur can write a program and advance the leading edge. Also, much public service traffic can be sent by other more efficient means. Does that mean that Amateur radio is obsolete? Not necessarily. Again, Its just evolved.

Consequently, the structure we use to license new hams also needs to evolve. I think that a new potential ham ought to be tested for proficiency in

the areas they intend to operate. Tests wouldn't necessarily be easier, just pertinent to the operating priveledges sought. Many of the people I see at our VE sessions are just looking for a reliable means of local communication. Why then do we ask them the length of a 1/2 wave 40 meter dipole. Thats not to say some of them won't advance to more exotic forms of communication in the future. If we test them on what they need to know for the communication mode they seek, who know's, they might actually study the material instead of memorizing the questions and answers. Where do I suggest putting the CW testing? Right where it belongs, to qualify someone to operate in CW only sub-bands. If the rare DX hangs out there, they'll learn the code to chase it providing thats they're interest.

In other words, to qualify for a fishing license I shouldn't be required to show proficientcy with a fly rod. After all, if they aren't biting i'll stop at the restaurant on the way home for a fish dinner.
But lets not forget, in some areas of the world if they're not biting they're not eating.

>
>I was hoping to maybe work some dx, so I was thinking about 6m, would I find
>much out there (my qth is 12 miles from Gatwick airport (in a valley :{)).

Six is becoming popular, but due to the current state of the sunspot cycle you won't find much beyond local activity except during the infrequent band openings. *Then* it can get real busy. But if you're going to restrict yourself to one VHF+ band, I'd think seriously about a 70cm or 2m SSB rig before I'd set up for 6m. That's because there are many more operators, and more enhanced propagation modes to explore, on those bands. Your "dx" won't be global in scope (unless you go for EME), but it will be more frequent and more hectic as you chase tropo, aurora, and satellites.

However, if you're patient, a 3 element beam and a 100 watts on 6 meters can give you globe spanning results when the band does open. Meteor scatter also works better here than on 2 meters. In 4 or 5 years when the sunspot cycle comes around, 6 will be open to somewhere in the world almost daily.

Gary

William,

The NIR-10 4.0 upgrade should allow you to duplicate ANY 3.0 setting,
since all the original code is still there - just with added features.
I made sure of that when I wrote the upgrade code. If you need a set
of the old v3.0 EPROMs to compare with, give me a call at JPS.

1774. Re: ITU non-signatory countries & QRM on ham bands

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-01 00:00:00 UTC
From: Joe Fitter BV/N0IAT <joentam@transend.com.tw>
Message-ID: <4eq7o8$cn6@tilde.csc.ti.com>
Source record: 231274

Eric,

As I recall, from my days living in Japan, the 160M bandplan is
a very small slice of thet US amateur 160M spectrum. Further, I believe
it is CW only allocation. I dont recall the exact spectrum
authorization, but 1.907 plus and minus 10 Kilohertz comes to mind as the
official plan for JA. I cant recall exactly, as I never had antennas
for top band while living there.

Please remember that the 160M, 80, and even 40 meter bands different
pending ITU zone. For example, most nations within ITU zone 3 have only
7.000 to 7.100 exclusively authorized for amateur service...anything
beyond that is "fair game" for broadcasters. Also, some HF bands are not
exclusive allocations to amateur service. 30 meters, for example, is
shared by amateurs in every zone and is even power restricted in zone 2.

While I agree with your point of QRM being caused on the ham bands that
are "solely allocated to amateur use", such as 20M or 15M, I can not say
that I agree with the complaints about 40 or 75/80 or 160 meters. These
band plans are very different pending ITU zone, so, just because someone
is interfering with the "California Kilowatts" doesnt mean they are
breaking ITU regulation per se.

The real problem with interference is that most coutries violating the
exclusiveness of the ham bands do so because the countries themselves
have few active radio amateurs to "call them" on such violations. Having
lived overseas for over 5 years, including stints in Europe, Japan, and
Asia, I can say that we as amateurs are faced with far worse problems
from bootlegger, illegal, unlicensed stations than from occasional
broadcast interference from someone in another zone, or a clandestine
radio broadcast station. I find most interference is from non amateurs
using amateur gear to conduct day to day business. This
"bootleg" issue, I believe, is a a severe threat to our precious radio
spectrum, much more so than the few unruly nations of the world that
dont follow ITU regulations. Unless and until governments recognize
radio spectrum as a limited resource, such violation will continue to
threaten our radio spectrum and will continue to be a detriment to ham
and other radio services utilizing the HF spectrum.

As for a blockade on Japan, it has been proven that trade sanctions often
hurt the blockading country more than the blockaded....just look at what
happened to French exports to New Zealand after NZ boycotted French goods
due to the Nuke Tests in the Atols --- imports ROSE 14% due to "panic
buying".

Just my view of things....

FACT: AMSAT already supports satellite contesting, for AMSAT promotes and sanctions the ARRL Field Day "contest" on satellites. Don't believe me? Check out the AMSAT WEB homepage.

Some may argue that the ARRL Field Day event is not a contest, but call it whatever you want, for under the cover of the words ARRL Field Day "event", its a CONTEST!

So since AMSAT "supports" satellite contesting, why woun't AMSAT support other satellite contest?

Some say they don't want satellite contesting to ocure because they don't want all the "BIG GUNS" to hog all the satellite battery power. So what! AO-13 is going to crash anyways!!! Until then, the solar pannels will recharge the batteries. Lets get the most use out of the the bird before it burns up!

I think its more of a "religious" and "political" issue. AMSAT needs to be in political alignment with ARRL, so they allow the ARRL Field Day contest to occure. However, those powers to be don't personally like contesting, so they don't support satellite contesting!

Kind of two faced double standard if you tell me!!!

Tom...

>all we want..it won't help.

Maybe most peoples outlook is different. The above puts it in a nutshell.
Remember your first contact? Think back to your first NOVICE CODE contact.
Did it mean anything to you? In November I had a QSO on 10M with a 10 year old
ham who had a friend over. He put his friend on for a short time and we talked
about joining the ranks. I sent both the operator AND the guest a QSL.
Yesterday I got the operators card in the mail. It was one of his first
contacts on 10M phone and he was quite excited. His friend was now working
on his ticket. That QSL you don't send or respond to could be someones first.
it might be the little extra touch that keeps the hobby from being for the old
and rich. I have sent many SASE cards IF THEY ARE ASKED FOR. If you want or
need to be SASE'ed, please tell the operator. My cards are sent out that day
or at the latest the next day. To keep the cost down I send each card as a
postcard unless requested different. I like receiving them as postcards
because of the postmark on the card. My cards are not fancy, I generate them
on a laser printer using card stock. My most cherished card is hand-drawn on
cardstock from a 9year old novice from Missouri. He apoligized for sending it
on the card.

Next time you blow off a QSL, think about just what it could possibly mean to
the other party.

I's like to join this interesting discussion.
I am Curator of *QSL Collection*, with 800.000+ cards on file probably the biggest one of its kind worldwide. Our earliest ones are pre-QSL-QSLs (handwritten cards or letters), followed by those where the operator carefully and proudly lists each and every country he has worked or heard. The latest cards date from the most recent DXpeditions (10.000 contacts in the pile-up...).
We not only collect QSLs, awards etc. to preserve them for the future, we also do a lot of research into amateur radio history - and here again QSLs, and by far not only the "rare" ones, are a good starting point.

FYO I add a few explanatory remarks. You'd perhaps like to support our project.

73 de Wolf OE1WHC
100% QSL

FAQ - FREQUENTLY ASKED QUESTIONS - QSL COLLECTION

Q:
What are the aims of QSL COLLECTION?
A:
We collect, keep archives and reasearch QSL cards, awards and related material - both from amateur radio and broadcasting stations - from the pioneer days to the present. We make the cards available to publishers and for general research, and exhibit them in public. The group is becoming a reliable source for scientific studies and articles in ham radio magazine.

Q:
Is this a private initiative?
A:
No, we are an International Committee, registered as an international foundation in Vienna, Austria.

Q:
Who supports QSL COLLECTION?
A:
A growing number of national amateur radio societies and broadcasters, e.g. WIA in Australia, DARC in Germany, ORF in Austria; many prominent hams, oldtimers and newcomers - more than 200 so far.

Q:
How can I join QSL COLLECTION?
A:
Either by membership ($ 30,-- per annum), to support the voluntary work of

the gruop, and no further obligations involved;
and/or by becoming a sponsor offering certain help - e.g. a financial contribution; sending cards no longer needed; acting as QSL Manager for a country or region, to reduce individual postage expenses; making a bequest, so that a personal collection will be sent to the group at a later stage; volunteering as monitor, thus helping to keep the files up-to-date...

Q:
How is the collection organized?
A:
There is a basic file with ONE card from each country, prefix, region (such as Oblasts, Counties, Parishes, DOKs...), special event stations, IOTA islands, and so on; and there are special files, such as ONE card each from each operation from rare DX spots, operations of the "Big Guns", prominent operators (kings and queens, statesmen, entertainers, artists...). There is also a special file of preward cards. Especially important collections are being kept in their entity.
NOTE: The Collection includes, of course, QSLs sent *to* SWLs, but *not* reception reports (SWL cards), except prewar ones.

Q:
What happens to the other cards?
A:
They are being carefully filed and stored for further use. What you might consider *trash* now, may be as valuable tomorrow as cards from the 1930s to the '50s are today - especially with dissolution of old countries and the birth of new ones.

Q:
How can *I* help?
A:
- Ask for our list of cards missing/cards on file. The rare QSL is always the one missing - perhaps you have a few QSLs to spare.
- If you work a *new one* (this might just be a new prefix, county etc.) send a SWL report to the station, together with your own QSL, and send this additional QSL to the Collection.
- Don't throw magazines, books and other background information away. The group may need it for its research work.
- Keep the rarest cards in your collection in a special file, together with a note of dedication: Make sure they will not be lost once you become a Silent Key. Invite other hams to follow your exmaple.
- Spread the word. Talk to the next of kin when a befriended ham passed away.

Q:
Should I send my cards right away?
A:
Please don't. Contact the group first. Tell them what you have to offer. If you cannot cover postage costs yourself, they will try to reimburse you from what little budget they got.

Q:
How can I contact the group?

A:
Letters to: QSL COLLECTION, POB 2, A-1112 Vienna, Austria-Europe
Parcels to: QSL COLLERCTION, c/o Radio Austria International, A-1136 Vienna,
Austria/Europe

>1. Scott posits that QSL's are "part of being an amateur"
>and it is our duty as a matter of courtesy to QSL.

The amateur radio hobby is NOT a poor mans hobby. While there are some of us who operate with inexpensive equipment, MOST of us have spent thousands of dollars on equipment, over a period of time. I think of QSLing as only a small part of the hobby and is certainly not a duty, but a courtesy.When we take into consideration what MOST of us have spent on our ham equipment, the cost of QSLing should not be very relevant. Kind of like buying an expensive automobile but not able or wanting to spend a few bucks on accessories.

As far as not participating in the QSL game, remember that it is only a courtesy, not a duty. So the question arises as to whether we should be courteous or not?We all know how the bands abound with courteous operators these days, right?

This question could be debated for a LONG time. Why not put it to rest with the fact that we should treat others as we wish to be treated. If you are satisfied with being treated rudely and being ignored, then perhaps you should continue doing so to others. As for me, I prefer to remember that some time in the future, I may need a QSL card from someone (for whatever purpose). In addition, it gives me a warm fuzzy feeling to know that I have made someone happy today.

all of us should treat others as we would like to betreated. If you are satisfied with being treated rudely, then by all means continue to rudely disregard QSL cards you may receive. I don't feel it is a duty to QSL, only a courtesy. But then we all know that courtesy abounds on the amateur bands these days, right? I think that returning a QSL card falls in the same category as there..that will never change, nor will the fact that many of our QSL cards will never be answered. This is a fact of life and we can debate it all we want..it won't help.

1783. Canadian operating Stateside...

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-01 00:00:00 UTC
From: bs872@FreeNet.Carleton.CA
Message-ID: <DM3rK3.x7@freenet.carleton.ca>
Source record: 231283

A question: I am planning on attending a Scout Camp in New York state in September and I want to operate 75m from the camp.

Do I require a special permit? My licence is Advanced level (I don't know the American equivalent).

If I can operate, do I use the Canadian 'phone band or the American band?

I assume that I would attach the suffix /W4 to my call, correct?

E-mail answers are preferred to ROSS@KRDC.INT.ALCAN.CA or the address on my signature.

Thanks.

> it burns up!

It is not a matter of the BIG GUNS accessing the bird... but of PROPER
and respected operating procedure.. Like not operating stronger than the
downlink beacon !

It does not taked a BIG GUN to trash the transponder

I have even heard FM signals on the thing !

It is either a lack of knowledge or RESPECT and proper operating procedures.

The BIG GUN was indead a problem on AO-21 but that is another story.

This is quite correct. The callsign of the early Marconi Co.
experimental broadcasting station at Writtle, near Chelmsford, Essex,
was "2MT" - affectionately known as "two Emma Toc". It was in operation
for only 11 months, from 14 February 1922 until 17 January 1923,
initially on 700 metres but moving to 400 metres on 22 May 1922 at the
request of the General Post Office. The output power was 200 watts.

1787. Requesting contest QSLs [was QSL etiquette]

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-01 00:00:00 UTC
From: Kevin Schmidt <kschmidt>
Message-ID: <4er9es$2i1h@theory.tc.cornell.edu>
Source record: 231287

I have read the "To QSL or not" topics. I personally reply to
all QSLs received. I also find it hard to believe that anyone, who has
time to get on the air, is too busy to write "confirmed by W1ABC", sign
the card they received, and stick it in the supplied SASE. But if
someone wants to toss away all the QSLs and SASEs he receives that's
his right. It is amusing to hear a contester suggest that he expects
operators to ask, during a contest contact, if he will reply to a QSL
request. I can see it now instead of something like this. (BTW, In my
imagination, this is in morse, and op1 is sending 35 words per minute
and op2 is sending 15 wpm.)

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY
op1: tu cq test de w1abc

I now realize that at least one contester wants:

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY and by the way, I really need Maine to finish my WAS
if I send you a card with an sase would you be willing to send
me yours k
op1: r no k
op2: ok 73 w2xyz
op1: cq test de w1abc

This may reduce the qso rate somewhat for op1, but now that I know
what's expected...

>
>TIA 73s

The FCC will mail you a Form 610-R (renewal short form) at about 90 days before your license is to expire, assuming your mailing address is up to date with FCC. If you don't get the Form 610-R by 60 days bfore your license will expire, then send the FCC a regular Form 610.

If you need a regular Form 610, you can get one from us if you provide us with your mailing address; or you can get it electronically from the FCC as follows:

FCC Fax on demand - 202-418-0177 (request form 000610).

or

World wide web - http://www.fcc.gov/Forms/Form610

or

Internet - ftp://ftp.fcc.gov/pub/Forms/Form610/

1789. Re: To QSL or not to QSL, that is the question!

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-01 00:00:00 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1996Feb1.174220.29925@ke4zv.atl.ga.us>
Source record: 231289

In article <DM1rrr.CDt@world.std.com> barnaby@world.std.com (Richard Barnaby) writes:
>
>My book still has QSL = "Can you acknowledge receipt?"
>I guess its a matter of interpretation here. I always assumed this
>meant "Can you acknowledge receipt of this message by HARD COPY", with
>the "meaning" being, "Can you confirm IN WRITING that I made this
>contact with you via radio"

QSL has two official usages. "QSL?" means "Do you acknowledge receipt
of my traffic?" "QSL" means "I acknowledge receipt of your traffic."
They are procedural signals intended to be used for *over the air*
message handling, nothing about postal cards or snail mail is implied.

1791. Re: What does CQ mean?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-02 00:00:00 UTC
From: dringer@access.mountain.net
Message-ID: <4es5lb$3rc@news.mountain.net>
Source record: 231152

I had always thought that CQ was "come quick" but it could be an "old wyfe's tail."

The distress prosign was CQD (the D stood for "danger"?)

When the Titanic went down they transmitted CQD, then tried the (then) recently adopted distress signal SOS - proported to be the
first use of SOS.

No, I don't have the references for the above. Just passing it along.

Dan, K8WV

>
>Gary

Who counted? Just for grins, I looked at the last official
numbers released by FCC that I have. They show:

--Technician Plus 139,910
--Technican 116,599

Maybe I didn't lie after all. I was wrong once in my life --
the time I though I was wrong, but wasn't. <BSEG>

> an ever decreasing string of CW uplinks.

This "contest" already exists. It is called the ZRO test and measures
how far below the beacon you can copy a CW signal. This is why I assumed
an HF style contest.

> If they are considering a contest like we hear on the HF bands we
> will all suffer the results of transponder overload.

Amen.

The February 1996 edition of Ham Radio Online is available at
http://www.accessone.com/~vbook/hronline.htm

New articles are available now and we will be adding 1 to 2 new articles
each week.

Ham Radio Online has up-to-date news about Amateur Radio from around the world,
feature stories, real-time propagation and auroral condition reports, real-time
earthquake and severe weather conditions for emergency communications planning,
online humor section and the Ham Radio Online Library with fully indexed (find
any section with just a mouse click) Part 97 rules and regulations.

And we plan to offer some totally cool new services during the coming month. As
always its free and free of ads.

Thanks to you, we had over 10,000 readers stop by during January!

Please enjoy!

No, according to the news reports, it was NOT Burt Fisher. For one, I think he teaches in another district. Then again, Burt Fisher may be a pseudonym, and his signature line may be inaccurate.

Maybe in the U.K. (I don't know), but the FCC rules only specify that
external power amplifiers for use *below* 144MHz require type acceptance.
Look at 97.315 and 97.317.

1801. ANNOUNCE: ARRL Workshops and Forums in Florida

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-02 00:00:00 UTC
From: gars@afn.org
Message-ID: <3110325f.138191@usenet.afn.org>
Source record: 231162
Cross-posted to: afn.hamradio.forum,afn.hamradio.bulletins,rec.radio.amateur.misc

The following are four (4) announcements about various ARRL workshops and forums in the next month in Florida

****

ARRL Technical Workshop
"Computer-Aided Antenna/System Design in HF/VHF Stations Including the Effect of Local Terrain"

by Dean Straw, N6BV - ARRL HQ Sr Asst Technical Editor

Friday, February 2, 1996 - 12:00 noon to 5:00 pm
Miami Airport Marriott

Discover the "System Approach" to the design of antennas -- learn about propagation, antenna selection, transmission line selection and putting it all together.

This workshop will demonstrate computer modeling and analysis of HF systems plus VHF Yagis and other gain antennas. You'll do hands-on testing of antenna designs, including crude field-strength measurements. You'll explore the effect of local terrain and environment on the elevation pattern for antennas, and see the launch angles required for efficient HF propagation to the world.

The charge for 5 hours of workshop, instruction and the accompanying workbook is $15 for ARRL members and $20 for non-members. You may also purchase the "ARRL Antenna Book" (the 736-page 17th edition includes IBM-compatible software for Yagi analysis by 3 authors) for $30 plus $5 shipping.

To take part, give your name, call sign, address and check or credit card number to: Rosalie White, WA1STO, at (860) 594-0237 or send to: ARRL CAD Workshop, 225 Main St., Newington, CT 06111.

Space is limited; respond by January 24. Those who attend for all 5 hours will earn .5 Continuing Education Units.

****

What: Youth Forum - for those who are 16 and under

Where: Miami Tropical Hamboree - Miami, FL
Dade County Youth Fair & Expo Center

When: Sunday, 4 February 1996 - 2:30 pm

Who: Youths (licensed and unlicensed) 18 and under get in free with a student pass from schools; age 10 and under get in free with an accompanying adult.

Why: You'll take part in hands-on demonstrations. You'll meet young people who will talk about their exciting on-the-air activities.

***

What: Educator's Forum - School teachers, volunteer instructors, recruiters

Where: Miami Tropical Hamboree - in the Tower Building at the Dade County Youth Fair and Expo Center.

When: Saturday, 3 February 1996 10:30 - 11:30 am

Why: Educators will talk about their successful teaching techniques. You 'll take home free materials.

See you there!
Sponsored by ARRL Educational Activities Dept.

****

What: Educators Forum

Where: Orlando Hamcation - Orlando, FL

When: Saturday, 17 February 1996 - see convention program for time

Why: Teachers will talk about what works in their classrooms. You'll take home free materials.

Spread the word!
Sponsored by ARRL Educational Activities Dept.

If the FCC would accept my old 2nd Class Scout certificate as a 5WPM
CSCE... I guess it's more than a year old though, and I topped out at
"STAR" and only Life and Eagle are for life, so I guess it doesn't count
:-)

> since we've had a code free ticket since 1991, and there's about 150,000 folks
> in that group, you can't say for sure that all hams can copy.

And who knows how many of the old-time rag-chewers have copied anything since
their last exam. Are more old keys becoming silent keys than Tech-'s
upgrading? Don't know. Total number of hams _is_ climbing, but the pool of
key-bangers (not counting people doing CW via MFJ/AEA multimode
controllers!), what are known in some circles as "Real Hams",
could be declining.

> you haven't been in
> touch with most boy scout groups if you assume that boy scouts can copy
> code..

According to a Ham I heard griping on 2m, the Boy Scouts no longer require
morse or semaphore; you can pick ANY code you want. I guess I could pick
ASCII. :-) (Or EBCDIC??? :-()

KINGSHILL, VIRGIN ISLANDS. The FCC has denied Herbert L. Schoenbohm's application to renew his amateur service licenses, Kingshill, Virgin Islands. (WT Docket No.95-11 by Initial Decision of Administrative Law Judge Edward Luton [FCC 96D-01] issued January 26, 1996)

He can delay being shut down by appealing this decision to the FCC's appeals board. He can remain on the air until final determination is made. And that could be an appeal to the Supreme Court.

But Herbie has LOST ANOTHER ROUND! Hooray for the good guys!

Don, K1IDF

Boy, oh boy. I thought I was the only one that felt like that.
I guess the trend will be to not only include an SASE and a $1, but we
should also pay (in advance, I am sure) the cost of the electricity to
operate the other ham's station. Then, our share of the depreciation on
his station. Let's see.... $4800 (rig) + $1200 (antenna/tower), useful
life 6 years, 5 contacts per month (can't over due it now). I guess we
should send an SASE along with about $47 in cash (no check, of course).

What ever happened to friendship. Are some of us in this for the money???

Come on, lets enjoy this as a hobby.

>Now that my 2/70 hand held has just packed up I was thinking about getting
>a ssb rig. My first problem is what frequency to get (i'm only a B license
>(above 30 Mhz only), and the second is what rig ?

Hi Andy,

Here in Europe the situation is the following: 6 m becomes very busy during
the summer months, when you will be able to work entire Europe with 10W
or so and a modearte beam. Now in the winter it is quite quiet.

On 2m SSB you may find some activity every weekend, but since your QTH
is in a valley, you may find during band openings that the OM's in better
locations always catch the DX first. This is not so critical for 6 m
sp-E.

On 70 you might also be listening to the noise for most of the time.
the higher up you move in frequency, the more critical becomes you take-off.

My advice: go for 6 or for the lot.

1809. Using DSP to emulate a TNC

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-02 00:00:00 UTC
From: socci@bns101.bng.ge.COM
Message-ID: <9602022002.AA02652@bns101.bng.ge.com>
Source record: 231170

Hey guys/gals/other:

I am trying to use digital signal processing to emulate a TNC for packet communication. Right now, I'm at the very start of my research, so I'm looking for resource information.

1) What are the best WWW locations for DSP information?
(My crawler shows quite a few, but I don't know which ones are useful)

2) Where can I find documentation detailing how a TNC operates?
I know vaguely what is in there, but I really need the details.

Feel free to respond via this thread or by direct email.
Thanks,
Vince

The answer is no farther than Part 97. You'll find the only amateur radio
gear requiring type acceptance are exernal power amplifiers for use below
144MHz (97.315, 97.317).

1811. Which 2M mobile to get?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-02 00:00:00 UTC
From: comptnce@airmail.net
Message-ID: <3111a04c.140847260@news.airmail.net>
Source record: 231172

I want to get a new 2 meter or 146/450 mobile. I want small size, intuitive ease of use, and a bright display with large numbers, since my eyes aren't what they used to be. I've read the poop sheets for the Icom, Kenwood, and Yaesu radios, I've seen them, and have narrowed it down to the Icom 281H ($379 locally) or the Kenwood 733A ($585 - $85 rebate). In your experience, any cons or special pros for these rigs? Do you have any better recommendations? I've looked for reviews, but CQ didn't have any. How 'bout QST? Is there a ham magazine nowdays especially for VHF/UHF equipment? Is there a place to buy with better prices than the others?

There are a few repeaters in southern California that use "odd" splits (each one has a different I/O spacing), but for the most part new systems stuff themselves onto existing 600 KHz spaced channels. Not many new systems considering how stuffed the band is here already, but use of CTCSS access (PL) helps a lot.

Hmmm, well in rec.radio, maybe that works. But I'm not sure that'll make
a good battle-flag here in a.s.d! Besides, some of us have developed a
bizarre fondness for Burt. (Hey, I read Dilbert, too!) Years ago I used
to have a pet black rat snake I was sorta fond of, too. He smelled funny,
but he was great for getting rid of dead mice...

And aside from some of the personal attack flame-wars, *some* of Burt's
inanities stimulate thought and replies, which isn't always a terrible
thing.

In response to Bill DuBroff, who writes:
> Not too good Vince when you have to go back 7 years to find someone
> who pushed for easier exams. As for this net, I have seen nobody in
> the current time period that has pushed for no-code and easier
> exams.

Wrong again, Bill, for the upteenth time. Petition RM-8260
came three years ago, and carried over into 1994. In addition,
the fact that someone felt the same 7 years ago doesn't (and
hasn't) diminished their thoughts, or efforts, today. If you
haven't seen anyone pushing, you're not looking. Attempting to
restrict your comments to this net (i.e., "as for this net, I have
seen nobody...") doesn't get you off the hook. This net is not the
be all and end all of all human response to the no-code, no-theory
issue.

> As for being beneficial, it will never be "shown" until it is
> tested, which gets down to the feeling of the majority that it is
> or is not beneficial, and that feeling should control - the
> practioners (as defined as a majority) of the hobby should define
> the boundary conditions, not the FCC or any single person or group.
> With respect to 97.1, you claim but have no evidence that no-code
> would reduce its thrust. Your declaration is not adequate.

Wrong again, for the upteenth plus one time. If it can't be shown
from the get-go, it is illogical and counterproductive to proceed,
from the scientific and engineering points of view. And as has been
stated previously by K4KYO, an organization's credibility suffers
when the majority consists of those who have just entered that
organization. Disaster waits if one attempts to rely on newcomers
to dictate the new rules of the game. In the case of ARRL, they
have enough trouble on their hands today and realize they have to
think things through three times before even beginning to consider
alterations. Thus, in summation, it is YOUR declarations that are
inadequate.

Regards,
Vince, WB2EZG

In general there are enough listeners out there on any particular satellite
pass that calling CQ will get you a contact. The birds are congested enough
that finding a quiet spot on the more popular ones (e.g. RS-10/11) is hard
to do. Adding extra traffic with a satellite-focused contest would overload
them such that you'd probably have *less* chance of making a contact.

On top of all that, add in the temptation that contests bring to bump your
power level and elbow your way onto the bird, and you'll end up with what I
heard a few years ago during Field Day. Someone with a very strong signal
kept calling CQ CQ CQ and his call sign 3-4 times, over and over, waiting
a bare fraction of a second between each call. Since this was on AO-21,
an FM bird (one QSO at a time), all he did was monopolize the entire pass
with his calling. He never did make a contact, nor did anyone else.

A Satellite-focused contest would be an interesting experiment to see how
our Amateur satellite fleet handles extreme overload, power management, battery
failures, and other such things, but I'm not sure it'd be worth it.

If you want to have some long distance chats with a Tech license, satellite
communication is the way to go, but you don't need or want a contest to "help".

I vote NO.

So we get rid of CW. What is next? How much easier do people want it to be to get a license? Morse is required, so just do it. Oh I forgot that is a bit of work. We would not want to work for our reward.

This whole anti CW thing is a reflection of what is happening everwhere. Construction contractors and truck drivers don't want to test for a license either. Why? Because they are lazy and have no desire to devlope skills. The same can be said about ham radio. The anti-CW people are just pissed because there are people like me who demand they work for a license. Learn a new skill, and then use it.

For those of us that do use CW and enjoy it. Brag about it, you have a skill that was work to get and some folks don't have.

In response to Bill Sohl, who writes:
>Well if that is the sum and substance of those pushing
>lower theory testing, then your assertions in this venue
>that put an implied equal weight on it are totally off the mark.

As stated to Bill DuBroff, that ISN'T the sum and substance
of those pushing for change. And whether we assign "equal weight" or
not has no bearing whatsoever on this issue. ORACLE, with
the sum total of only six people, was able to advance the
no-code HF proposal. I submit YOU have missed the mark, Bill.

>For the sake of this discussion, I think it is safe to
>say that NO ONE has suggested in this USENET
>arena that we should lower or eliminate theory testing.
>Additionally, even if you can point to one or two individuals
>that have, you know very well that it is an extreme minority
>viewpoint that isn't shared by the vast majority of
>hams on either side of the code/no code issue.

As for what is a minority or majority is up to conjecture. The
statements have been made, and that indicates possible trouble. As
for the sake of this discussion, your pointing to people
on Usenet skews the issue. My comments regarding easing theory
tests had to do with Fred Maia and others, not necessarily
specific participants to the Usenet. Again, as stated to DuBroff,
the be all and end all of discussion on this issue doesn't reside
solely with Usenet.

>Restoring what code exams? Are you now saying the
>no code tech license should be eliminated?

Not at all. Where do you reach that conclusion? This has to
do with HF code requirements, and one minute solid copy, versus
a multiple choice test, which can be passed by pure luck.

:Otherwise, one comes to the inescapable (and correct) conclusion
:that there's a movement to ease requirements into the Service,
:period. Note carefully also there are others who are questioning
:the value of exams in general, right on this discussion group, so
:again, one cannot declare "no one is pushing for easier theory
:requirements."

>Who and how often? I restate my comments above.

Many, and very often, as one can see by going through the
postings over the past month or two, just on Usenet alone. Have

you also monitored the HF/VHF bands lately? Where have you been?

:The problem with the eased requirement scenario is that it
:has yet to be shown that eased requirements would be
:beneficial to the Amateur Service.

>This is only an issue if there is any movement to ease
>requirements (other than the CW). Otherwise, this
>is just a diversion on your part from the basic question
>of code/slow code/no code debate.

Eased requirements have ALREADY taken place by means of
rote-memorized theory exams and multiple choice cw tests. The
key is to restore the condition where one must learn to
apply basic material, not simply memorize it.

:If Part 97.1 is to remain a viable component of the Amateur
:Service, easing of requirements does not fit in.

>Changing requirements does not need to simply translate
>into easing requirments.

Perhaps, but that's the way it's gone!

:If, on the other hand, ARRL and FCC wish to declare the new
:purpose and goals of the Amateur Service, it would be more
:professional of them to do it now, and get on with rebuilding a
:new Service.

>No one in this newsgroup seems to be suggesting this
>as a possibility other than yourself. The sky is not falling.

One wouldn't know if the sky is falling or not for the Amateur
Service, versus a personal radio service. The FCC is fairly
inactive these days, and no one seems to know what their
agenda is for the amateur service in the long run. It's time
we found out.

:In that way, at least, no one operates under false pretenses.
:The new challenge then becomes justifying one's frequency
:allocations under the new rules of the game.

>Or it isn't an issue if none of the above is true, which is
>exactly what I'll assert here.

You can assert what you wish, but now you'll have to SHOW it.
While you're figuring it out, there's no reason to become unglued
because there are those of us who simply want to mind the fort.

Regards,
Vince, WB2EZG
Life Member, ARRL

1825. Advice Wanted on Buying 2-Meter Mobile Rig

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-02 00:00:00 UTC
From: david_b3@sfov1.verifone.com
Message-ID: <1996Feb2.091400.4773@sfov1.verifone.com>
Source record: 231186

I'm in the market for a 2-meter mobile rig, and want to know anybody's thoughts on the following scanarios:

1. Buy a new, basic Kenwood/Yaesu/Icom, which I can get for around $270-300. One year warranty. Reliable gear, but after the warranty runs out, potentially high repair bills (my 3-year-old Alinco DJ-580T HT has been in twice for repairs since the warranty ran out).

2. Buy a new Radio Shack HTX-212, which I can get for $299, with an optional 5-year warranty for like $40-50. Not as good as the Kenwood/Yaesu/Icom rigs, but I won't have to shell out additional bucks over the next 5 years.

3. Buy a used K/Y/I rig, which would be cheaper, but if anything goes wrong, potentially big repair bucks.

4. Buy a used RS HTX-212 rig, for which you can still get a 5-year warranty, if it was purchased recently.

Money IS an issue, and I'd like to get the best rig I can for the least investment over the next 5 years.

ANY and ALL advice is appreciated!

David B. Barnes KD6DMS david_b3@verifone.com

1826. DC connectors and wiring

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-02 00:00:00 UTC
From: gerryc@airmail.net
Message-ID: <gerryc-0202961130000001@dal20-19.ppp.iadfw.net>
Source record: 231187

ARRL Field Service, and Dallas RACES DC Connector Standards

The DC connector as recommended for Dallas RACES is the same as the one
that ARRL Field Service recommends, the 2 pin Molex connector with .093"
pins for DC.
The drawing for this connector configuration can be found in the ARRL hand book.
Having a standard connectors for DC and antennas and audio has proved it
"worth" time after time during tornado and weather situations.
During the emergency communications efforts after the Lancaster
tornado, lots of amateurs who were non RACES, volunteered there equipment
to help. Because of the variety of connectors much of it could not be used
during the first few hours of the effort. There simply was not time to
modify the equipment during the initial effort.

Amperage Rating

Some people will argue that ARRL field service people "blew it" and
this DC connector is not good for High Power (50 to 70 watts) 2 meter rigs
as the connector is rated at 8 Amps. Please note that Radio Shack was very
conservative with manufacturers ratings. This connector from Molex is
actually rated at 12 amps.
The connector was tested by my Employers Quality lab at 13.8 V at 10
amps. After 50 connect/disconnect cycles the drop across the connector was
50mv at 10 amps, and after 200 connect/disconnect cycles the drop across
the connector was 57mv at 10 amps. This connector will withstand a whole
lot abuse and still work considering the "intermittent duty" nature of
most mobile radios.

Parts and Part Numbers

This connector can be found by the Radio Shack part number 274-222.
This part number is a kit that contains 1 each male and female shell and 2
each male and female pins.
AMP and Molex make identical connectors that are directly
interchangeable and in fact carry the same part, under identical part
numbers. For those wishing to buy in bulk, the AMP/Molex part numbers are:

Male shell 03-09-2021
Female shell 03-09-1022
Male .093 Pin 02-09-2103
Female .093 Pin 02-09-1104

Each year after the National Weather Service "Skywarn" school we have a
"connectorizing party" to introduce new RACES members to the connector
standards and to help any who might be having trouble getting there radios
standardized. This is done for the price of the connectors or they can

provide there own.

Crimping or soldering

Our tests on this connector showed that most of the failures on this connector came not from the connector itself, but from improper field crimping. The failed connectors we tested failed because of crimps made with "any tool available" rather than the crimping tool recommended by AMP/Molex. The improper crimping caused arcing with the associated carbon contamination. Further tests showed that even improperly crimped connectors performed to spec. or better if soldered. For this reason in Mobile applications, CRIMP and SOLDER.
There is a NASA specification that calls for connectors to be "crimped when possible". It should be noted that this specification also covers the manufactures crimping recommendations and tooling.

Wire

Another failure mode that was noted was not from the connector but from the wire used with the connector. For Mobile applications 18 AWG (American Wire Gauge) is rated for 14 to 18 amps. Lamp or extension "zip" cord is rated in the 12 to 14 amp region.
18 AWG stranded wire is found in most any automotive parts store. Suppliers such as Radio Shack do not carry this size wire. Many of the failures came from people "one stop shopping" using smaller wire or solid wire that R'S. carried rather than purchase the larger "automotive" stranded wire.

Insulation and Strain Relief

After recommended crimping, you can add both extra insulation (to prevent fraying) and strain relieve at the same time with the addition of heat shrink tubing. Insulate both conductors with a 2 inch length of heat shrink per conductor. Make sure that the crimp part of the pin is covered with tubing. Shrink the tubing. After this is done, pass both insulated conductors through a slightly larger diameter of shrink tubing. A length of about 1.5 inches seems to work well, Place both of the conductors in the shell and seat the pins, slide the larger heat shrink down to connector shell, then shrink. Among other things this gives the connector a professional "finished" look.
The strain relief part from Molex works very well but is hard to come by in small quantity and is expensive. This compromise has worked well. Adding this insulation modification to an already assembled connector is possible with the "extraction" tool available from AMP, Molex and Radio Shack.

Using the larger "Heavy Duty" 20 amp connector from Radio Shack

Again for those who argue that the 8 amp connector is to small, Radio Shack also carries a larger, heavy duty connector similar to a Molex. (Female connector and Pins 274-154, Male connector and Pins 274-151). Besides the larger pins and current capacity, this connector has a very nice "positive locking" latch molded in the nylon. These larger connectors

seem to be in favor with the amateurs who like Mobile HF work.
Additionally, these connectors can accommodate a much larger wire size. 10 to 14 AWG. Again Radio Shack was very conservative with their ratings on this connector.
For those amateurs who use these connectors as their "standard" in the Dallas area, they also carry an adapter to convert this connector to the ARRL/Dallas RACES standard.

Existing Original Equipment Manafactures (OEM) Connectors

Many amateurs do not like to modify there equipment from the manufactures connector. They prefer to leave there equipment "original" as this aids in resell value. Again all that is required for the standardization scheme, is to have an adapter available to convert to the standard.
The OEM connectors do not have to be replaced, simply adapted to the standard.

I work contests _only_ to bag new country/band/mode combinations,
and stick to the game plan during the contests (ie. no rag chewing).
I QSL virtually all the contacts I make during the contest. I think
it's fair to expect cards in return, as long as you include return
postage and SAE. This applies to _all_ QSL's. We're entitled to
the card, but not necessarily the postage or the addressing.

As I have stated before, I am completely in favor of a stronger theory exam. Especially one which would include questions relevant to amateur radio in the 90's...packet, digipeters, satellite communications, proper repeater operation, etc. Wouldn't that make more sense than testing to see how many electronic sound pulses per minute that one can copy?

Well goody for you.

Let me put it this way. Many people are never going to use CW. The work required to learn CW is pointless. Do you enjoy pointless? I think you should have to learn braille in order to get you license. It makes just as much sense.

I don't know why I'm jumping in here, the old "I had to do it so you should have to do it also" is a rather shortsighted attitude. It goes to show that improvement of ham operators is the least of your worries, you just worried someone might get the priviledges with less work. On the other hand... I get the fealing that alot of CW proponents are afraid that they wouldn't be able to deal with real competance tests. If CW went away you might actually have to demonstrate theory competance with a non-gimmee test.

So, is it better to keep numbers down via ancient skills that are unnecessary, or is it better to force people to develop modern, relevant skills?

As for those that want the CW frequencies, that's fine, those people can learn morse since it will be relevant to them. I would be all for maintaining those as pure CW.

Roger

1833. This Week in Amateur Radio #149 (for air through 2/9/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-02 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <RjHrBoX.sanderman@delphi.com>
Source record: 231194

Here is a summary of news items covered on edition #149 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 9-Feb:
-
1. FCC Affirms Its Committment to 219 MHz Amateur Allocation
2. Commission Delays Spectrum Policy and Management Hearings
3. Kansas City Amateurs Assist Police in Catching Computer Theives
4. ARRL Says FCC Will Not Accept Electronic Filing of Renewals
5. Ham Gear Used In Kidnapping Case Seen on "60 Minutes"
6. Walter Cronkite, KB2GSD, Recovers from Knee Surgery in NYC
7. Several Notable Hams Listed as Silent Keys
8. "The RAIN Dial-up" from Chicago
9. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
10. March Shuttle Mission, STS-76, to Carry SAREX
11. STS-75 Schedule for Launch Later This Month, Keps on WWW
12. MCI Wins the Latest FCC Auction of a DBS Satellite Slot
13. Weekly Propagation Forecast with George Bowen, N2LQS
14. "Amateur Radio Newsline" - Edition #964 from Los Angeles
15. Upcoming Special Event Stations
16 Congress Passes Telecommunications Revision, Details Next Week
-
Funding for the program's transmission and production expenses was
provided this week by a grant from Gene Wicklund, WA0ZOK, of Horace
North Dakota, who carries "This Week in Amateur Radio" on the WA0ZOK
repeater on 443.75 MHz, serving Fargo, North Dakota, Morehead,
Minnesota, and the Red River Valley.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "Tech Talk Network" each Saturday at 8:00 PM (EST)
on the Telesat Canada Anik E2 commercial communications satellite,
transponder 18 (9B vertical), 5.8 MHz wideband analog audio
subcarrier (4.06 GHz), located at 107.3 degrees west longitude in
equatorial geosynchronous orbit. It's carried on VHF/UHF repeaters
throughout North America and on 160 meters at 1860 kHz. Contact
your local amateur radio club or repeater operator if "This Week in
Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Satellite space and uplink services are provided by Skyvision,
Incorporated as a service to the amateur radio community. Further
information is available from George Bowen, N2LQS, at 518/283-3665

(e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

1836. WTB/Trade: K102D, Need Schematics, Pods for Logic Analyzer: Biomation Gould

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-02 00:00:00 UTC
From: "Walt W.", dfheli@gramercy.ios.com
Message-ID: <4esovp$qlf@news.ios.com>
Source record: 231197

Hello,

I need schematics and Pods (probes) for a Biomation/Gould
K102D Logic Analyzer.

If you can not 'bear to part-with' your schematics, then
could you photocopy them and send them to me UPS/COD for
the cost of the service and shipping?

How about some pods? I need (4) pods/probes. I would
like to pay $0, but if reasonable I am sure we can
work out something?!

I have some fairly interesting stuff perhaps a trade?

Many thanks.

>It's there many mornings around 1200 utc and just sends
>...- ...- (V V V ...)> Does anyone know what this is? Where is it located?
> 73 Gary WQ1F> (In the Green Mt. State of Vt.)

This V beacon intruder has been there for a number of years. I do not know for sure, but I think that it may be located somewhere in south central Russia. When amateur signals from that area are good, the beacon is always particularly strong here near Melbourne. For a little while, a week or so back, this beacon was running FSK, such that the mark was V, and space a B.

See also 7.039 MHz where you may hear F, S, and C beacons.

I too would dearly like to know what these beacons are for, and where they are located.

73, Drew, VK3XU.

> > acceptance!!

Drew is right that a modified CB transmitter or a tranceiver, and which is used afterwards *only* under the amateur service, does not require type acceptance. But his more sweeping statement that implied all amateur equipment was free from acceptance testing is not correct.

All External RF Power Amplifiers or Amplifier Kits made, modified or imported for use in the amateur service on any frequency below 144MHz require FCC Type Acceptance. The one exception is that any licensed amateur may make or modify one single amplifier per year without type acceptance. See 97.315.

Date: Wed, 31 Jan 1996 22:58:04 -0800
From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: <<FREE WWW Ham Radio Classified Page with Search Engine>>

The Raymond Sarrio Company9s Ham Radio WWW site is proud to announce a
FREE Ham Radio classified advertising page at
http://www.csz.com/sarrio.html. This new classified page will allow Hams
to find equipement with the help of a search engine--no need to scroll
through 1009s of listing before you find that special piece of gear. Plus,
when you find the gear you'er interested in, you are also provided with
easy point-and-click e-mail access, directly to the Ham that listed the
item.

For those Hams with gear to sell, take note! there is NO charge to list
your equipment within Ham Classifieds, and there will be no posting time
delays. Your posting(s) will go on-line in our classified search engine
in about 1 hour. All you need do is fill out a simple forms page, and upon its

(point-and-click) submission your 3For Sale2 classified is immediately
on-line.

I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.

Give it a try, and let me know how you like it (we are still beta testing)
739s Ray

Date: Thu, 01 Feb 96 19:41:06 GMT
From: David Hough <dave@llondel.demon.co.uk>
Subject: GB2RS News 4th February 1996

Good morning. It's Sunday the 4th of February and here is the GB2RS news
broadcast, prepared by the RSGB and intended for all radio amateurs and
short-wave listeners.

The RSGB responded quickly to reports on radio and TV, and in
newspapers, about the Duke of Edinburgh's phone conversation being taped
by "a radio amateur" or "radio ham". A press release was sent to all
national newspapers and to radio and TV stations stating that "there is
no evidence whatsoever" that the telephone conversation was intercepted
and recorded by a licensed radio amateur. The individual named in the
newspapers as taping the Duke of Edinburgh's phone conversation is not a
member of the RSGB and it is firmly believed that he does not hold an
amateur radio licence. The RSGB press release also pointed out that
equipment capable of receiving analogue mobile phones is widely
available and may be purchased quite legally by anyone.

The RSGB General Manager, Peter Kirby, G0TWW, was also interviewed by
Independent Radio News, Associated Press, Sky TV News, and Channel 1
Cable TV on Tuesday and Wednesday over the matter.

A new 50MHz GB2RS news broadcast serving Central Scotland is starting
today, the 4th of February, at 11.30 am. Initially, it will be for an
experimental period of three months but will be continued if it proves
to be a success. The transmission will be from the station of Tom
Menzies, GM1GEQ, and will be on 51.530 MHz with vertical polarisation.
Reports will be welcome, and should be sent to GM1GEQ via the RSGB QSL
bureau.

The Barnsley and District Amateur Radio Club is co-ordinating a coach
trip to Friedrichshafen in June on behalf of the RSGB. The
Friedrichshafen 'Hamfest' is Europe's largest amateur radio exhibition.
The coach will depart on Wednesday the 26th of June and return on
Tuesday the 2nd of July and pick-ups can be arranged at pre-determined
locations en route. Places are allocated on a first come, first served

basis so contact the organiser, Ernie Bailey, G4LUE, without delay. He is available on 01226 716339, or 0836 748958, between 6.00 and 8.00pm.

There is a new QSL Bureau Sub-Manager for the GM0AAA to LZZ series of callsigns. He is Fred Roe, GM0ALS, and his address is 8 South Gyle Gardens, Edinburgh. The postcode is EH12 7RZ. The address may also be found in the RSGB Call Book under GM0ALS.

The Radio Amateur Invalid and Blind Club Northern Ireland Area is holding a flag day collection in the Ballymena town centre shopping complex on Friday the 9th of February between about 10.00 am and 9.00 pm. Anyone who can help for a few hours should contact David Caldwell, GI0HOW, on 01232 471370, or send a fax to him on 01232 471980, to arrange times and identification permits.

On Saturday the 10th of February, the Lincoln Short Wave Club is celebrating its 75th anniversary. The club was formed as the Lincoln Wireless and Scientific Society in 1921. There will be an exhibition and special event station at the Lawn Complex, Lincoln, from 12 noon until 5.00 pm, with a celebratory dinner in the evening. The day's events will be opened jointly by the Mayor of Lincoln, Councillor Geoff Ellis, and RSGB President Peter Sheppard, G4EJP. For further details of this, or the club's other activities, please contact John Middleton, G8VGF, on 01522 525760.

The annual Guides 'Thinking Day on the Air' takes place over the weekend of the 24th and 25th of February. A pack is available from RSGB HQ consisting of a list of participating special event stations and details of the countries which permit third party Greetings Messages during this event. Groups using a GX or similar prefix instead of a GB call are asked to contact Mrs Eva Telenius-Lowe at RSGB Headquarters by this Friday, the 9th of February, in order to be included on the list of participating stations. If you would like the pack, please send an A4-size self-addressed envelope, with 38p in stamps, to Eva at RSGB HQ.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

>the radio . . .
> Jeff Shelton/KS4TL

Fact is the company who made the relay for ICOM in Japan went out of business several years ago. Before that happened ICOM tried to forcast the requirements for the relay for the next 5 years. Thye used them up in the

9 to 10 years that have passed since that time.

>it!

That's a rather incredible amount of lift for a weather balloon (which
of course *isn't* a hot air balloon anyway). I don't know where you're
getting your figures, but 350 pounds for 500 feet of #14 is absurd (it's
also 75% of the yield limit of the wire, so it wouldn't take much catenary
loading from the wind to exceed the limit). 500 feet of bare 14 gauge copper
wire only weighs about 6.25 pounds. That's too much load for a 10 foot Wx
balloon, of course, but you'd use something a bit thinner, say #22, which
would only weigh a pound for 500 feet. It'd break in a 24 MPH gust, though.

And I guarantee that if there is any wind at all, that balloon is going
to lay out along the ground instead of standing overhead. With a 10 foot
balloon, #22 wire, and a 15 MPH wind, that corresponds to a slant angle
of about 84 degrees off zenith. With very light breezes, the balloon may
stand as high as 45 degrees off zenith, but it would have to be dead calm
for it to approach zenith more closely than that. A lifting body, however,
like the advertising blimps, can be set to rise into the wind, and they can
approach zenith fairly closely, to better than 30 degrees off zenith. The
angle from zenith corresponds to the sum of the tangents of the vector
forces at work.

>For some reason everyone is thinking Wagner is stupid. We have talked in
>mail about this in the past. I think that he has a good idea, and with a
>lot of planing his club will do just fine.

I don't think he's stupid. I just think he doesn't have experience
with tethered balloons of this nature, and that he hasn't done the
math to see what angle the forces involved will yield. There are
three primary force vectors, lift, gravity, and wind loading. Those
are tied together by the catenary of the wire to yield the angle of
repose for the system. All the data you need is in the CRC Handbook.

If you've got a *lot* of excess lift, you can pull the wire more nearly
vertical for a given wind speed, but a lot of lift corresponds to a
large balloon, and that has a correspondingly large frontal area to
present to the wind, so the vectors still lead to a large angle off zenith.
The advantage of the lifting bodies is that they can supply lift *without*
a corresponding increase in frontal area, so they can reduce the angle
from zenith a lot more. Unfortunately, that puts more stress on the tether
too, so you have to go to a larger gauge, and that adds weight. It can be
a vicious circle.

If he lays out 2,000 to 10,000 feet of wire, he's creating an incredible
hazard if it gets away from him. The odds of it all coming down where
it'll miss a power line are pretty slim. Though for a Wx balloon to lift
that much he's going to have to use #30 or smaller, and it'll just vaporize
when it tangles with the power lines (automatic fuse). (And it'll break
under it's own weight and wind loading before it reaches full height anyway.)

Now there is another way. If he uses a large (manned) hot air balloon, he
can three point tether it with heavy steel cable and just hang the antenna
wire vertically below it. That may be what you're thinking of. He's not
going to reach 2,000 to 10,000 feet that way, however. Something on the
order of 300 feet might be possible before stresses on the central
tether connection to the balloon get out of hand during wind gusts.

(Of course he could use a *huge* tethered blimp, such as TV Marti uses,
and reach 10,000 feet, but I doubt he can afford that, Congress is
debating whether the US can afford that.)

Yes ... but not without problems.

I posted a WTB in alt.ham-radio.am last week, and it duly appeared.
Since then there've been no other postings in that ng.

I sent the WTB posting again last night and it got bounced back by
my ISP as 'No valid newsgroups specified'

Well goody for you.

Let me put it this way. Many people are never going to use CW. The work
required to learn CW is pointless. Do you enjoy pointless? I think you
should have to learn braille in order to get you license. It makes just
as much sense.

I don't know why I'm jumping in here, the old "I had to do it so you
should have to do it also" is a rather shortsighted attitude. It goes
to show that improvement of ham operators is the least of your worries,
you just worried someone might get the priviledges with less work. On
the other hand... I get the fealing that alot of CW proponents are afraid
that they wouldn't be able to deal with real competance tests. If CW went
away you might actually have to demonstrate theory competance with a
non-gimmee test.

So, is it better to keep numbers down via ancient skills that are unnecessary,
or is it better to force people to develop modern, relevant skills?

As for those that want the CW frequencies, that's fine, those people can learn morse since it will be relevant to them. I would be all for maintaining those as pure CW.

William,

The NIR-10 4.0 upgrade should allow you to duplicate ANY 3.0 setting,
since all the original code is still there - just with added features.
I made sure of that when I wrote the upgrade code. If you need a set
of the old v3.0 EPROMs to compare with, give me a call at JPS.

Why not have a techology filter? In fact, why have a filter at all? The
answer is alluded to by your next paragraph.

>>Face it, nobody really builds their own radios any more. Look in
>>the ham radio magazines and what do you see? Answer: mega-
>>dollar ham radios. This is the only difference between a ham radio
>>operator and a C.B. radio operator.

>to.

It is that *everybody* used to behave with more decorum, until decorum and
politeness gave way to PCism and everybody's right to say whatever they
want, whenver they want, dammit!

This is a general societal problem (and ham radio is more or less a
microcosm of society). The problem isn't solved by simply having a lid
filter. Besides -- no filter is perfect. Remember Murphy's Third Law:
Foolproof systems give rise to more clever fools.

>>If this attitude were pervasive, we would have penmanship tests to
>>use a state park, pie eating contests to drive on the public
>>highways and height requirements to run for elected office. The
>>code test is simply no longer relevant to operating a ham radio.
>your analogies are shaky at best.

Maybe, maybe not. It remains to be seen (just ask over in
rec.radio.amateur.policy someday) exactly what benefit, if any, continued
Morse training has for the Amateur Radio Service.

>The influx of poor operators since the advent of the no-code license is
>staggering. I have never heard so much foul language and obnoxious

>license classes. Anyone who truly wants a ham license will find that
>learning the code at the required snail's pace is no barrier at all...or
>am I overestimating people's abilities?

No, but if you're simply in a mood to create artificial barriers, make them
good ones. How about jumping out of an empty oil barrel? Or ditch-digging
(Gary KE4ZV's favorite)? Let's really make it a good one: each license
applicant must successfully lobby the FCC to turn one of our UHF+
allocations into "amateur exclusive".

As for the lack of good operators, there has also been a lack of good
elmering, especially by the W#xxx and K#xxx calls from days of old who look
down their noses at the new licensees. Some attitude adjustment is called
for all around.

QSL has two official usages. "QSL?" means "Do you acknowledge receipt
of my traffic?" "QSL" means "I acknowledge receipt of your traffic."

They are procedural signals intended to be used for *over the air*
message handling, nothing about postal cards or snail mail is implied.

Subject: Using DSP to emulate a TNC

Hey guys/gals/other:

I am trying to use digital signal processing to emulate a TNC for packet
communication. Right now, I'm at the very start of my research, so I'm
looking for resource information.

1) What are the best WWW locations for DSP information?
(My crawler shows quite a few, but I don't know which ones are useful)

2) Where can I find documentation detailing how a TNC operates?
I know vaguely what is in there, but I really need the details.

Feel free to respond via this thread or by direct email.
Thanks,
Vince

Six is becoming popular, but due to the current state of the sunspot cycle you won't find much beyond local activity except during the infrequent band openings. *Then* it can get real busy. But if you're going to restrict yourself to one VHF+ band, I'd think seriously about a 70cm or 2m SSB rig before I'd set up for 6m. That's because there are many more operators, and more enhanced propagation modes to explore, on those bands. Your "dx" won't be global in scope (unless you go for EME), but it will be more frequent and more hectic as you chase tropo, aurora, and satellites.

However, if you're patient, a 3 element beam and a 100 watts on 6 meters can give you globe spanning results when the band does open. Meteor scatter also works better here than on 2 meters. In 4 or 5 years when the sunspot cycle comes around, 6 will be open

to somewhere in the world almost daily.

Well 6m is good in the summer with sporadic 'e' but e's each day
become a bit boring especially after your log fills up with italians
and balkan area people. When the DX is around you might need a bit of
power to break the pile up.....and when there are no 'e's about it's
as dead as a dodo. Until conditions improve I'd leave it as your main
band.

For my money I'd go for 2m, much more activity especially in the
South, up here in the sticks it's quiet. But you could get a rig such
as an IC251e (around 300UKP) and add an amplifier to take it beyond
the 10 watts it normally gives out. For example, with 70 watts and a
9ele yagi I managed to work down to Reading from Edinburgh last night.
Ok it was a prearranged sked but that appears to be the only way to
get a long distance qso these days.......

Cheers,

Gavin,

Date: (null)
From: (null)

A German group leaves home today for an operation from Christmas Island
as VK9XY until Tuesday the 13th of February. They then go on to the
Cocos-Keeling Islands as plan activity as VK9CR between the 14th and
23rd of February. They will operate CW and SSB on 160 to 6 metres, plus
RTTY and satellites.

And from Barbados, VE4GV plans to be active as 8P9EN from Thursday the
8th until the 15th of February on all bands 80 to 10 metres, mostly CW.

Next the Rally News:

The Lancastrian Rally is taking place at the University of Lancaster
today, the 4th of February. The doors open at 11.00, or 10.30am for
disabled visitors.

Also today, the South Essex Amateur Radio Society Radio Rally is taking place at The Paddocks, Long Road, Canvey Island. The event includes RSGB Morse Tests on demand - candidates are reminded that they will need to take the test fee and two passport-size photographs along. Doors open at 10.30 am.

Next Sunday, the 11th of February, the Northern Cross Rally takes place at the Thornes Park Athletics Stadium on the A642 Horbury Road in Wakefield, which is a new venue for this rally. The event features the usual dealers, a bookstall and bring-and-buy stand, an RSGB Propagation Studies Committee stand and Morse Tests on demand. Please bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at the rally. Talk-in will be provided on 2 metres channel S22 and 70 centimetres channel SU22, and further details can be obtained from G0FLX on 0113 238 3622.

Also on Sunday the 11th, the Cambridge and District Amateur Radio Club Rally takes place at the Ambulance Station at Addenbrookes Hospital. The event features trade stands, a bring and buy stall and car boot sale. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For more details contact John, G0GKP, on 01954 200072.

And now a date for your diary:

The RSGB National VHF Convention takes place at the usual venue - Sandown Park in Surrey - two weeks from today, on Sunday the 18th of February. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show and special interest groups. Full details are in the February edition of Radio Communication.

A new award in memory of Cyril James, G3VVB, and aimed at the home constructor of microwave equipment, will be presented for the first time at the RSGB VHF Convention. If you have an item of home-made microwave equipment and you are proud of the way you've constructed it, then why not bring it along to the Convention and enter it in the competition? The equipment can be constructed from any design, or from a kit - what the judges will be looking for particularly is quality of construction and finish. If you cannot attend the Convention in person, you may send detailed photographs and a written description to Steve Davies, G4KNZ, whose address is correct in the RSGB Call Book.

Now for the HF contest news:

The final session of the RSGB LF Cumulative is on 80 metres today, Sunday the 4th of February, between 16 and 1800 UTC. The rules were published in last September's RadCom, but please note that the dates were given incorrectly in September. The correct dates are shown in the February RadCom.

Next weekend, the RSGB 1.8MHz CW Contest takes place from 2100 UTC on Saturday the 10th until 0100 UTC on Sunday the 11th of February. The rules are in the September RadCom.

And the Dutch PACC Contest takes place on CW and SSB for 24 hours from 1200 UTC on Saturday the 10th. Brief rules are on page 22 of the February RadCom.

Next some VHF contest news:

The 432 MHz RSGB Affiliated Societies and Fixed Station Contest is taking place today, the 4th of February, between 09 and 1500 UTC.

And next Sunday, the 11th of February, the third session out of five in the RSGB 70 MHz Cumulative Contests will take place between 10 and 1200UTC. The rules for all these contests can be found in last September's RadCom.

And now the solar factual data:

The period from the 22nd to the 28th of January saw solar activity at very low levels and the geomagnetic field at quiet levels. Only one small sunspot group remained on the solar disc, and the mean was 7. Solar flux levels increased very slightly from 72 units on the 22nd to 74 units on the 25th. They remained at that level until the 28th and the average was 73 units. No solar flares were reported. Electron fluence declined slightly but remained at a moderate level. X-Ray flux remained at its minimum level of A1.0 every day. The 90-day solar flux average on the 28th was 74 units, the same as last week.

Geomagnetic activity was "quiet", with the levels down to only Ap 3 units on the 25th. The average was Ap 5 units. The aa indices, as supplied by the British Geological Survey for the period from the 16th to the 22nd of January, increased from "unsettled" on the 16th with 15 nanoTeslas recorded, to "active" levels which lasted through to the 20th, when conditions returned to "unsettled". The most disturbed day was the 17th, with 26 nanoTeslas. The average for the period was 20 nanoTeslas, which is just K3.

I'll repeat the figures: spots - 7, flux - 73, Ap index - 5, X-Ray flux - A1.0.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 19th to the 25 of January, improved every day from 5.1MHz on the 19th, to 6.7MHz by the 25th. The average was 6.1MHz. The darkness hour lows decreased slightly from 2.2MHz on the 19th to 1.9MHz by the 23rd, but then increased to end the period at 2.5MHz. The average was 2.2MHz. The daytime highs took place between 0900 and 1400 hours. The darkness hour lows took place between 0400 and 0600 hours every day. Two short periods of sporadic E took place on the 22nd and the 24th.

I'll repeat the figures: highs - 6.1MHz, lows - 2.2MHz.

And lastly the solar forecast:

This week the quiet side of the sun is expected to rotate into view and later in the week the solar disc could become spotless. Solar flux levels are expected to decline to the high 60s. Geomagnetic activity is expected to be very quiet, but later in the week activity could increase to "active" conditions. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north, but levels could decline towards next weekend. The darkness hour lows are expected to be about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Victor and G7 Whisky Alfa series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Quebec series.

1843. Call Letters Now-a-Days.

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-03 00:00:00 UTC
From: motuiti@aol.com
Message-ID: <4f06vn$ma2@newsbf02.news.aol.com>
Source record: 231091

Call Letters Now-a-Days.

Just trying to get a handle on Call letters; I remember when it was only 'W2" etc. As they ran out of single digits, there came "WA2, WB2" and WN2 for novice grade etc. Now-a days, I don't know what is going on.

Some questions:
1) Are call letters still being issued by numerical region "2" being NY etc?
2) Does the FCC fill in with old call letters (W2, WA2) as they expire?
3) Can you tell the license grade by the letters?
4) What is the recent chronology of call signs since the WB2 issue?

If you could send me, or direct me to the answers I'd greatly appreciate it.

1844. List Server ACC Repeater Products

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-03 00:00:00 UTC
From: rrc2@engrng.pitt.edu
Message-ID: <rrc2.2.000EDCA1@engrng.pitt.edu>
Source record: 231092

WELCOME:

ACC stands (stood!) for "Advanced Computer Controls". I think they started in the early '80s. The products they made included the ITC-32, RC-85, RC-850, and RC-96 repeater controllers; Shackmaster 100 (a vhf/uhf/hf remote base controller); Digital Voice Recorder accessory for the "RC" series of repeater controllers; FC-900 Remote Base Interface for ICOM band units; and FC-1 Remote Base Interface for BCD controlled radios. Also, they made some miscellaneous controller accessories such as an audio delay module and a multiple tone panel.
(Jim Gerke, KC5OA)

ACC stands for Advanced Computer Controls....started in 1982 or so by Ed Ingber WA6AXX...did the original "Talking Repeater Controller" in 73 Magazine during that time....

Made the following amateur products:

ITC 32 single board controller (Intelligent Touch-Tone Control board) for rptrs, remote bases, etc
RC-850 repeater controller - the original product from the
RC-85 a scaled down baby brother of the 850
RC-96 a revised version of the 85
SM100 (Shackmaster) a home station controller..allowed phone line/RF control of HF station and VHF/UHF rigs and BSR control of home equipment
DVR - a Digital Voice Recorder either stand alone or could integrate with the RC-xxx controllers above...1 to 3 channels operating independently or together.....(could be shared by three different rptrs at one site)

plus other minor products like Patchmaster 200 (a short lived commercial interconnect), Nspector software for the RC850 (using the computer interface--Version 3.5 and higher)

At one time had over 80% of the repeater controller market in the amateur service and a good amount in commercial service as well...Long time owner of the RC850 ending with V3.8 (the last release before the 850 was retired)....V 5.2 was the last software for the 85/96 series
V 1.7 was last release for the SM100.

Rights to the ITC 32 were sold to Mike WB8CXO in the late 80s.......Hall Electronics (who sells the remote base interface) still offer it with a special software package to integrate to the Voter they sell.....(Chris WB5ITT)

Rights are now sold to Link Communications

See Weak Signals with your PC & Soundcard

FFTDSP is a PC program which uses the soundcard
and audio from your radio to detect weak signals

The original FFTDSP38 program displays a
screen (spectrograph) which shows weak
signals as color traces against a dark background.
A continuous 4096 Point FFT (fast Fourier transform)
is used to provide 640, 2Hz wide filters.

FFTDSP41 - Beta Demo Version now available

Key Additional Features of the upgraded FFTDSP are:

- Record and Playback WAV files for post spectral analysis
- Automatic Color Gradient for optimum visibility
- Integration mode for signal detection below the noise
- Mouse point and click for selective recording
- On screen Moon position and TOD tracking
- True S/N (in 100 Hz Ref) bar graph
- Selective area and mode for S/N display
- Display Smoothing Filters
- Zoom In/Out for wider frequency coverage
- Improved Graphics Interface and Setup Screens
- Find Call feature from partial information

Available Download Sites for Beta Demo:

SB PROP @ ARL $ARLP005
ARLP005 Propagation de KT7H

ZCZC AP26
QST de W1AW
Propagation Forecast Bulletin 5 ARLP005
From Tad Cook, KT7H
Seattle, WA February 3, 1996
To all radio amateurs

SB PROP ARL ARLP005
ARLP005 Propagation de KT7H

This bulletin was delayed by one day due to a delay in getting solar data.

Solar activity is still very low. We are very close to the solar minimum. The latest projections show the 10.7 cm solar flux reaching minimum around a year from now, during January and February 1997. But similar projections show the sunspot number reaching minimum during April through June of this year, and a big increase starting late in 1997. The sunspot number is derived by counting visible dark spots on the Sun and factoring in their area. Solar flux is derived by measuring 10.7 cm radiation from the Sun, and this seems to correlate with density of ionization in the ionosphere.

The most disturbed day over the past week was January 29, when the A index reached 18, and the K index was as high as five. Otherwise geomagnetic conditions were quiet over this period. Solar flux should head down toward 70 by a week from now and then back above the mid-seventies late in the month.

Chuck Sherman writes that he found a good source of historical solar data on the internet via ftp at ftp://ftp.ngdc.noaa.gov/STP/.

Some versions of last week's bulletin ARLP004 had a wrong email address for the author of this bulletin. The correct address is tad@ssc.com.

Sunspot Numbers for January 25 through 31 were 11, 11, 11, 11, 12, 26 and 14, with a mean of 13.7. 10.7 cm flux was 73.9, 73.8, 73.8, 73.6, 74, 74.7 and 76.7, with a mean of 74.4.

Funny, some of us really like having more than just a few simplex frequencies in the area. 146.43 is used for simplex by a bunch of folks west of Boston. The 2 meter band has uses other than voice repeaters, even if the coordination councils don't pay too much attention to them.

There should be no problem getting a 2 meter pair in at least some parts of Massachusetts. I suspect there's no problem if you want to add a repeater in the Berkshires, for example.

Yes, the Boston area is pretty well covered with repeaters. Time to use what exists. Last I heard, 70cm was NOT full, though.

I am looking for an option to the HP8505A network analyser. It is the phase lock option 005.

I need the phase lock board (A2A101 HP part 08505-60213) and the mixer (A2A102 HP 0955-0141). The cables would be nice but not essential.

I realise the chances that anyone knows what the hell I'm talking about are low, and that anyone has these parts that are not already in a working analyzer are even lower, but it doesn't hurt to ask!

If you have these parts to sell please contact me. (work phone 410/672-3900)

Michael

Steve,

Funny you should mention the FM-27B and the HR-2 in the same sentence. The running joke of that era was that if you had a Clegg FM-27B and a Regency HR-2 with a 146.940 receive crystal, you could indeed work all of 146 - 148 MHz at the same time! The Clegg was capable of transmitting over that entire range simultaneously and the Regency was so W-I-D-E that it could receive everything within 1 MHz of the crystal (Center) frequency!

"The way Clegg talks and the way Regency hears, it's a perfect match!"
Yenta the Matchmaker....

Motu Iti asked:
>1) Are call letters still being issued by numerical
>region "2" being NY etc?
Answer: Yes.
>2) Does the FCC fill in with old call letters
>(W2, WA2) as they expire?
Answer: No
>3) Can you tell the license grade by the letters?
Answer: Not really. There is a scheme at the time of first
license,which (for the mainland) goes like this:
--Novice: 2x3 calls assigned, such as KB2XYZ
--Tech, Tech+, and General: 1x3 calls assigned, such
as N2XYZ
--Advanced: 2x2 calls (except none start with "A")
assigned, such as KB2XY.
--Extra: 1x2 or 2x1 calls assigned, such as N2XY or
NX2Y. Also 2x2 calls starting with "A" such as AB2XY.
This scheme gets diluted because you can keep your call
when you upgrade. Thus KB2XYZ who got that call as a Novice
can keep it all the way to Extra. Also, some blocks are "used
up" and calls from lower groups are being assigned. For
example in most areas the 1x3 calls are all gone so new
Techs, Tech+s, and Generals are being assigned 2x3 calls.

>It says that there are 237,869 Techs and 40,559 Tech plus
>(34.39 and 5.86 percent respectively of the total # of
>licensees).

Those numbers are either wrong, or a LOT of Tech+ folks
upgraded. The most recent official FCC numbers show
116,599 Techs and 139,910 Tech+. I suspect Callbook is
only counting TechPlus since it was created as a separate
class, instead of counting all the "Tech with Morse" which
existed at that point.

It's Portishead Radio. It's located near the Bristol Channel,
South-West England (and has every right to be on that frequency
I'm afraid).

Portishead use GKA, GKB, GKC...

Obviously I need to pay more attention to 80m as I'm missing some
good propagation. At what times of the day (your time, or GMT?)
can you hear GKE?

Thanks for the message - the price on the advert was 150 pounds
sterling, which equates to about 225 dollars. However, I'd also
be interested in a straight swap for a 70cm handie (though it
needs to cover the UK bit of the band, 432 to 440 MHz with the
ability to do +1.6 MHz repeater shift).

Your '4' callsign suggests that one route to get it to you would be via my brother (who lives just off the I-75 and I-285 at Marrietta, Ga). I *may* be visiting him in April.

I'm located approx 5 miles from Heathrow Airport or 40 miles from Gatwick Airport.

>it!

That's a rather incredible amount of lift for a weather balloon (which
of course *isn't* a hot air balloon anyway). I don't know where you're
getting your figures, but 350 pounds for 500 feet of #14 is absurd (it's
also 75% of the yield limit of the wire, so it wouldn't take much catenary
loading from the wind to exceed the limit). 500 feet of bare 14 gauge copper
wire only weighs about 6.25 pounds. That's too much load for a 10 foot Wx
balloon, of course, but you'd use something a bit thinner, say #22, which
would only weigh a pound for 500 feet. It'd break in a 24 MPH gust, though.

And I guarantee that if there is any wind at all, that balloon is going
to lay out along the ground instead of standing overhead. With a 10 foot
balloon, #22 wire, and a 15 MPH wind, that corresponds to a slant angle
of about 84 degrees off zenith. With very light breezes, the balloon may
stand as high as 45 degrees off zenith, but it would have to be dead calm
for it to approach zenith more closely than that. A lifting body, however,
like the advertising blimps, can be set to rise into the wind, and they can
approach zenith fairly closely, to better than 30 degrees off zenith. The
angle from zenith corresponds to the sum of the tangents of the vector
forces at work.

>For some reason everyone is thinking Wagner is stupid. We have talked in
>mail about this in the past. I think that he has a good idea, and with a
>lot of planing his club will do just fine.

I don't think he's stupid. I just think he doesn't have experience with tethered balloons of this nature, and that he hasn't done the math to see what angle the forces involved will yield. There are three primary force vectors, lift, gravity, and wind loading. Those are tied together by the catenary of the wire to yield the angle of repose for the system. All the data you need is in the CRC Handbook.

If you've got a *lot* of excess lift, you can pull the wire more nearly vertical for a given wind speed, but a lot of lift corresponds to a *large* balloon, and that has a correspondingly large frontal area to present to the wind, so the vectors still lead to a large angle off zenith. The advantage of the lifting bodies is that they can supply lift *without* a corresponding increase in frontal area, so they can reduce the angle from zenith a lot more. Unfortunately, that puts more stress on the tether too, so you have to go to a larger gauge, and that adds weight. It can be a vicious circle.

If he lays out 2,000 to 10,000 feet of wire, he's creating an incredible hazard if it gets away from him. The odds of it all coming down where it'll miss a power line are pretty slim. Though for a Wx balloon to lift that much he's going to have to use #30 or smaller, and it'll just vaporize when it tangles with the power lines (automatic fuse). (And it'll break under it's own weight and wind loading before it reaches full height anyway.)

Now there is another way. If he uses a large (manned) hot air balloon, he can three point tether it with heavy steel cable and just hang the antenna wire vertically below it. That may be what you're thinking of. He's not going to reach 2,000 to 10,000 feet that way, however. Something on the order of 300 feet might be possible before stresses on the central tether connection to the balloon get out of hand during wind gusts.

(Of course he could use a *huge* tethered blimp, such as TV Marti uses, and reach 10,000 feet, but I doubt he can afford that, Congress is debating whether the US can afford that.)

Yes ... but not without problems.

I posted a WTB in alt.ham-radio.am last week, and it duly appeared.
Since then there've been no other postings in that ng.

I sent the WTB posting again last night and it got bounced back by
my ISP as 'No valid newsgroups specified'

Well goody for you.

Let me put it this way. Many people are never going to use CW. The work
required to learn CW is pointless. Do you enjoy pointless? I think you
should have to learn braille in order to get you license. It makes just
as much sense.

I don't know why I'm jumping in here, the old "I had to do it so you
should have to do it also" is a rather shortsighted attitude. It goes
to show that improvement of ham operators is the least of your worries,
you just worried someone might get the priviledges with less work. On
the other hand... I get the fealing that alot of CW proponents are afraid
that they wouldn't be able to deal with real competance tests. If CW went
away you might actually have to demonstrate theory competance with a
non-gimmee test.

So, is it better to keep numbers down via ancient skills that are unnecessary,
or is it better to force people to develop modern, relevant skills?

As for those that want the CW frequencies, that's fine, those people can
learn morse since it will be relevant to them. I would be all for
maintaining those as pure CW.

William,

The NIR-10 4.0 upgrade should allow you to duplicate ANY 3.0 setting,
since all the original code is still there - just with added features.
I made sure of that when I wrote the upgrade code. If you need a set
of the old v3.0 EPROMs to compare with, give me a call at JPS.

Why not have a techology filter? In fact, why have a filter at all? The answer is alluded to by your next paragraph.

>>Face it, nobody really builds their own radios any more. Look in
>>the ham radio magazines and what do you see? Answer: mega-
>>dollar ham radios. This is the only difference between a ham radio
>>operator and a C.B. radio operator.

>to.

It is that *everybody* used to behave with more decorum, until decorum and politeness gave way to PCism and everybody's right to say whatever they want, whenver they want, dammit!

This is a general societal problem (and ham radio is more or less a microcosm of society). The problem isn't solved by simply having a lid filter. Besides -- no filter is perfect. Remember Murphy's Third Law: Foolproof systems give rise to more clever fools.

>>If this attitude were pervasive, we would have penmanship tests to
>>use a state park, pie eating contests to drive on the public
>>highways and height requirements to run for elected office. The
>>code test is simply no longer relevant to operating a ham radio.
>your analogies are shaky at best.

Maybe, maybe not. It remains to be seen (just ask over in rec.radio.amateur.policy someday) exactly what benefit, if any, continued Morse training has for the Amateur Radio Service.

>The influx of poor operators since the advent of the no-code license is
>staggering. I have never heard so much foul language and obnoxious

>license classes. Anyone who truly wants a ham license will find that
>learning the code at the required snail's pace is no barrier at all...or
>am I overestimating people's abilities?

No, but if you're simply in a mood to create artificial barriers, make them
good ones. How about jumping out of an empty oil barrel? Or ditch-digging
(Gary KE4ZV's favorite)? Let's really make it a good one: each license
applicant must successfully lobby the FCC to turn one of our UHF+
allocations into "amateur exclusive".

As for the lack of good operators, there has also been a lack of good
elmering, especially by the W#xxx and K#xxx calls from days of old who look
down their noses at the new licensees. Some attitude adjustment is called
for all around.

QSL has two official usages. "QSL?" means "Do you acknowledge receipt
of my traffic?" "QSL" means "I acknowledge receipt of your traffic."
They are procedural signals intended to be used for *over the air*

message handling, nothing about postal cards or snail mail is implied.

From: socci@bns101.bng.ge.COM (Vincent Socci ph2828)
Subject: Using DSP to emulate a TNC

Hey guys/gals/other:

I am trying to use digital signal processing to emulate a TNC for packet communication. Right now, I'm at the very start of my research, so I'm looking for resource information.

1) What are the best WWW locations for DSP information?
(My crawler shows quite a few, but I don't know which ones are useful)

2) Where can I find documentation detailing how a TNC operates?
I know vaguely what is in there, but I really need the details.

Feel free to respond via this thread or by direct email.
Thanks,
Vince

From: dringer@access.mountain.net (Dan Ringer)
Subject: What does CQ mean?

I had always thought that CQ was "come quick" but it could be an "old wyfe's tail."

The distress prosign was CQD (the D stood for "danger"?)

When the Titanic went down they transmitted CQD, then tried the (then) recently adopted distress signal SOS - proported to be the
first use of SOS.

No, I don't have the references for the above. Just passing it along.

Six is becoming popular, but due to the current state of the sunspot cycle you won't find much beyond local activity except during the infrequent band openings. *Then* it can get real busy. But if you're going to restrict yourself to one VHF+ band, I'd think seriously about a 70cm or 2m SSB rig before I'd set up for 6m. That's because there are many more operators, and more enhanced propagation modes to explore, on those bands. Your "dx" won't be global in scope (unless you go for EME), but it will be more frequent and more hectic as you chase tropo, aurora, and satellites.

However, if you're patient, a 3 element beam and a 100 watts on 6 meters can give you globe spanning results when the band does open. Meteor scatter also works better here than on 2 meters. In 4 or 5 years when the sunspot cycle comes around, 6 will be open to somewhere in the world almost daily.

>email - ee95ajm@brunel.ac.uk

Well 6m is good in the summer with sporadic 'e' but e's each day
become a bit boring especially after your log fills up with italians
and balkan area people. When the DX is around you might need a bit of
power to break the pile up.....and when there are no 'e's about it's
as dead as a dodo. Until conditions improve I'd leave it as your main
band.

For my money I'd go for 2m, much more activity especially in the
South, up here in the sticks it's quiet. But you could get a rig such
as an IC251e (around 300UKP) and add an amplifier to take it beyond
the 10 watts it normally gives out. For example, with 70 watts and a
9ele yagi I managed to work down to Reading from Edinburgh last night.
Ok it was a prearranged sked but that appears to be the only way to
get a long distance qso these days.......

Cheers,

Gavin,

>side were 4-4 and right up there with
>the beacon. that station could not hear then. I doubt if he could even
>copy his own dowlink signal

Friends,
Please correct me on any bad newsgroup etiquette, I am not sure
when its appropriate to express myself..

As to the alligators on the sats, I have only been working the birds
for a year and I must say overall most of the operators show a great
deal of class.. However one of the first things I discovered is the
great need to have the best recieve as you possibly can. I do the
best I can, but occasionally the station I am working will give me
a 5-7 or so signal report even the my downlink sounds like its in the
mud.. I learned to cut back at that point realizing that I have no
way of knowing how much metal is pointing at the sky on their end.
I agree about the beacon also on 13.. but judgement on 10 should be
used..

I enjoy fo-20 work as well, and that that is where your point really
is driven home.. I have heard cw operators just killing the downlink
to the point that you can hear the chop chop in the rest of the qso's
on the bird.. I experimented with a little cw on both fo-20 and ao-10
and was quite amazed at how little power produced a decent downlink..
5watts produced an echo on ao-10 when it was all I could do to hear
my downlink with 90watts ssb..

>is a few simple mods to do the job.
>

There is a varistor inside the standard network that is omitted in the
425J. It makes a dandy rectifier. Your phone will probably work OK
if you just bypass tip and ring to ground with 0.01 caps. Also put
a 0.01 across the varistor in the earpiece. If that isn't enough,
first cut the earpiece varistor (handset cord is acting as an antenna)
if that doesn't help, try one of the commercial inductive inline
RFI supressors (about $15). You can also make an inductive filter by
winding the wall cord around a ferrite rod or an old TV flyback transformer
core.

1872. Blown Powersupply: Tek 465B, Got Schematics?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-03 00:00:00 UTC
From: "Walt W.", dfheli@gramercy.ios.com
Message-ID: <4eucp2$t0t@news.ios.com>
Source record: 231209

Hello,

I have a Tek 465 Scope Service Manual.

I need a Tek 465-B Scope Service Manual.
Trade or whatever!

Actually what I need is a photocopy of the powersupply
circuit.

All the supplies are sagging. The voltages are;

s/b is
+115 +112
+55 +47 vdc<----- Y
+ 5 +2.5 <------ Yu
+15 0.50 <------ Yuk
- 8 0.0 <------ Yuker@!

The fuse was blown, I stick new fuse in and I get the above
surprise.

I think the one of the full wave rectifiers has a shorted diode,
maybe in the +55 since it is the reference source for the rest.
It is probably saturating the transformer core also, but the
xfrmr is not humin'.

The schematics I have just are not close enough to track it
down. I know, I am fairly lazy, I could take the board out and
Heaven Forbid, make a drawing?! But, in my defense, there
is lots of cables, connectors, transistors that have to be
removed and documented for disassymbly/reassymbly.

Any help with diagrams or suggestions (except for the bridge idea)
would be greatly appreciated.

73's
Thanks,
Walt W.

Hello,

Are you an old Home-brewer?

Many hams that I speak to today, can not tell me what a
resistor does?!

When I was a Ham, in 1964, I made all my gear. I was 14.
It is indeed, convenient to buy the Jap junk. It does have
all the cool bells and whistles, but what ham can fix them?

They are made for production, not for repair.

Enough babbling on my part.

Hmmm, well in rec.radio, maybe that works. But I'm not sure that'll make
a good battle-flag here in a.s.d! Besides, some of us have developed a
bizarre fondness for Burt. (Hey, I read Dilbert, too!) Years ago I used
to have a pet black rat snake I was sorta fond of, too. He smelled funny,
but he was great for getting rid of dead mice...

And aside from some of the personal attack flame-wars, *some* of Burt's
inanities stimulate thought and replies, which isn't always a terrible

thing.

For ROUTINE renewals, you don't use the 610 anymore, Robert. Yes - I
know - it surprised me, too. Mine expires in March. FCC sent me a

simple form many weeks back, which I signed to acknowledge that I
wanted it renewed, and sent it back. They sent the form without being
asked. Nice to have the feds doing something right!

If your address is still good in their files, you probably will get
that form soon. If not you will then REALLY need a 610 to change the
address!

From: Kevin Schmidt <kschmidt@ihnp4.ucsd.edu>
Subject: Requesting contest QSLs [was QSL etiquette]

I have read the "To QSL or not" topics. I personally reply to
all QSLs received. I also find it hard to believe that anyone, who has
time to get on the air, is too busy to write "confirmed by W1ABC", sign
the card they received, and stick it in the supplied SASE. But if

someone wants to toss away all the QSLs and SASEs he receives that's his right. It is amusing to hear a contester suggest that he expects operators to ask, during a contest contact, if he will reply to a QSL request. I can see it now instead of something like this. (BTW, In my imagination, this is in morse, and op1 is sending 35 words per minute and op2 is sending 15 wpm.)

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY
op1: tu cq test de w1abc

I now realize that at least one contester wants:

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY and by the way, I really need Maine to finish my WAS if I send you a card with an sase would you be willing to send me yours k
op1: r no k
op2: ok 73 w2xyz
op1: cq test de w1abc

This may reduce the qso rate somewhat for op1, but now that I know what's expected...

From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: <<FREE WWW Ham Radio Classified Page with Search Engine>>

The Raymond Sarrio Company9s Ham Radio WWW site is proud to announce a
FREE Ham Radio classified advertising page at
http://www.csz.com/sarrio.html. This new classified page will allow Hams
to find equipement with the help of a search engine--no need to scroll
through 1009s of listing before you find that special piece of gear. Plus,
when you find the gear you'er interested in, you are also provided with
easy point-and-click e-mail access, directly to the Ham that listed the
item.

For those Hams with gear to sell, take note! there is NO charge to list
your equipment within Ham Classifieds, and there will be no posting time
delays. Your posting(s) will go on-line in our classified search engine
in about 1 hour. All you need do is fill out a simple forms page, and upon its
(point-and-click) submission your 3For Sale2 classified is immediately
on-line.

I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.

Give it a try, and let me know how you like it (we are still beta testing)
739s Ray

Don't count on any sites carrying those alt groups. Here at UH we're
already max'd out at some 10,000 groups.

I guess throwing up a new repeater that duplicate coverage 10-fold isn't enough to feed one's ego anymore - now one has to resort to creating alt newsgroups... (Watch that blood pressure!)

Subject: GB2RS News 4th February 1996

Good morning. It's Sunday the 4th of February and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The RSGB responded quickly to reports on radio and TV, and in newspapers, about the Duke of Edinburgh's phone conversation being taped by "a radio amateur" or "radio ham". A press release was sent to all national newspapers and to radio and TV stations stating that "there is

no evidence whatsoever" that the telephone conversation was intercepted and recorded by a licensed radio amateur. The individual named in the newspapers as taping the Duke of Edinburgh's phone conversation is not a member of the RSGB and it is firmly believed that he does not hold an amateur radio licence. The RSGB press release also pointed out that equipment capable of receiving analogue mobile phones is widely available and may be purchased quite legally by anyone.

The RSGB General Manager, Peter Kirby, G0TWW, was also interviewed by Independent Radio News, Associated Press, Sky TV News, and Channel 1 Cable TV on Tuesday and Wednesday over the matter.

A new 50MHz GB2RS news broadcast serving Central Scotland is starting today, the 4th of February, at 11.30 am. Initially, it will be for an experimental period of three months but will be continued if it proves to be a success. The transmission will be from the station of Tom Menzies, GM1GEQ, and will be on 51.530 MHz with vertical polarisation. Reports will be welcome, and should be sent to GM1GEQ via the RSGB QSL bureau.

The Barnsley and District Amateur Radio Club is co-ordinating a coach trip to Friedrichshafen in June on behalf of the RSGB. The Friedrichshafen 'Hamfest' is Europe's largest amateur radio exhibition. The coach will depart on Wednesday the 26th of June and return on Tuesday the 2nd of July and pick-ups can be arranged at pre-determined locations en route. Places are allocated on a first come, first served basis so contact the organiser, Ernie Bailey, G4LUE, without delay. He is available on 01226 716339, or 0836 748958, between 6.00 and 8.00pm.

There is a new QSL Bureau Sub-Manager for the GM0AAA to LZZ series of callsigns. He is Fred Roe, GM0ALS, and his address is 8 South Gyle Gardens, Edinburgh. The postcode is EH12 7RZ. The address may also be found in the RSGB Call Book under GM0ALS.

The Radio Amateur Invalid and Blind Club Northern Ireland Area is holding a flag day collection in the Ballymena town centre shopping complex on Friday the 9th of February between about 10.00 am and 9.00 pm. Anyone who can help for a few hours should contact David Caldwell, GI0HOW, on 01232 471370, or send a fax to him on 01232 471980, to arrange times and identification permits.

On Saturday the 10th of February, the Lincoln Short Wave Club is celebrating its 75th anniversary. The club was formed as the Lincoln Wireless and Scientific Society in 1921. There will be an exhibition and special event station at the Lawn Complex, Lincoln, from 12 noon until 5.00 pm, with a celebratory dinner in the evening. The day's events will be opened jointly by the Mayor of Lincoln, Councillor Geoff Ellis, and RSGB President Peter Sheppard, G4EJP. For further details of this, or the club's other activities, please contact John Middleton, G8VGF, on 01522 525760.

The annual Guides 'Thinking Day on the Air' takes place over the weekend of the 24th and 25th of February. A pack is available from RSGB HQ consisting of a list of participating special event stations and details of the countries which permit third party Greetings Messages during this event. Groups using a GX or similar prefix instead of a GB call are asked to contact Mrs Eva Telenius-Lowe at RSGB Headquarters by this Friday, the 9th of February, in order to be included on the list of participating stations. If you would like the pack, please send an A4-size self-addressed envelope, with 38p in stamps, to Eva at RSGB HQ.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

>Same letter also noted that ICOM has discontinued this relay
>as a replacement part. Being mechanical, it is the item
>that most often goes on a 720A. So when it goes, so does
>the radio . . .
> Jeff Shelton/KS4TL

Fact is the company who made the relay for ICOM in Japan went out of business several years ago. Before that happened ICOM tried to forcast the requirements for the relay for the next 5 years. Thye used them up in the 9 to 10 years that have passed since that time.

>it!

That's a rather incredible amount of lift for a weather balloon (which
of course *isn't* a hot air balloon anyway). I don't know where you're
getting your figures, but 350 pounds for 500 feet of #14 is absurd (it's
also 75% of the yield limit of the wire, so it wouldn't take much catenary
loading from the wind to exceed the limit). 500 feet of bare 14 gauge copper
wire only weighs about 6.25 pounds. That's too much load for a 10 foot Wx
balloon, of course, but you'd use something a bit thinner, say #22, which
would only weigh a pound for 500 feet. It'd break in a 24 MPH gust, though.

And I guarantee that if there is any wind at all, that balloon is going
to lay out along the ground instead of standing overhead. With a 10 foot
balloon, #22 wire, and a 15 MPH wind, that corresponds to a slant angle
of about 84 degrees off zenith. With very light breezes, the balloon may
stand as high as 45 degrees off zenith, but it would have to be dead calm
for it to approach zenith more closely than that. A lifting body, however,
like the advertising blimps, can be set to rise into the wind, and they can
approach zenith fairly closely, to better than 30 degrees off zenith. The
angle from zenith corresponds to the sum of the tangents of the vector
forces at work.

>For some reason everyone is thinking Wagner is stupid. We have talked in
>mail about this in the past. I think that he has a good idea, and with a
>lot of planing his club will do just fine.

I don't think he's stupid. I just think he doesn't have experience
with tethered balloons of this nature, and that he hasn't done the
math to see what angle the forces involved will yield. There are
three primary force vectors, lift, gravity, and wind loading. Those
are tied together by the catenary of the wire to yield the angle of
repose for the system. All the data you need is in the CRC Handbook.

If you've got a *lot* of excess lift, you can pull the wire more nearly
vertical for a given wind speed, but a lot of lift corresponds to a
large balloon, and that has a correspondingly large frontal area to
present to the wind, so the vectors still lead to a large angle off zenith.
The advantage of the lifting bodies is that they can supply lift *without*
a corresponding increase in frontal area, so they can reduce the angle
from zenith a lot more. Unfortunately, that puts more stress on the tether
too, so you have to go to a larger gauge, and that adds weight. It can be
a vicious circle.

If he lays out 2,000 to 10,000 feet of wire, he's creating an incredible
hazard if it gets away from him. The odds of it all coming down where
it'll miss a power line are pretty slim. Though for a Wx balloon to lift
that much he's going to have to use #30 or smaller, and it'll just vaporize
when it tangles with the power lines (automatic fuse). (And it'll break

under it's own weight and wind loading before it reaches full height anyway.)

Now there is another way. If he uses a large (manned) hot air balloon, he can three point tether it with heavy steel cable and just hang the antenna wire vertically below it. That may be what you're thinking of. He's not going to reach 2,000 to 10,000 feet that way, however. Something on the order of 300 feet might be possible before stresses on the central tether connection to the balloon get out of hand during wind gusts.

(Of course he could use a *huge* tethered blimp, such as TV Marti uses, and reach 10,000 feet, but I doubt he can afford that, Congress is debating whether the US can afford that.)

Yes ... but not without problems.

I posted a WTB in alt.ham-radio.am last week, and it duly appeared.
Since then there've been no other postings in that ng.

I sent the WTB posting again last night and it got bounced back by
my ISP as 'No valid newsgroups specified'

Well goody for you.

Let me put it this way. Many people are never going to use CW. The work
required to learn CW is pointless. Do you enjoy pointless? I think you
should have to learn braille in order to get you license. It makes just
as much sense.

I don't know why I'm jumping in here, the old "I had to do it so you
should have to do it also" is a rather shortsighted attitude. It goes
to show that improvement of ham operators is the least of your worries,
you just worried someone might get the priviledges with less work. On
the other hand... I get the fealing that alot of CW proponents are afraid
that they wouldn't be able to deal with real competance tests. If CW went
away you might actually have to demonstrate theory competance with a
non-gimmee test.

So, is it better to keep numbers down via ancient skills that are unnecessary,
or is it better to force people to develop modern, relevant skills?

As for those that want the CW frequencies, that's fine, those people can
learn morse since it will be relevant to them. I would be all for
maintaining those as pure CW.

William,

The NIR-10 4.0 upgrade should allow you to duplicate ANY 3.0 setting,
since all the original code is still there - just with added features.
I made sure of that when I wrote the upgrade code. If you need a set
of the old v3.0 EPROMs to compare with, give me a call at JPS.

Why not have a techology filter? In fact, why have a filter at all? The answer is alluded to by your next paragraph.

>>Face it, nobody really builds their own radios any more. Look in
>>the ham radio magazines and what do you see? Answer: mega-
>>dollar ham radios. This is the only difference between a ham radio
>>operator and a C.B. radio operator.

It is that *everybody* used to behave with more decorum, until decorum and politeness gave way to PCism and everybody's right to say whatever they want, whenver they want, dammit!

This is a general societal problem (and ham radio is more or less a microcosm of society). The problem isn't solved by simply having a lid filter. Besides -- no filter is perfect. Remember Murphy's Third Law: Foolproof systems give rise to more clever fools.

>>If this attitude were pervasive, we would have penmanship tests to
>>use a state park, pie eating contests to drive on the public
>>highways and height requirements to run for elected office. The
>>code test is simply no longer relevant to operating a ham radio.
>your analogies are shaky at best.

Maybe, maybe not. It remains to be seen (just ask over in rec.radio.amateur.policy someday) exactly what benefit, if any, continued Morse training has for the Amateur Radio Service.

>The influx of poor operators since the advent of the no-code license is
>staggering. I have never heard so much foul language and obnoxious

>license classes. Anyone who truly wants a ham license will find that
>learning the code at the required snail's pace is no barrier at all...or
>am I overestimating people's abilities?

No, but if you're simply in a mood to create artificial barriers, make them *good* ones. How about jumping out of an empty oil barrel? Or ditch-digging (Gary KE4ZV's favorite)? Let's really make it a good one: each license applicant must successfully lobby the FCC to turn one of our UHF+ allocations into "amateur exclusive".

As for the lack of good operators, there has also been a lack of good elmering, especially by the W#xxx and K#xxx calls from days of old who look down their noses at the new licensees. Some attitude adjustment is called for all around.

QSL has two official usages. "QSL?" means "Do you acknowledge receipt
of my traffic?" "QSL" means "I acknowledge receipt of your traffic."
They are procedural signals intended to be used for *over the air*
message handling, nothing about postal cards or snail mail is implied.

Subject: Using DSP to emulate a TNC

Hey guys/gals/other:

I am trying to use digital signal processing to emulate a TNC for packet
communication. Right now, I'm at the very start of my research, so I'm
looking for resource information.

1) What are the best WWW locations for DSP information?
(My crawler shows quite a few, but I don't know which ones are useful)

2) Where can I find documentation detailing how a TNC operates?
I know vaguely what is in there, but I really need the details.

Feel free to respond via this thread or by direct email.
Thanks,
Vince

Six is becoming popular, but due to the current state of the sunspot cycle you won't find much beyond local activity except during the infrequent band openings. *Then* it can get real busy. But if you're going to restrict yourself to one VHF+ band, I'd think seriously about a 70cm or 2m SSB rig before I'd set up for 6m. That's because there are many more operators, and more enhanced propagation modes to explore, on those bands. Your "dx" won't be global in scope (unless you go for EME), but it will be more frequent and more hectic as you chase tropo, aurora, and satellites.

However, if you're patient, a 3 element beam and a 100 watts on 6 meters can give you globe spanning results when the band does open. Meteor scatter also works better here than on 2 meters. In 4 or 5 years when the sunspot cycle comes around, 6 will be open to somewhere in the world almost daily.

Gary

>email - ee95ajm@brunel.ac.uk

Well 6m is good in the summer with sporadic 'e' but e's each day
become a bit boring especially after your log fills up with italians
and balkan area people. When the DX is around you might need a bit of
power to break the pile up.....and when there are no 'e's about it's
as dead as a dodo. Until conditions improve I'd leave it as your main
band.

For my money I'd go for 2m, much more activity especially in the
South, up here in the sticks it's quiet. But you could get a rig such
as an IC251e (around 300UKP) and add an amplifier to take it beyond
the 10 watts it normally gives out. For example, with 70 watts and a
9ele yagi I managed to work down to Reading from Edinburgh last night.
Ok it was a prearranged sked but that appears to be the only way to
get a long distance qso these days.......

Cheers,

Gavin,

Date: (null)
From: (null)

A German group leaves home today for an operation from Christmas Island as VK9XY until Tuesday the 13th of February. They then go on to the Cocos-Keeling Islands as plan activity as VK9CR between the 14th and 23rd of February. They will operate CW and SSB on 160 to 6 metres, plus RTTY and satellites.

And from Barbados, VE4GV plans to be active as 8P9EN from Thursday the 8th until the 15th of February on all bands 80 to 10 metres, mostly CW.

Next the Rally News:

The Lancastrian Rally is taking place at the University of Lancaster today, the 4th of February. The doors open at 11.00, or 10.30am for disabled visitors.

Also today, the South Essex Amateur Radio Society Radio Rally is taking place at The Paddocks, Long Road, Canvey Island. The event includes RSGB Morse Tests on demand - candidates are reminded that they will need to take the test fee and two passport-size photographs along. Doors open at 10.30 am.

Next Sunday, the 11th of February, the Northern Cross Rally takes place at the Thornes Park Athletics Stadium on the A642 Horbury Road in Wakefield, which is a new venue for this rally. The event features the usual dealers, a bookstall and bring-and-buy stand, an RSGB Propagation Studies Committee stand and Morse Tests on demand. Please bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at the rally. Talk-in will be provided on 2 metres channel S22 and 70 centimetres channel SU22, and further details can be obtained from G0FLX on 0113 238 3622.

Also on Sunday the 11th, the Cambridge and District Amateur Radio Club Rally takes place at the Ambulance Station at Addenbrookes Hospital. The event features trade stands, a bring and buy stall and car boot sale. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For more details contact John, G0GKP, on 01954 200072.

And now a date for your diary:

The RSGB National VHF Convention takes place at the usual venue - Sandown Park in Surrey - two weeks from today, on Sunday the 18th of February. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show and special interest groups. Full details are in the February edition of Radio Communication.

A new award in memory of Cyril James, G3VVB, and aimed at the home constructor of microwave equipment, will be presented for the first time at the RSGB VHF Convention. If you have an item of home-made microwave equipment and you are proud of the way you've constructed it, then why not bring it along to the Convention and enter it in the competition? The equipment can be constructed from any design, or from a kit - what the judges will be looking for particularly is quality of construction and finish. If you cannot attend the Convention in person, you may send detailed photographs and a written description to Steve Davies, G4KNZ, whose address is correct in the RSGB Call Book.

Now for the HF contest news:

The final session of the RSGB LF Cumulative is on 80 metres today, Sunday the 4th of February, between 16 and 1800 UTC. The rules were published in last September's RadCom, but please note that the dates were given incorrectly in September. The correct dates are shown in the February RadCom.

Next weekend, the RSGB 1.8MHz CW Contest takes place from 2100 UTC on Saturday the 10th until 0100 UTC on Sunday the 11th of February. The rules are in the September RadCom.

And the Dutch PACC Contest takes place on CW and SSB for 24 hours from 1200 UTC on Saturday the 10th. Brief rules are on page 22 of the February RadCom.

Next some VHF contest news:

The 432 MHz RSGB Affiliated Societies and Fixed Station Contest is taking place today, the 4th of February, between 09 and 1500 UTC.

And next Sunday, the 11th of February, the third session out of five in the RSGB 70 MHz Cumulative Contests will take place between 10 and 1200UTC. The rules for all these contests can be found in last September's RadCom.

And now the solar factual data:

The period from the 22nd to the 28th of January saw solar activity at very low levels and the geomagnetic field at quiet levels. Only one small sunspot group remained on the solar disc, and the mean was 7. Solar flux levels increased very slightly from 72 units on the 22nd to 74 units on the 25th. They remained at that level until the 28th and the average was 73 units. No solar flares were reported. Electron fluence declined slightly but remained at a moderate level. X-Ray flux remained at its minimum level of A1.0 every day. The 90-day solar flux average on the 28th was 74 units, the same as last week.

Geomagnetic activity was "quiet", with the levels down to only Ap 3 units on the 25th. The average was Ap 5 units. The aa indices, as supplied by the British Geological Survey for the period from the 16th to the 22nd of January, increased from "unsettled" on the 16th with 15 nanoTeslas recorded, to "active" levels which lasted through to the

20th, when conditions returned to "unsettled". The most disturbed day was the 17th, with 26 nanoTeslas. The average for the period was 20 nanoTeslas, which is just K3.

I'll repeat the figures: spots - 7, flux - 73, Ap index - 5, X-Ray flux - A1.0.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 19th to the 25 of January, improved every day from 5.1MHz on the 19th, to 6.7MHz by the 25th. The average was 6.1MHz. The darkness hour lows decreased slightly from 2.2MHz on the 19th to 1.9MHz by the 23rd, but then increased to end the period at 2.5MHz. The average was 2.2MHz. The daytime highs took place between 0900 and 1400 hours. The darkness hour lows took place between 0400 and 0600 hours every day. Two short periods of sporadic E took place on the 22nd and the 24th.

I'll repeat the figures: highs - 6.1MHz, lows - 2.2MHz.

And lastly the solar forecast:

This week the quiet side of the sun is expected to rotate into view and later in the week the solar disc could become spotless. Solar flux levels are expected to decline to the high 60s. Geomagnetic activity is expected to be very quiet, but later in the week activity could increase to "active" conditions. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north, but levels could decline towards next weekend. The darkness hour lows are expected to be about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Victor and G7 Whisky Alfa series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Quebec series.

The main reason I see for allowing satellite contests for field day is that field day is generally a club activity and having a satellite station exposes satellite operation to hams that do not use the mode.

As far as I'm concerned we have way to many contests already. Field day is the only contest that I support, since it involves so much more than just firing up you multakilowatt station and seeing who you can step on. But I guess different strokes for different folks.

Hmmm, well in rec.radio, maybe that works. But I'm not sure that'll make
a good battle-flag here in a.s.d! Besides, some of us have developed a
bizarre fondness for Burt. (Hey, I read Dilbert, too!) Years ago I used
to have a pet black rat snake I was sorta fond of, too. He smelled funny,
but he was great for getting rid of dead mice...

And aside from some of the personal attack flame-wars, *some* of Burt's
inanities stimulate thought and replies, which isn't always a terrible
thing.

For ROUTINE renewals, you don't use the 610 anymore, Robert. Yes - I
know - it surprised me, too. Mine expires in March. FCC sent me a
simple form many weeks back, which I signed to acknowledge that I
wanted it renewed, and sent it back. They sent the form without being
asked. Nice to have the feds doing something right!

If your address is still good in their files, you probably will get
that form soon. If not you will then REALLY need a 610 to change the
address!

Date: 1 Feb 1996 20:57:00 GMT
From: Kevin Schmidt <kschmidt@ihnp4.ucsd.edu>
Subject: Requesting contest QSLs [was QSL etiquette]

I have read the "To QSL or not" topics. I personally reply to
all QSLs received. I also find it hard to believe that anyone, who has
time to get on the air, is too busy to write "confirmed by W1ABC", sign
the card they received, and stick it in the supplied SASE. But if
someone wants to toss away all the QSLs and SASEs he receives that's
his right. It is amusing to hear a contester suggest that he expects
operators to ask, during a contest contact, if he will reply to a QSL
request. I can see it now instead of something like this. (BTW, In my
imagination, this is in morse, and op1 is sending 35 words per minute
and op2 is sending 15 wpm.)

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY
op1: tu cq test de w1abc

I now realize that at least one contester wants:

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY and by the way, I really need Maine to finish my WAS
if I send you a card with an sase would you be willing to send
me yours k
op1: r no k
op2: ok 73 w2xyz
op1: cq test de w1abc

This may reduce the qso rate somewhat for op1, but now that I know
what's expected...

From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: <<FREE WWW Ham Radio Classified Page with Search Engine>>

The Raymond Sarrio Company9s Ham Radio WWW site is proud to announce a
FREE Ham Radio classified advertising page at
http://www.csz.com/sarrio.html. This new classified page will allow Hams
to find equipement with the help of a search engine--no need to scroll
through 1009s of listing before you find that special piece of gear. Plus,
when you find the gear you'er interested in, you are also provided with
easy point-and-click e-mail access, directly to the Ham that listed the
item.

For those Hams with gear to sell, take note! there is NO charge to list
your equipment within Ham Classifieds, and there will be no posting time
delays. Your posting(s) will go on-line in our classified search engine
in about 1 hour. All you need do is fill out a simple forms page, and upon its
(point-and-click) submission your 3For Sale2 classified is immediately
on-line.

I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.

Give it a try, and let me know how you like it (we are still beta testing)
739s Ray

Don't count on any sites carrying those alt groups. Here at UH we're
already max'd out at some 10,000 groups.

I guess throwing up a new repeater that duplicate coverage 10-fold isn't
enough to feed one's ego anymore - now one has to resort to creating
alt newsgroups... (Watch that blood pressure!)

From: David Hough <dave@llondel.demon.co.uk>
Subject: GB2RS News 4th February 1996

Good morning. It's Sunday the 4th of February and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The RSGB responded quickly to reports on radio and TV, and in newspapers, about the Duke of Edinburgh's phone conversation being taped by "a radio amateur" or "radio ham". A press release was sent to all national newspapers and to radio and TV stations stating that "there is no evidence whatsoever" that the telephone conversation was intercepted and recorded by a licensed radio amateur. The individual named in the newspapers as taping the Duke of Edinburgh's phone conversation is not a member of the RSGB and it is firmly believed that he does not hold an amateur radio licence. The RSGB press release also pointed out that equipment capable of receiving analogue mobile phones is widely available and may be purchased quite legally by anyone.

The RSGB General Manager, Peter Kirby, G0TWW, was also interviewed by Independent Radio News, Associated Press, Sky TV News, and Channel 1 Cable TV on Tuesday and Wednesday over the matter.

A new 50MHz GB2RS news broadcast serving Central Scotland is starting today, the 4th of February, at 11.30 am. Initially, it will be for an experimental period of three months but will be continued if it proves to be a success. The transmission will be from the station of Tom Menzies, GM1GEQ, and will be on 51.530 MHz with vertical polarisation. Reports will be welcome, and should be sent to GM1GEQ via the RSGB QSL bureau.

The Barnsley and District Amateur Radio Club is co-ordinating a coach trip to Friedrichshafen in June on behalf of the RSGB. The Friedrichshafen 'Hamfest' is Europe's largest amateur radio exhibition. The coach will depart on Wednesday the 26th of June and return on Tuesday the 2nd of July and pick-ups can be arranged at pre-determined locations en route. Places are allocated on a first come, first served basis so contact the organiser, Ernie Bailey, G4LUE, without delay. He is available on 01226 716339, or 0836 748958, between 6.00 and 8.00pm.

There is a new QSL Bureau Sub-Manager for the GM0AAA to LZZ series of callsigns. He is Fred Roe, GM0ALS, and his address is 8 South Gyle Gardens, Edinburgh. The postcode is EH12 7RZ. The address may also be found in the RSGB Call Book under GM0ALS.

The Radio Amateur Invalid and Blind Club Northern Ireland Area is holding a flag day collection in the Ballymena town centre shopping complex on Friday the 9th of February between about 10.00 am and 9.00 pm. Anyone who can help for a few hours should contact David Caldwell, GI0HOW, on 01232 471370, or send a fax to him on 01232 471980, to arrange times and identification permits.

On Saturday the 10th of February, the Lincoln Short Wave Club is celebrating its 75th anniversary. The club was formed as the Lincoln Wireless and Scientific Society in 1921. There will be an exhibition and special event station at the Lawn Complex, Lincoln, from 12 noon until 5.00 pm, with a celebratory dinner in the evening. The day's events will be opened jointly by the Mayor of Lincoln, Councillor Geoff Ellis, and RSGB President Peter Sheppard, G4EJP. For further details of this, or the club's other activities, please contact John Middleton, G8VGF, on 01522 525760.

The annual Guides 'Thinking Day on the Air' takes place over the weekend of the 24th and 25th of February. A pack is available from RSGB HQ consisting of a list of participating special event stations and details of the countries which permit third party Greetings Messages during this event. Groups using a GX or similar prefix instead of a GB call are asked to contact Mrs Eva Telenius-Lowe at RSGB Headquarters by this Friday, the 9th of February, in order to be included on the list of participating stations. If you would like the pack, please send an A4-size self-addressed envelope, with 38p in stamps, to Eva at RSGB HQ.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

>as a replacement part. Being mechanical, it is the item
>that most often goes on a 720A. So when it goes, so does
>the radio . . .
> Jeff Shelton/KS4TL

Fact is the company who made the relay for ICOM in Japan went out of business several years ago. Before that happened ICOM tried to forcast the requirements for the relay for the next 5 years. Thye used them up in the 9 to 10 years that have passed since that time.

>5000 lbs of lift required. As you can see, hot air is not going to cut
>it!

That's a rather incredible amount of lift for a weather balloon (which
of course *isn't* a hot air balloon anyway). I don't know where you're
getting your figures, but 350 pounds for 500 feet of #14 is absurd (it's
also 75% of the yield limit of the wire, so it wouldn't take much catenary
loading from the wind to exceed the limit). 500 feet of bare 14 gauge copper
wire only weighs about 6.25 pounds. That's too much load for a 10 foot Wx
balloon, of course, but you'd use something a bit thinner, say #22, which
would only weigh a pound for 500 feet. It'd break in a 24 MPH gust, though.

And I guarantee that if there is any wind at all, that balloon is going
to lay out along the ground instead of standing overhead. With a 10 foot
balloon, #22 wire, and a 15 MPH wind, that corresponds to a slant angle
of about 84 degrees off zenith. With very light breezes, the balloon may
stand as high as 45 degrees off zenith, but it would have to be dead calm
for it to approach zenith more closely than that. A lifting body, however,
like the advertising blimps, can be set to rise into the wind, and they can
approach zenith fairly closely, to better than 30 degrees off zenith. The
angle from zenith corresponds to the sum of the tangents of the vector
forces at work.

>For some reason everyone is thinking Wagner is stupid. We have talked in
>mail about this in the past. I think that he has a good idea, and with a
>lot of planing his club will do just fine.

I don't think he's stupid. I just think he doesn't have experience
with tethered balloons of this nature, and that he hasn't done the
math to see what angle the forces involved will yield. There are
three primary force vectors, lift, gravity, and wind loading. Those
are tied together by the catenary of the wire to yield the angle of
repose for the system. All the data you need is in the CRC Handbook.

If you've got a *lot* of excess lift, you can pull the wire more nearly vertical for a given wind speed, but a lot of lift corresponds to a *large* balloon, and that has a correspondingly large frontal area to present to the wind, so the vectors still lead to a large angle off zenith. The advantage of the lifting bodies is that they can supply lift *without* a corresponding increase in frontal area, so they can reduce the angle from zenith a lot more. Unfortunately, that puts more stress on the tether too, so you have to go to a larger gauge, and that adds weight. It can be a vicious circle.

If he lays out 2,000 to 10,000 feet of wire, he's creating an incredible hazard if it gets away from him. The odds of it all coming down where it'll miss a power line are pretty slim. Though for a Wx balloon to lift that much he's going to have to use #30 or smaller, and it'll just vaporize when it tangles with the power lines (automatic fuse). (And it'll break under it's own weight and wind loading before it reaches full height anyway.)

Now there is another way. If he uses a large (manned) hot air balloon, he can three point tether it with heavy steel cable and just hang the antenna wire vertically below it. That may be what you're thinking of. He's not going to reach 2,000 to 10,000 feet that way, however. Something on the order of 300 feet might be possible before stresses on the central tether connection to the balloon get out of hand during wind gusts.

(Of course he could use a *huge* tethered blimp, such as TV Marti uses, and reach 10,000 feet, but I doubt he can afford that, Congress is debating whether the US can afford that.)

Yes ... but not without problems.

I posted a WTB in alt.ham-radio.am last week, and it duly appeared. Since then there've been no other postings in that ng.

I sent the WTB posting again last night and it got bounced back by my ISP as 'No valid newsgroups specified'

Well goody for you.

Let me put it this way. Many people are never going to use CW. The work required to learn CW is pointless. Do you enjoy pointless? I think you should have to learn braille in order to get you license. It makes just as much sense.

I don't know why I'm jumping in here, the old "I had to do it so you should have to do it also" is a rather shortsighted attitude. It goes to show that improvement of ham operators is the least of your worries, you just worried someone might get the priviledges with less work. On the other hand... I get the fealing that alot of CW proponents are afraid that they wouldn't be able to deal with real competance tests. If CW went away you might actually have to demonstrate theory competance with a non-gimmee test.

So, is it better to keep numbers down via ancient skills that are unnecessary, or is it better to force people to develop modern, relevant skills?

As for those that want the CW frequencies, that's fine, those people can learn morse since it will be relevant to them. I would be all for maintaining those as pure CW.

William,

The NIR-10 4.0 upgrade should allow you to duplicate ANY 3.0 setting,
since all the original code is still there - just with added features.
I made sure of that when I wrote the upgrade code. If you need a set
of the old v3.0 EPROMs to compare with, give me a call at JPS.

Why not have a techology filter? In fact, why have a filter at all? The
answer is alluded to by your next paragraph.

>>Face it, nobody really builds their own radios any more. Look in
>>the ham radio magazines and what do you see? Answer: mega-
>>dollar ham radios. This is the only difference between a ham radio
>>operator and a C.B. radio operator.

>to.

It is that *everybody* used to behave with more decorum, until decorum and
politeness gave way to PCism and everybody's right to say whatever they
want, whenver they want, dammit!

This is a general societal problem (and ham radio is more or less a
microcosm of society). The problem isn't solved by simply having a lid
filter. Besides -- no filter is perfect. Remember Murphy's Third Law:
Foolproof systems give rise to more clever fools.

>>If this attitude were pervasive, we would have penmanship tests to
>>use a state park, pie eating contests to drive on the public
>>highways and height requirements to run for elected office. The
>>code test is simply no longer relevant to operating a ham radio.
>your analogies are shaky at best.

Maybe, maybe not. It remains to be seen (just ask over in
rec.radio.amateur.policy someday) exactly what benefit, if any, continued
Morse training has for the Amateur Radio Service.

>The influx of poor operators since the advent of the no-code license is
>staggering. I have never heard so much foul language and obnoxious

>license classes. Anyone who truly wants a ham license will find that
>learning the code at the required snail's pace is no barrier at all...or
>am I overestimating people's abilities?

No, but if you're simply in a mood to create artificial barriers, make them
good ones. How about jumping out of an empty oil barrel? Or ditch-digging
(Gary KE4ZV's favorite)? Let's really make it a good one: each license
applicant must successfully lobby the FCC to turn one of our UHF+
allocations into "amateur exclusive".

As for the lack of good operators, there has also been a lack of good
elmering, especially by the W#xxx and K#xxx calls from days of old who look
down their noses at the new licensees. Some attitude adjustment is called
for all around.

QSL has two official usages. "QSL?" means "Do you acknowledge receipt
of my traffic?" "QSL" means "I acknowledge receipt of your traffic."
They are procedural signals intended to be used for *over the air*
message handling, nothing about postal cards or snail mail is implied.

Subject: Using DSP to emulate a TNC

Hey guys/gals/other:

I am trying to use digital signal processing to emulate a TNC for packet communication. Right now, I'm at the very start of my research, so I'm looking for resource information.

1) What are the best WWW locations for DSP information?
(My crawler shows quite a few, but I don't know which ones are useful)

2) Where can I find documentation detailing how a TNC operates?
I know vaguely what is in there, but I really need the details.

Feel free to respond via this thread or by direct email.
Thanks,
Vince

From: dringer@access.mountain.net (Dan Ringer)

Subject: What does CQ mean?

I had always thought that CQ was "come quick" but it could be an "old wyfe's tail."

The distress prosign was CQD (the D stood for "danger"?)

When the Titanic went down they transmitted CQD, then tried the (then) recently adopted distress signal SOS - proported to be the
first use of SOS.

No, I don't have the references for the above. Just passing it along.

Dan, K8WV

Six is becoming popular, but due to the current state of the sunspot cycle you won't find much beyond local activity except during the infrequent band openings. *Then* it can get real busy. But if you're going to restrict yourself to one VHF+ band, I'd think seriously about a 70cm or 2m SSB rig before I'd set up for 6m. That's because there are many more operators, and more enhanced propagation modes to explore, on those bands. Your "dx" won't be global in scope (unless you go for EME), but it will be more frequent and more hectic as you chase tropo, aurora, and satellites.

However, if you're patient, a 3 element beam and a 100 watts on 6 meters can give you globe spanning results when the band does open. Meteor scatter also works better here than on 2 meters. In 4 or 5 years when the sunspot cycle comes around, 6 will be open to somewhere in the world almost daily.

Gary

>email - ee95ajm@brunel.ac.uk

Well 6m is good in the summer with sporadic 'e' but e's each day
become a bit boring especially after your log fills up with italians
and balkan area people. When the DX is around you might need a bit of
power to break the pile up.....and when there are no 'e's about it's
as dead as a dodo. Until conditions improve I'd leave it as your main
band.

For my money I'd go for 2m, much more activity especially in the
South, up here in the sticks it's quiet. But you could get a rig such
as an IC251e (around 300UKP) and add an amplifier to take it beyond
the 10 watts it normally gives out. For example, with 70 watts and a
9ele yagi I managed to work down to Reading from Edinburgh last night.
Ok it was a prearranged sked but that appears to be the only way to
get a long distance qso these days.......

Cheers,

Gavin,

****

Date: (null)
From: (null)

A German group leaves home today for an operation from Christmas Island as VK9XY until Tuesday the 13th of February. They then go on to the Cocos-Keeling Islands as plan activity as VK9CR between the 14th and 23rd of February. They will operate CW and SSB on 160 to 6 metres, plus RTTY and satellites.

And from Barbados, VE4GV plans to be active as 8P9EN from Thursday the 8th until the 15th of February on all bands 80 to 10 metres, mostly CW.

Next the Rally News:

The Lancastrian Rally is taking place at the University of Lancaster today, the 4th of February. The doors open at 11.00, or 10.30am for disabled visitors.

Also today, the South Essex Amateur Radio Society Radio Rally is taking place at The Paddocks, Long Road, Canvey Island. The event includes RSGB Morse Tests on demand - candidates are reminded that they will need to take the test fee and two passport-size photographs along. Doors open at 10.30 am.

Next Sunday, the 11th of February, the Northern Cross Rally takes place at the Thornes Park Athletics Stadium on the A642 Horbury Road in Wakefield, which is a new venue for this rally. The event features the usual dealers, a bookstall and bring-and-buy stand, an RSGB Propagation Studies Committee stand and Morse Tests on demand. Please bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at the rally. Talk-in will be provided on 2

metres channel S22 and 70 centimetres channel SU22, and further details can be obtained from G0FLX on 0113 238 3622.

Also on Sunday the 11th, the Cambridge and District Amateur Radio Club Rally takes place at the Ambulance Station at Addenbrookes Hospital. The event features trade stands, a bring and buy stall and car boot sale. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For more details contact John, G0GKP, on 01954 200072.

And now a date for your diary:

The RSGB National VHF Convention takes place at the usual venue - Sandown Park in Surrey - two weeks from today, on Sunday the 18th of February. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show and special interest groups. Full details are in the February edition of Radio Communication.

A new award in memory of Cyril James, G3VVB, and aimed at the home constructor of microwave equipment, will be presented for the first time at the RSGB VHF Convention. If you have an item of home-made microwave equipment and you are proud of the way you've constructed it, then why not bring it along to the Convention and enter it in the competition? The equipment can be constructed from any design, or from a kit - what the judges will be looking for particularly is quality of construction and finish. If you cannot attend the Convention in person, you may send detailed photographs and a written description to Steve Davies, G4KNZ, whose address is correct in the RSGB Call Book.

Now for the HF contest news:

The final session of the RSGB LF Cumulative is on 80 metres today, Sunday the 4th of February, between 16 and 1800 UTC. The rules were published in last September's RadCom, but please note that the dates were given incorrectly in September. The correct dates are shown in the February RadCom.

Next weekend, the RSGB 1.8MHz CW Contest takes place from 2100 UTC on Saturday the 10th until 0100 UTC on Sunday the 11th of February. The rules are in the September RadCom.

And the Dutch PACC Contest takes place on CW and SSB for 24 hours from 1200 UTC on Saturday the 10th. Brief rules are on page 22 of the February RadCom.

Next some VHF contest news:

The 432 MHz RSGB Affiliated Societies and Fixed Station Contest is taking place today, the 4th of February, between 09 and 1500 UTC.

And next Sunday, the 11th of February, the third session out of five in the RSGB 70 MHz Cumulative Contests will take place between 10 and 1200UTC. The rules for all these contests can be found in last September's RadCom.

And now the solar factual data:

The period from the 22nd to the 28th of January saw solar activity at very low levels and the geomagnetic field at quiet levels. Only one small sunspot group remained on the solar disc, and the mean was 7. Solar flux levels increased very slightly from 72 units on the 22nd to 74 units on the 25th. They remained at that level until the 28th and the average was 73 units. No solar flares were reported. Electron fluence declined slightly but remained at a moderate level. X-Ray flux remained at its minimum level of A1.0 every day. The 90-day solar flux average on the 28th was 74 units, the same as last week.

Geomagnetic activity was "quiet", with the levels down to only Ap 3 units on the 25th. The average was Ap 5 units. The aa indices, as supplied by the British Geological Survey for the period from the 16th to the 22nd of January, increased from "unsettled" on the 16th with 15 nanoTeslas recorded, to "active" levels which lasted through to the 20th, when conditions returned to "unsettled". The most disturbed day was the 17th, with 26 nanoTeslas. The average for the period was 20 nanoTeslas, which is just K3.

I'll repeat the figures: spots - 7, flux - 73, Ap index - 5, X-Ray flux - A1.0.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 19th to the 25 of January, improved every day from 5.1MHz on the 19th, to 6.7MHz by the 25th. The average was 6.1MHz. The darkness hour lows decreased slightly from 2.2MHz on the 19th to 1.9MHz by the 23rd, but then increased to end the period at 2.5MHz. The average was 2.2MHz. The daytime highs took place between 0900 and 1400 hours. The darkness hour lows took place between 0400 and 0600 hours every day. Two short periods of sporadic E took place on the 22nd and the 24th.

I'll repeat the figures: highs - 6.1MHz, lows - 2.2MHz.

And lastly the solar forecast:

This week the quiet side of the sun is expected to rotate into view and later in the week the solar disc could become spotless. Solar flux levels are expected to decline to the high 60s. Geomagnetic activity is expected to be very quiet, but later in the week activity could increase to "active" conditions. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north, but levels could decline towards next weekend. The darkness hour lows are expected to be about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Victor and G7 Whisky Alfa series, and Novice calls in the 2 0 Alfa

November and 2 1 Echo Quebec series.

>radio for its time, but not something I'd want to put back on the air
>today.

Hi all!

I have also owned the Clegg FM-27B and reflect the same problems with
its spurious output. I also had severe intermod and overload promlems
on receive, as well. It was a novelty radio to own, though, in a day
when most radios were crystal controlled and had only 6 to 12 channels.
If I remember correctly, the Clegg also was one of the few that put

out a full 25 watts in a day when 10 watts was the norm for most rigs.

As far as the Regency, I have never owned an HR-2, but I still own an HR-6, 6 meter rig. Those radios have the most un-stable transmitter I have ever seen. You can keep the spurs down if you tune the transmitter on the frequency you intend to use most, into the antenna you will be using. Don't change frequencies, though, because you will throw spurs all over the band!

I operate on 52.525 Mhz with this radio, and if my mobile antenna gets wet, causing the SWR to rise, The transmitter goes nuts and I start to bring up a repeater that has its input on 51.80, almost 2 miles away! Now thats a sloppy transmitter!!!

I would like to see more stories relating to the classic radios going back to the days when repeaters were just becoming popular----back in the days when you were lucky to have 10 watts, a Ringo, and 6 channels. It would be much better reading than all of the mud that is being slung back and forth on this newsgroup!

Hmmm, well in rec.radio, maybe that works. But I'm not sure that'll make
a good battle-flag here in a.s.d! Besides, some of us have developed a
bizarre fondness for Burt. (Hey, I read Dilbert, too!) Years ago I used
to have a pet black rat snake I was sorta fond of, too. He smelled funny,
but he was great for getting rid of dead mice...

And aside from some of the personal attack flame-wars, *some* of Burt's
inanities stimulate thought and replies, which isn't always a terrible
thing.

>TIA 73s
==========
For ROUTINE renewals, you don't use the 610 anymore, Robert. Yes - I
know - it surprised me, too. Mine expires in March. FCC sent me a
simple form many weeks back, which I signed to acknowledge that I
wanted it renewed, and sent it back. They sent the form without being
asked. Nice to have the feds doing something right!

If your address is still good in their files, you probably will get
that form soon. If not you will then REALLY need a 610 to change the
address!

From: Kevin Schmidt <kschmidt@ihnp4.ucsd.edu>
Subject: Requesting contest QSLs [was QSL etiquette]

I have read the "To QSL or not" topics. I personally reply to
all QSLs received. I also find it hard to believe that anyone, who has
time to get on the air, is too busy to write "confirmed by W1ABC", sign
the card they received, and stick it in the supplied SASE. But if
someone wants to toss away all the QSLs and SASEs he receives that's
his right. It is amusing to hear a contester suggest that he expects
operators to ask, during a contest contact, if he will reply to a QSL
request. I can see it now instead of something like this. (BTW, In my
imagination, this is in morse, and op1 is sending 35 words per minute
and op2 is sending 15 wpm.)

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY
op1: tu cq test de w1abc

I now realize that at least one contester wants:

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY and by the way, I really need Maine to finish my WAS
if I send you a card with an sase would you be willing to send
me yours k
op1: r no k
op2: ok 73 w2xyz
op1: cq test de w1abc

This may reduce the qso rate somewhat for op1, but now that I know
what's expected...

From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: <<FREE WWW Ham Radio Classified Page with Search Engine>>

The Raymond Sarrio Company9s Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at http://www.csz.com/sarrio.html. This new classified page will allow Hams to find equipement with the help of a search engine--no need to scroll through 1009s of listing before you find that special piece of gear. Plus, when you find the gear you'er interested in, you are also provided with easy point-and-click e-mail access, directly to the Ham that listed the item.

For those Hams with gear to sell, take note! there is NO charge to list your equipment within Ham Classifieds, and there will be no posting time delays. Your posting(s) will go on-line in our classified search engine in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission your 3For Sale2 classified is immediately on-line.

I will be purging the classified listings initially, about once every month, but that timeline will shorten as our classified numbers grow.

Give it a try, and let me know how you like it (we are still beta testing)
739s Ray

Don't count on any sites carrying those alt groups. Here at UH we're already max'd out at some 10,000 groups.

I guess throwing up a new repeater that duplicate coverage 10-fold isn't enough to feed one's ego anymore - now one has to resort to creating alt newsgroups... (Watch that blood pressure!)

From: David Hough <dave@llondel.demon.co.uk>
Subject: GB2RS News 4th February 1996

Good morning. It's Sunday the 4th of February and here is the GB2RS news
broadcast, prepared by the RSGB and intended for all radio amateurs and
short-wave listeners.

The RSGB responded quickly to reports on radio and TV, and in
newspapers, about the Duke of Edinburgh's phone conversation being taped
by "a radio amateur" or "radio ham". A press release was sent to all
national newspapers and to radio and TV stations stating that "there is
no evidence whatsoever" that the telephone conversation was intercepted
and recorded by a licensed radio amateur. The individual named in the
newspapers as taping the Duke of Edinburgh's phone conversation is not a
member of the RSGB and it is firmly believed that he does not hold an
amateur radio licence. The RSGB press release also pointed out that
equipment capable of receiving analogue mobile phones is widely
available and may be purchased quite legally by anyone.

The RSGB General Manager, Peter Kirby, G0TWW, was also interviewed by
Independent Radio News, Associated Press, Sky TV News, and Channel 1
Cable TV on Tuesday and Wednesday over the matter.

A new 50MHz GB2RS news broadcast serving Central Scotland is starting
today, the 4th of February, at 11.30 am. Initially, it will be for an

experimental period of three months but will be continued if it proves to be a success. The transmission will be from the station of Tom Menzies, GM1GEQ, and will be on 51.530 MHz with vertical polarisation. Reports will be welcome, and should be sent to GM1GEQ via the RSGB QSL bureau.

The Barnsley and District Amateur Radio Club is co-ordinating a coach trip to Friedrichshafen in June on behalf of the RSGB. The Friedrichshafen 'Hamfest' is Europe's largest amateur radio exhibition. The coach will depart on Wednesday the 26th of June and return on Tuesday the 2nd of July and pick-ups can be arranged at pre-determined locations en route. Places are allocated on a first come, first served basis so contact the organiser, Ernie Bailey, G4LUE, without delay. He is available on 01226 716339, or 0836 748958, between 6.00 and 8.00pm.

There is a new QSL Bureau Sub-Manager for the GM0AAA to LZZ series of callsigns. He is Fred Roe, GM0ALS, and his address is 8 South Gyle Gardens, Edinburgh. The postcode is EH12 7RZ. The address may also be found in the RSGB Call Book under GM0ALS.

The Radio Amateur Invalid and Blind Club Northern Ireland Area is holding a flag day collection in the Ballymena town centre shopping complex on Friday the 9th of February between about 10.00 am and 9.00 pm. Anyone who can help for a few hours should contact David Caldwell, GI0HOW, on 01232 471370, or send a fax to him on 01232 471980, to arrange times and identification permits.

On Saturday the 10th of February, the Lincoln Short Wave Club is celebrating its 75th anniversary. The club was formed as the Lincoln Wireless and Scientific Society in 1921. There will be an exhibition and special event station at the Lawn Complex, Lincoln, from 12 noon until 5.00 pm, with a celebratory dinner in the evening. The day's events will be opened jointly by the Mayor of Lincoln, Councillor Geoff Ellis, and RSGB President Peter Sheppard, G4EJP. For further details of this, or the club's other activities, please contact John Middleton, G8VGF, on 01522 525760.

The annual Guides 'Thinking Day on the Air' takes place over the weekend of the 24th and 25th of February. A pack is available from RSGB HQ consisting of a list of participating special event stations and details of the countries which permit third party Greetings Messages during this event. Groups using a GX or similar prefix instead of a GB call are asked to contact Mrs Eva Telenius-Lowe at RSGB Headquarters by this Friday, the 9th of February, in order to be included on the list of participating stations. If you would like the pack, please send an A4-size self-addressed envelope, with 38p in stamps, to Eva at RSGB HQ.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

Fact is the company who made the relay for ICOM in Japan went out of
business several years ago. Before that happened ICOM tried to forcast the
requirements for the relay for the next 5 years. Thye used them up in the
9 to 10 years that have passed since that time.

>5000 lbs of lift required. As you can see, hot air is not going to cut
>it!

That's a rather incredible amount of lift for a weather balloon (which
of course *isn't* a hot air balloon anyway). I don't know where you're
getting your figures, but 350 pounds for 500 feet of #14 is absurd (it's
also 75% of the yield limit of the wire, so it wouldn't take much catenary
loading from the wind to exceed the limit). 500 feet of bare 14 gauge copper
wire only weighs about 6.25 pounds. That's too much load for a 10 foot Wx
balloon, of course, but you'd use something a bit thinner, say #22, which
would only weigh a pound for 500 feet. It'd break in a 24 MPH gust, though.

And I guarantee that if there is any wind at all, that balloon is going to lay out along the ground instead of standing overhead. With a 10 foot balloon, #22 wire, and a 15 MPH wind, that corresponds to a slant angle of about 84 degrees off zenith. With very light breezes, the balloon may stand as high as 45 degrees off zenith, but it would have to be dead calm for it to approach zenith more closely than that. A lifting body, however, like the advertising blimps, can be set to rise into the wind, and they can approach zenith fairly closely, to better than 30 degrees off zenith. The angle from zenith corresponds to the sum of the tangents of the vector forces at work.

>For some reason everyone is thinking Wagner is stupid. We have talked in >mail about this in the past. I think that he has a good idea, and with a >lot of planing his club will do just fine.

I don't think he's stupid. I just think he doesn't have experience with tethered balloons of this nature, and that he hasn't done the math to see what angle the forces involved will yield. There are three primary force vectors, lift, gravity, and wind loading. Those are tied together by the catenary of the wire to yield the angle of repose for the system. All the data you need is in the CRC Handbook.

If you've got a *lot* of excess lift, you can pull the wire more nearly vertical for a given wind speed, but a lot of lift corresponds to a *large* balloon, and that has a correspondingly large frontal area to present to the wind, so the vectors still lead to a large angle off zenith. The advantage of the lifting bodies is that they can supply lift *without* a corresponding increase in frontal area, so they can reduce the angle from zenith a lot more. Unfortunately, that puts more stress on the tether too, so you have to go to a larger gauge, and that adds weight. It can be a vicious circle.

If he lays out 2,000 to 10,000 feet of wire, he's creating an incredible hazard if it gets away from him. The odds of it all coming down where it'll miss a power line are pretty slim. Though for a Wx balloon to lift that much he's going to have to use #30 or smaller, and it'll just vaporize when it tangles with the power lines (automatic fuse). (And it'll break under it's own weight and wind loading before it reaches full height anyway.)

Now there is another way. If he uses a large (manned) hot air balloon, he can three point tether it with heavy steel cable and just hang the antenna wire vertically below it. That may be what you're thinking of. He's not going to reach 2,000 to 10,000 feet that way, however. Something on the order of 300 feet might be possible before stresses on the central tether connection to the balloon get out of hand during wind gusts.

(Of course he could use a *huge* tethered blimp, such as TV Marti uses, and reach 10,000 feet, but I doubt he can afford that, Congress is debating whether the US can afford that.)

Yes ... but not without problems.

I posted a WTB in alt.ham-radio.am last week, and it duly appeared.
Since then there've been no other postings in that ng.

I sent the WTB posting again last night and it got bounced back by
my ISP as 'No valid newsgroups specified'

Well goody for you.

Let me put it this way. Many people are never going to use CW. The work
required to learn CW is pointless. Do you enjoy pointless? I think you

should have to learn braille in order to get you license. It makes just as much sense.

I don't know why I'm jumping in here, the old "I had to do it so you should have to do it also" is a rather shortsighted attitude. It goes to show that improvement of ham operators is the least of your worries, you just worried someone might get the priviledges with less work. On the other hand... I get the fealing that alot of CW proponents are afraid that they wouldn't be able to deal with real competance tests. If CW went away you might actually have to demonstrate theory competance with a non-gimmee test.

So, is it better to keep numbers down via ancient skills that are unnecessary, or is it better to force people to develop modern, relevant skills?

As for those that want the CW frequencies, that's fine, those people can learn morse since it will be relevant to them. I would be all for maintaining those as pure CW.

William,

The NIR-10 4.0 upgrade should allow you to duplicate ANY 3.0 setting,
since all the original code is still there - just with added features.
I made sure of that when I wrote the upgrade code. If you need a set
of the old v3.0 EPROMs to compare with, give me a call at JPS.

It is that *everybody* used to behave with more decorum, until decorum and
politeness gave way to PCism and everybody's right to say whatever they
want, whenver they want, dammit!

This is a general societal problem (and ham radio is more or less a
microcosm of society). The problem isn't solved by simply having a lid

filter. Besides -- no filter is perfect. Remember Murphy's Third Law:
Foolproof systems give rise to more clever fools.

>>If this attitude were pervasive, we would have penmanship tests to
>>use a state park, pie eating contests to drive on the public
>>highways and height requirements to run for elected office. The
>>code test is simply no longer relevant to operating a ham radio.
>your analogies are shaky at best.

Maybe, maybe not. It remains to be seen (just ask over in
rec.radio.amateur.policy someday) exactly what benefit, if any, continued
Morse training has for the Amateur Radio Service.

>The influx of poor operators since the advent of the no-code license is
>staggering. I have never heard so much foul language and obnoxious
>behavior on VHF before. If ham radio must transform itself into citizen's
>band radio to survive, then I say let it die and let's all become CBers.
>Until then, I would just as soon have the code requirement back for all
>license classes. Anyone who truly wants a ham license will find that
>learning the code at the required snail's pace is no barrier at all...or
>am I overestimating people's abilities?

No, but if you're simply in a mood to create artificial barriers, make them
good ones. How about jumping out of an empty oil barrel? Or ditch-digging
(Gary KE4ZV's favorite)? Let's really make it a good one: each license
applicant must successfully lobby the FCC to turn one of our UHF+
allocations into "amateur exclusive".

As for the lack of good operators, there has also been a lack of good
elmering, especially by the W#xxx and K#xxx calls from days of old who look
down their noses at the new licensees. Some attitude adjustment is called
for all around.

>contact with you via radio"

QSL has two official usages. "QSL?" means "Do you acknowledge receipt
of my traffic?" "QSL" means "I acknowledge receipt of your traffic."
They are procedural signals intended to be used for *over the air*
message handling, nothing about postal cards or snail mail is implied.

Subject: Using DSP to emulate a TNC

Hey guys/gals/other:

I am trying to use digital signal processing to emulate a TNC for packet
communication. Right now, I'm at the very start of my research, so I'm
looking for resource information.

1) What are the best WWW locations for DSP information?
(My crawler shows quite a few, but I don't know which ones are useful)

2) Where can I find documentation detailing how a TNC operates?
I know vaguely what is in there, but I really need the details.

Feel free to respond via this thread or by direct email.
Thanks,
Vince

Subject: What does CQ mean?

I had always thought that CQ was "come quick" but it could be an "old wyfe's tail."

The distress prosign was CQD (the D stood for "danger"?)

When the Titanic went down they transmitted CQD, then tried the (then) recently adopted distress signal SOS - proported to be the
first use of SOS.

No, I don't have the references for the above. Just passing it along.

>much out there (my qth is 12 miles from Gatwick airport (in a valley :{)).

Six is becoming popular, but due to the current state of the sunspot
cycle you won't find much beyond local activity except during the

infrequent band openings. *Then* it can get real busy. But if you're going to restrict yourself to one VHF+ band, I'd think seriously about a 70cm or 2m SSB rig before I'd set up for 6m. That's because there are many more operators, and more enhanced propagation modes to explore, on those bands. Your "dx" won't be global in scope (unless you go for EME), but it will be more frequent and more hectic as you chase tropo, aurora, and satellites.

However, if you're patient, a 3 element beam and a 100 watts on 6 meters can give you globe spanning results when the band does open. Meteor scatter also works better here than on 2 meters. In 4 or 5 years when the sunspot cycle comes around, 6 will be open to somewhere in the world almost daily.

Gary

>email - ee95ajm@brunel.ac.uk

Well 6m is good in the summer with sporadic 'e' but e's each day become a bit boring especially after your log fills up with italians and balkan area people. When the DX is around you might need a bit of power to break the pile up.....and when there are no 'e's about it's

as dead as a dodo. Until conditions improve I'd leave it as your main
band.

For my money I'd go for 2m, much more activity especially in the
South, up here in the sticks it's quiet. But you could get a rig such
as an IC251e (around 300UKP) and add an amplifier to take it beyond
the 10 watts it normally gives out. For example, with 70 watts and a
9ele yagi I managed to work down to Reading from Edinburgh last night.
Ok it was a prearranged sked but that appears to be the only way to
get a long distance qso these days.......

Cheers,

Gavin,

Date: (null)
From: (null)

A German group leaves home today for an operation from Christmas Island
as VK9XY until Tuesday the 13th of February. They then go on to the

Cocos-Keeling Islands as plan activity as VK9CR between the 14th and 23rd of February. They will operate CW and SSB on 160 to 6 metres, plus RTTY and satellites.

And from Barbados, VE4GV plans to be active as 8P9EN from Thursday the 8th until the 15th of February on all bands 80 to 10 metres, mostly CW.

Next the Rally News:

The Lancastrian Rally is taking place at the University of Lancaster today, the 4th of February. The doors open at 11.00, or 10.30am for disabled visitors.

Also today, the South Essex Amateur Radio Society Radio Rally is taking place at The Paddocks, Long Road, Canvey Island. The event includes RSGB Morse Tests on demand - candidates are reminded that they will need to take the test fee and two passport-size photographs along. Doors open at 10.30 am.

Next Sunday, the 11th of February, the Northern Cross Rally takes place at the Thornes Park Athletics Stadium on the A642 Horbury Road in Wakefield, which is a new venue for this rally. The event features the usual dealers, a bookstall and bring-and-buy stand, an RSGB Propagation Studies Committee stand and Morse Tests on demand. Please bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at the rally. Talk-in will be provided on 2 metres channel S22 and 70 centimetres channel SU22, and further details can be obtained from G0FLX on 0113 238 3622.

Also on Sunday the 11th, the Cambridge and District Amateur Radio Club Rally takes place at the Ambulance Station at Addenbrookes Hospital. The event features trade stands, a bring and buy stall and car boot sale. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For more details contact John, G0GKP, on 01954 200072.

And now a date for your diary:

The RSGB National VHF Convention takes place at the usual venue - Sandown Park in Surrey - two weeks from today, on Sunday the 18th of February. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show and special interest groups. Full details are in the February edition of Radio Communication.

A new award in memory of Cyril James, G3VVB, and aimed at the home constructor of microwave equipment, will be presented for the first time at the RSGB VHF Convention. If you have an item of home-made microwave equipment and you are proud of the way you've constructed it, then why not bring it along to the Convention and enter it in the competition? The equipment can be constructed from any design, or from a kit - what the judges will be looking for particularly is quality of construction and finish. If you cannot attend the Convention in person, you may send detailed photographs and a written description to Steve Davies, G4KNZ, whose address is correct in the RSGB Call Book.

Now for the HF contest news:

The final session of the RSGB LF Cumulative is on 80 metres today, Sunday the 4th of February, between 16 and 1800 UTC. The rules were published in last September's RadCom, but please note that the dates were given incorrectly in September. The correct dates are shown in the February RadCom.

Next weekend, the RSGB 1.8MHz CW Contest takes place from 2100 UTC on Saturday the 10th until 0100 UTC on Sunday the 11th of February. The rules are in the September RadCom.

And the Dutch PACC Contest takes place on CW and SSB for 24 hours from 1200 UTC on Saturday the 10th. Brief rules are on page 22 of the February RadCom.

Next some VHF contest news:

The 432 MHz RSGB Affiliated Societies and Fixed Station Contest is taking place today, the 4th of February, between 09 and 1500 UTC.

And next Sunday, the 11th of February, the third session out of five in the RSGB 70 MHz Cumulative Contests will take place between 10 and 1200UTC. The rules for all these contests can be found in last September's RadCom.

And now the solar factual data:

The period from the 22nd to the 28th of January saw solar activity at very low levels and the geomagnetic field at quiet levels. Only one small sunspot group remained on the solar disc, and the mean was 7. Solar flux levels increased very slightly from 72 units on the 22nd to 74 units on the 25th. They remained at that level until the 28th and the average was 73 units. No solar flares were reported. Electron fluence declined slightly but remained at a moderate level. X-Ray flux remained at its minimum level of A1.0 every day. The 90-day solar flux average on the 28th was 74 units, the same as last week.

Geomagnetic activity was "quiet", with the levels down to only Ap 3 units on the 25th. The average was Ap 5 units. The aa indices, as supplied by the British Geological Survey for the period from the 16th to the 22nd of January, increased from "unsettled" on the 16th with 15 nanoTeslas recorded, to "active" levels which lasted through to the 20th, when conditions returned to "unsettled". The most disturbed day was the 17th, with 26 nanoTeslas. The average for the period was 20 nanoTeslas, which is just K3.

I'll repeat the figures: spots - 7, flux - 73, Ap index - 5, X-Ray flux - A1.0.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 19th to the 25 of January, improved every day from 5.1MHz on the 19th, to 6.7MHz by the 25th. The average was 6.1MHz.

The darkness hour lows decreased slightly from 2.2MHz on the 19th to 1.9MHz by the 23rd, but then increased to end the period at 2.5MHz. The average was 2.2MHz. The daytime highs took place between 0900 and 1400 hours. The darkness hour lows took place between 0400 and 0600 hours every day. Two short periods of sporadic E took place on the 22nd and the 24th.

I'll repeat the figures: highs - 6.1MHz, lows - 2.2MHz.

And lastly the solar forecast:

This week the quiet side of the sun is expected to rotate into view and later in the week the solar disc could become spotless. Solar flux levels are expected to decline to the high 60s. Geomagnetic activity is expected to be very quiet, but later in the week activity could increase to "active" conditions. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north, but levels could decline towards next weekend. The darkness hour lows are expected to be about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Victor and G7 Whisky Alfa series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Quebec series.

For ROUTINE renewals, you don't use the 610 anymore, Robert. Yes - I
know - it surprised me, too. Mine expires in March. FCC sent me a
simple form many weeks back, which I signed to acknowledge that I
wanted it renewed, and sent it back. They sent the form without being
asked. Nice to have the feds doing something right!

If your address is still good in their files, you probably will get
that form soon. If not you will then REALLY need a 610 to change the
address!

From: Kevin Schmidt <kschmidt@ihnp4.ucsd.edu>
Subject: Requesting contest QSLs [was QSL etiquette]

I have read the "To QSL or not" topics. I personally reply to
all QSLs received. I also find it hard to believe that anyone, who has
time to get on the air, is too busy to write "confirmed by W1ABC", sign
the card they received, and stick it in the supplied SASE. But if
someone wants to toss away all the QSLs and SASEs he receives that's
his right. It is amusing to hear a contester suggest that he expects
operators to ask, during a contest contact, if he will reply to a QSL
request. I can see it now instead of something like this. (BTW, In my

imagination, this is in morse, and op1 is sending 35 words per minute
and op2 is sending 15 wpm.)

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY
op1: tu cq test de w1abc

I now realize that at least one contester wants:

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY and by the way, I really need Maine to finish my WAS
if I send you a card with an sase would you be willing to send
me yours k
op1: r no k
op2: ok 73 w2xyz
op1: cq test de w1abc

This may reduce the qso rate somewhat for op1, but now that I know
what's expected...

From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: <<FREE WWW Ham Radio Classified Page with Search Engine>>

The Raymond Sarrio Company9s Ham Radio WWW site is proud to announce a
FREE Ham Radio classified advertising page at
http://www.csz.com/sarrio.html. This new classified page will allow Hams
to find equipement with the help of a search engine--no need to scroll
through 1009s of listing before you find that special piece of gear. Plus,
when you find the gear you'er interested in, you are also provided with
easy point-and-click e-mail access, directly to the Ham that listed the
item.

For those Hams with gear to sell, take note! there is NO charge to list
your equipment within Ham Classifieds, and there will be no posting time
delays. Your posting(s) will go on-line in our classified search engine
in about 1 hour. All you need do is fill out a simple forms page, and upon its
(point-and-click) submission your 3For Sale2 classified is immediately
on-line.

I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.

Give it a try, and let me know how you like it (we are still beta testing)
739s Ray

Don't count on any sites carrying those alt groups. Here at UH we're
already max'd out at some 10,000 groups.

I guess throwing up a new repeater that duplicate coverage 10-fold isn't
enough to feed one's ego anymore - now one has to resort to creating
alt newsgroups... (Watch that blood pressure!)

Subject: GB2RS News 4th February 1996

Good morning. It's Sunday the 4th of February and here is the GB2RS news
broadcast, prepared by the RSGB and intended for all radio amateurs and
short-wave listeners.

The RSGB responded quickly to reports on radio and TV, and in
newspapers, about the Duke of Edinburgh's phone conversation being taped
by "a radio amateur" or "radio ham". A press release was sent to all
national newspapers and to radio and TV stations stating that "there is
no evidence whatsoever" that the telephone conversation was intercepted
and recorded by a licensed radio amateur. The individual named in the
newspapers as taping the Duke of Edinburgh's phone conversation is not a
member of the RSGB and it is firmly believed that he does not hold an

amateur radio licence. The RSGB press release also pointed out that equipment capable of receiving analogue mobile phones is widely available and may be purchased quite legally by anyone.

The RSGB General Manager, Peter Kirby, G0TWW, was also interviewed by Independent Radio News, Associated Press, Sky TV News, and Channel 1 Cable TV on Tuesday and Wednesday over the matter.

A new 50MHz GB2RS news broadcast serving Central Scotland is starting today, the 4th of February, at 11.30 am. Initially, it will be for an experimental period of three months but will be continued if it proves to be a success. The transmission will be from the station of Tom Menzies, GM1GEQ, and will be on 51.530 MHz with vertical polarisation. Reports will be welcome, and should be sent to GM1GEQ via the RSGB QSL bureau.

The Barnsley and District Amateur Radio Club is co-ordinating a coach trip to Friedrichshafen in June on behalf of the RSGB. The Friedrichshafen 'Hamfest' is Europe's largest amateur radio exhibition. The coach will depart on Wednesday the 26th of June and return on Tuesday the 2nd of July and pick-ups can be arranged at pre-determined locations en route. Places are allocated on a first come, first served basis so contact the organiser, Ernie Bailey, G4LUE, without delay. He is available on 01226 716339, or 0836 748958, between 6.00 and 8.00pm.

There is a new QSL Bureau Sub-Manager for the GM0AAA to LZZ series of callsigns. He is Fred Roe, GM0ALS, and his address is 8 South Gyle Gardens, Edinburgh. The postcode is EH12 7RZ. The address may also be found in the RSGB Call Book under GM0ALS.

The Radio Amateur Invalid and Blind Club Northern Ireland Area is holding a flag day collection in the Ballymena town centre shopping complex on Friday the 9th of February between about 10.00 am and 9.00 pm. Anyone who can help for a few hours should contact David Caldwell, GI0HOW, on 01232 471370, or send a fax to him on 01232 471980, to arrange times and identification permits.

On Saturday the 10th of February, the Lincoln Short Wave Club is celebrating its 75th anniversary. The club was formed as the Lincoln Wireless and Scientific Society in 1921. There will be an exhibition and special event station at the Lawn Complex, Lincoln, from 12 noon until 5.00 pm, with a celebratory dinner in the evening. The day's events will be opened jointly by the Mayor of Lincoln, Councillor Geoff Ellis, and RSGB President Peter Sheppard, G4EJP. For further details of this, or the club's other activities, please contact John Middleton, G8VGF, on 01522 525760.

The annual Guides 'Thinking Day on the Air' takes place over the weekend of the 24th and 25th of February. A pack is available from RSGB HQ consisting of a list of participating special event stations and details of the countries which permit third party Greetings Messages during this event. Groups using a GX or similar prefix instead of a GB call are

asked to contact Mrs Eva Telenius-Lowe at RSGB Headquarters by this Friday, the 9th of February, in order to be included on the list of participating stations. If you would like the pack, please send an A4-size self-addressed envelope, with 38p in stamps, to Eva at RSGB HQ.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

>as a replacement part. Being mechanical, it is the item
>that most often goes on a 720A. So when it goes, so does
>the radio . . .
> Jeff Shelton/KS4TL

Fact is the company who made the relay for ICOM in Japan went out of business several years ago. Before that happened ICOM tried to forcast the requirements for the relay for the next 5 years. Thye used them up in the 9 to 10 years that have passed since that time.

>it!

That's a rather incredible amount of lift for a weather balloon (which of course *isn't* a hot air balloon anyway). I don't know where you're getting your figures, but 350 pounds for 500 feet of #14 is absurd (it's also 75% of the yield limit of the wire, so it wouldn't take much catenary loading from the wind to exceed the limit). 500 feet of bare 14 gauge copper wire only weighs about 6.25 pounds. That's too much load for a 10 foot Wx balloon, of course, but you'd use something a bit thinner, say #22, which would only weigh a pound for 500 feet. It'd break in a 24 MPH gust, though.

And I guarantee that if there is any wind at all, that balloon is going to lay out along the ground instead of standing overhead. With a 10 foot balloon, #22 wire, and a 15 MPH wind, that corresponds to a slant angle of about 84 degrees off zenith. With very light breezes, the balloon may stand as high as 45 degrees off zenith, but it would have to be dead calm for it to approach zenith more closely than that. A lifting body, however, like the advertising blimps, can be set to rise into the wind, and they can approach zenith fairly closely, to better than 30 degrees off zenith. The angle from zenith corresponds to the sum of the tangents of the vector forces at work.

>For some reason everyone is thinking Wagner is stupid. We have talked in >mail about this in the past. I think that he has a good idea, and with a >lot of planing his club will do just fine.

I don't think he's stupid. I just think he doesn't have experience with tethered balloons of this nature, and that he hasn't done the math to see what angle the forces involved will yield. There are three primary force vectors, lift, gravity, and wind loading. Those are tied together by the catenary of the wire to yield the angle of repose for the system. All the data you need is in the CRC Handbook.

If you've got a *lot* of excess lift, you can pull the wire more nearly vertical for a given wind speed, but a lot of lift corresponds to a *large* balloon, and that has a correspondingly large frontal area to present to the wind, so the vectors still lead to a large angle off zenith. The advantage of the lifting bodies is that they can supply lift *without* a corresponding increase in frontal area, so they can reduce the angle from zenith a lot more. Unfortunately, that puts more stress on the tether too, so you have to go to a larger gauge, and that adds weight. It can be a vicious circle.

If he lays out 2,000 to 10,000 feet of wire, he's creating an incredible hazard if it gets away from him. The odds of it all coming down where it'll miss a power line are pretty slim. Though for a Wx balloon to lift that much he's going to have to use #30 or smaller, and it'll just vaporize when it tangles with the power lines (automatic fuse). (And it'll break under it's own weight and wind loading before it reaches full height anyway.)

Now there is another way. If he uses a large (manned) hot air balloon, he can three point tether it with heavy steel cable and just hang the antenna

wire vertically below it. That may be what you're thinking of. He's not going to reach 2,000 to 10,000 feet that way, however. Something on the order of 300 feet might be possible before stresses on the central tether connection to the balloon get out of hand during wind gusts.

(Of course he could use a *huge* tethered blimp, such as TV Marti uses, and reach 10,000 feet, but I doubt he can afford that, Congress is debating whether the US can afford that.)

Yes ... but not without problems.

I posted a WTB in alt.ham-radio.am last week, and it duly appeared.
Since then there've been no other postings in that ng.

I sent the WTB posting again last night and it got bounced back by
my ISP as 'No valid newsgroups specified'

Well goody for you.

Let me put it this way. Many people are never going to use CW. The work
required to learn CW is pointless. Do you enjoy pointless? I think you
should have to learn braille in order to get you license. It makes just
as much sense.

I don't know why I'm jumping in here, the old "I had to do it so you
should have to do it also" is a rather shortsighted attitude. It goes
to show that improvement of ham operators is the least of your worries,
you just worried someone might get the priviledges with less work. On
the other hand... I get the fealing that alot of CW proponents are afraid
that they wouldn't be able to deal with real competance tests. If CW went
away you might actually have to demonstrate theory competance with a
non-gimmee test.

So, is it better to keep numbers down via ancient skills that are unnecessary,
or is it better to force people to develop modern, relevant skills?

As for those that want the CW frequencies, that's fine, those people can
learn morse since it will be relevant to them. I would be all for
maintaining those as pure CW.

William,

The NIR-10 4.0 upgrade should allow you to duplicate ANY 3.0 setting,
since all the original code is still there - just with added features.
I made sure of that when I wrote the upgrade code. If you need a set
of the old v3.0 EPROMs to compare with, give me a call at JPS.

Why not have a techology filter? In fact, why have a filter at all? The answer is alluded to by your next paragraph.

>>Face it, nobody really builds their own radios any more. Look in
>>the ham radio magazines and what do you see? Answer: mega-
>>dollar ham radios. This is the only difference between a ham radio
>>operator and a C.B. radio operator.

>to.

It is that *everybody* used to behave with more decorum, until decorum and politeness gave way to PCism and everybody's right to say whatever they want, whenver they want, dammit!

This is a general societal problem (and ham radio is more or less a microcosm of society). The problem isn't solved by simply having a lid filter. Besides -- no filter is perfect. Remember Murphy's Third Law: Foolproof systems give rise to more clever fools.

>>If this attitude were pervasive, we would have penmanship tests to
>>use a state park, pie eating contests to drive on the public
>>highways and height requirements to run for elected office. The
>>code test is simply no longer relevant to operating a ham radio.
>your analogies are shaky at best.

Maybe, maybe not. It remains to be seen (just ask over in rec.radio.amateur.policy someday) exactly what benefit, if any, continued Morse training has for the Amateur Radio Service.

>The influx of poor operators since the advent of the no-code license is
>staggering. I have never heard so much foul language and obnoxious

>license classes. Anyone who truly wants a ham license will find that
>learning the code at the required snail's pace is no barrier at all...or
>am I overestimating people's abilities?

No, but if you're simply in a mood to create artificial barriers, make them *good* ones. How about jumping out of an empty oil barrel? Or ditch-digging (Gary KE4ZV's favorite)? Let's really make it a good one: each license applicant must successfully lobby the FCC to turn one of our UHF+ allocations into "amateur exclusive".

As for the lack of good operators, there has also been a lack of good elmering, especially by the W#xxx and K#xxx calls from days of old who look down their noses at the new licensees. Some attitude adjustment is called for all around.

QSL has two official usages. "QSL?" means "Do you acknowledge receipt
of my traffic?" "QSL" means "I acknowledge receipt of your traffic."
They are procedural signals intended to be used for *over the air*
message handling, nothing about postal cards or snail mail is implied.

Subject: Using DSP to emulate a TNC

Hey guys/gals/other:

I am trying to use digital signal processing to emulate a TNC for packet
communication. Right now, I'm at the very start of my research, so I'm
looking for resource information.

1) What are the best WWW locations for DSP information?
(My crawler shows quite a few, but I don't know which ones are useful)

2) Where can I find documentation detailing how a TNC operates?
I know vaguely what is in there, but I really need the details.

Feel free to respond via this thread or by direct email.
Thanks,
Vince

Six is becoming popular, but due to the current state of the sunspot cycle you won't find much beyond local activity except during the infrequent band openings. *Then* it can get real busy. But if you're going to restrict yourself to one VHF+ band, I'd think seriously about a 70cm or 2m SSB rig before I'd set up for 6m. That's because there are many more operators, and more enhanced propagation modes to explore, on those bands. Your "dx" won't be global in scope (unless you go for EME), but it will be more frequent and more hectic as you chase tropo, aurora, and satellites.

However, if you're patient, a 3 element beam and a 100 watts on 6 meters can give you globe spanning results when the band does open. Meteor scatter also works better here than on 2 meters. In 4 or 5 years when the sunspot cycle comes around, 6 will be open to somewhere in the world almost daily.

Gary

>email - ee95ajm@brunel.ac.uk

Well 6m is good in the summer with sporadic 'e' but e's each day
become a bit boring especially after your log fills up with italians
and balkan area people. When the DX is around you might need a bit of
power to break the pile up.....and when there are no 'e's about it's
as dead as a dodo. Until conditions improve I'd leave it as your main
band.

For my money I'd go for 2m, much more activity especially in the
South, up here in the sticks it's quiet. But you could get a rig such
as an IC251e (around 300UKP) and add an amplifier to take it beyond
the 10 watts it normally gives out. For example, with 70 watts and a
9ele yagi I managed to work down to Reading from Edinburgh last night.
Ok it was a prearranged sked but that appears to be the only way to
get a long distance qso these days.......

Cheers,

Gavin,

Date: (null)
From: (null)

A German group leaves home today for an operation from Christmas Island as VK9XY until Tuesday the 13th of February. They then go on to the Cocos-Keeling Islands as plan activity as VK9CR between the 14th and 23rd of February. They will operate CW and SSB on 160 to 6 metres, plus RTTY and satellites.

And from Barbados, VE4GV plans to be active as 8P9EN from Thursday the 8th until the 15th of February on all bands 80 to 10 metres, mostly CW.

Next the Rally News:

The Lancastrian Rally is taking place at the University of Lancaster today, the 4th of February. The doors open at 11.00, or 10.30am for disabled visitors.

Also today, the South Essex Amateur Radio Society Radio Rally is taking place at The Paddocks, Long Road, Canvey Island. The event includes RSGB Morse Tests on demand - candidates are reminded that they will need to take the test fee and two passport-size photographs along. Doors open at 10.30 am.

Next Sunday, the 11th of February, the Northern Cross Rally takes place at the Thornes Park Athletics Stadium on the A642 Horbury Road in Wakefield, which is a new venue for this rally. The event features the usual dealers, a bookstall and bring-and-buy stand, an RSGB Propagation Studies Committee stand and Morse Tests on demand. Please bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at the rally. Talk-in will be provided on 2 metres channel S22 and 70 centimetres channel SU22, and further details can be obtained from G0FLX on 0113 238 3622.

Also on Sunday the 11th, the Cambridge and District Amateur Radio Club Rally takes place at the Ambulance Station at Addenbrookes Hospital. The event features trade stands, a bring and buy stall and car boot sale. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For more details contact John, G0GKP, on 01954 200072.

And now a date for your diary:

The RSGB National VHF Convention takes place at the usual venue - Sandown Park in Surrey - two weeks from today, on Sunday the 18th of February. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show and special interest groups. Full details are in the February edition of Radio Communication.

A new award in memory of Cyril James, G3VVB, and aimed at the home constructor of microwave equipment, will be presented for the first time at the RSGB VHF Convention. If you have an item of home-made microwave equipment and you are proud of the way you've constructed it, then why not bring it along to the Convention and enter it in the competition? The equipment can be constructed from any design, or from a kit - what the judges will be looking for particularly is quality of construction and finish. If you cannot attend the Convention in person, you may send detailed photographs and a written description to Steve Davies, G4KNZ, whose address is correct in the RSGB Call Book.

Now for the HF contest news:

The final session of the RSGB LF Cumulative is on 80 metres today, Sunday the 4th of February, between 16 and 1800 UTC. The rules were published in last September's RadCom, but please note that the dates were given incorrectly in September. The correct dates are shown in the February RadCom.

Next weekend, the RSGB 1.8MHz CW Contest takes place from 2100 UTC on Saturday the 10th until 0100 UTC on Sunday the 11th of February. The rules are in the September RadCom.

And the Dutch PACC Contest takes place on CW and SSB for 24 hours from 1200 UTC on Saturday the 10th. Brief rules are on page 22 of the February RadCom.

Next some VHF contest news:

The 432 MHz RSGB Affiliated Societies and Fixed Station Contest is taking place today, the 4th of February, between 09 and 1500 UTC.

And next Sunday, the 11th of February, the third session out of five in the RSGB 70 MHz Cumulative Contests will take place between 10 and 1200UTC. The rules for all these contests can be found in last September's RadCom.

And now the solar factual data:

The period from the 22nd to the 28th of January saw solar activity at very low levels and the geomagnetic field at quiet levels. Only one small sunspot group remained on the solar disc, and the mean was 7. Solar flux levels increased very slightly from 72 units on the 22nd to 74 units on the 25th. They remained at that level until the 28th and the average was 73 units. No solar flares were reported. Electron fluence declined slightly but remained at a moderate level. X-Ray flux remained at its minimum level of A1.0 every day. The 90-day solar flux average on the 28th was 74 units, the same as last week.

Geomagnetic activity was "quiet", with the levels down to only Ap 3 units on the 25th. The average was Ap 5 units. The aa indices, as supplied by the British Geological Survey for the period from the 16th to the 22nd of January, increased from "unsettled" on the 16th with 15 nanoTeslas recorded, to "active" levels which lasted through to the

20th, when conditions returned to "unsettled". The most disturbed day was the 17th, with 26 nanoTeslas. The average for the period was 20 nanoTeslas, which is just K3.

I'll repeat the figures: spots - 7, flux - 73, Ap index - 5, X-Ray flux - A1.0.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 19th to the 25 of January, improved every day from 5.1MHz on the 19th, to 6.7MHz by the 25th. The average was 6.1MHz. The darkness hour lows decreased slightly from 2.2MHz on the 19th to 1.9MHz by the 23rd, but then increased to end the period at 2.5MHz. The average was 2.2MHz. The daytime highs took place between 0900 and 1400 hours. The darkness hour lows took place between 0400 and 0600 hours every day. Two short periods of sporadic E took place on the 22nd and the 24th.

I'll repeat the figures: highs - 6.1MHz, lows - 2.2MHz.

And lastly the solar forecast:

This week the quiet side of the sun is expected to rotate into view and later in the week the solar disc could become spotless. Solar flux levels are expected to decline to the high 60s. Geomagnetic activity is expected to be very quiet, but later in the week activity could increase to "active" conditions. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north, but levels could decline towards next weekend. The darkness hour lows are expected to be about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Victor and G7 Whisky Alfa series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Quebec series.

1880. State-side 10m repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-03 00:00:00 UTC
From: "Dr. Malcolm A. Williamson" <mitch1@pncl.co.uk>
Message-ID: <4evhvd$aej@eiger.pncl.co.uk>
Source record: 231217

Can anyone tell the input/output frequencies for the American 10m repeaters please.

Many thanks

Dr. Malcolm A. Williamson (Ph.D) Gï¿½EGA

1881. Re: QSLs & contesters [was QSL etiqutte]

>: (I understand the special circumstances of DX stations, I'm
>: just asking about US contesters here.)

I've enjoyed DXing and contesting from in and outside the US and have always responded to all QSL requests with or without SASE.
Ninety-Nine percent of the time I return SASEs and money included with QSL requests.

I disagree with the recent "QSL etiquette" item in the Feb issue of QST. In my opinion, if the cost of QSLing is a problem for you then:

a. You should of made it clear during the contacts that an SASE (or whatever) is required for confirmation.

b. Inform the other operator that you don't QSL.

c. Simply do not make more QSOs (particularly /125 "special event" which have a higher probability of being wanted) than you feel you can afford.

I received 450+ cards via the bureau last week from the US and 50+ cards from Japan. Most of the cards are for contest QSOs. I have nearly finished filling out return QSLs for all contacts and expect to have them posted in the mail within a week or two. NO SASE, IRCs, or MONEY required!

Happy Contesting/DXing.

1884. Alaskan Counties

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-03 00:00:00 UTC
From: jamesm@sw2.canberra.edu.au
Message-ID: <4evira$rtr@csc.canberra.edu.au>
Source record: 231221

I'm working on the USA County Award and need some help
with the Alaskan counties. The county hunters book I have lists
the counties as 1st District, 2nd District, 3rd District, and 4th
District. However, my Funk & Wagnalls Hammond World
Atlas lists the four areas as Northeastern, Central, South Central,
and Southeastern.

Out of all the KL7 QSLs I've received only one has the county
printed on it....so I'm pretty sure 3rd district = South Central.

Any help would be appreciated.

I just checked the 1996 Callbook CD-ROM. It says that there are 237,869
Techs and 40,559 Tech plus (34.39 and 5.86 percent respectively of the
total # of licensees). Remember when interpreting this, however, that
the FCC did not distinguish between Tech and Tech plus for the first year
or more after the no-code licensing program began, and that there were a
large number of "old" techs before no-code licensing, and that all of those
people are lumped into the tech category as indicated here. In any case,
the combined total is only 40% of total licensees, not over half as some
have asserted in this discussion. FWIW.....73 - Alan NS0B

>radio for its time, but not something I'd want to put back on the air
>today.

Hi all!

I have also owned the Clegg FM-27B and reflect the same problems with
its spurious output. I also had severe intermod and overload promlems
on receive, as well. It was a novelty radio to own, though, in a day
when most radios were crystal controlled and had only 6 to 12 channels.
If I remember correctly, the Clegg also was one of the few that put
out a full 25 watts in a day when 10 watts was the norm for most rigs.

As far as the Regency, I have never owned an HR-2, but I still own an
HR-6, 6 meter rig. Those radios have the most un-stable transmitter I
have ever seen. You can keep the spurs down if you tune the transmitter
on the frequency you intend to use most, into the antenna you will be
using. Don't change frequencies, though, because you will throw spurs
all over the band!

I operate on 52.525 Mhz with this radio, and if my mobile antenna gets
wet, causing the SWR to rise, The transmitter goes nuts and I start to
bring up a repeater that has its input on 51.80, almost 2 miles away!
Now thats a sloppy transmitter!!!

I would like to see more stories relating to the classic radios going back
to the days when repeaters were just becoming popular----back in the
days when you were lucky to have 10 watts, a Ringo, and 6 channels.
It would be much better reading than all of the mud that is being slung
back and forth on this newsgroup!

Hmmm, well in rec.radio, maybe that works. But I'm not sure that'll make
a good battle-flag here in a.s.d! Besides, some of us have developed a
bizarre fondness for Burt. (Hey, I read Dilbert, too!) Years ago I used
to have a pet black rat snake I was sorta fond of, too. He smelled funny,
but he was great for getting rid of dead mice...

And aside from some of the personal attack flame-wars, *some* of Burt's
inanities stimulate thought and replies, which isn't always a terrible
thing.

>TIA 73s
==========
For ROUTINE renewals, you don't use the 610 anymore, Robert. Yes - I
know - it surprised me, too. Mine expires in March. FCC sent me a
simple form many weeks back, which I signed to acknowledge that I
wanted it renewed, and sent it back. They sent the form without being
asked. Nice to have the feds doing something right!

If your address is still good in their files, you probably will get
that form soon. If not you will then REALLY need a 610 to change the
address!

From: Kevin Schmidt <kschmidt@ihnp4.ucsd.edu>
Subject: Requesting contest QSLs [was QSL etiquette]

I have read the "To QSL or not" topics. I personally reply to
all QSLs received. I also find it hard to believe that anyone, who has
time to get on the air, is too busy to write "confirmed by W1ABC", sign
the card they received, and stick it in the supplied SASE. But if
someone wants to toss away all the QSLs and SASEs he receives that's
his right. It is amusing to hear a contester suggest that he expects
operators to ask, during a contest contact, if he will reply to a QSL
request. I can see it now instead of something like this. (BTW, In my
imagination, this is in morse, and op1 is sending 35 words per minute
and op2 is sending 15 wpm.)

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY
op1: tu cq test de w1abc

I now realize that at least one contester wants:

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY and by the way, I really need Maine to finish my WAS
if I send you a card with an sase would you be willing to send
me yours k
op1: r no k
op2: ok 73 w2xyz
op1: cq test de w1abc

This may reduce the qso rate somewhat for op1, but now that I know
what's expected...

From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: <<FREE WWW Ham Radio Classified Page with Search Engine>>

The Raymond Sarrio Company9s Ham Radio WWW site is proud to announce a
FREE Ham Radio classified advertising page at
http://www.csz.com/sarrio.html. This new classified page will allow Hams
to find equipement with the help of a search engine--no need to scroll
through 1009s of listing before you find that special piece of gear. Plus,
when you find the gear you'er interested in, you are also provided with
easy point-and-click e-mail access, directly to the Ham that listed the
item.

For those Hams with gear to sell, take note! there is NO charge to list
your equipment within Ham Classifieds, and there will be no posting time
delays. Your posting(s) will go on-line in our classified search engine
in about 1 hour. All you need do is fill out a simple forms page, and upon its
(point-and-click) submission your 3For Sale2 classified is immediately
on-line.

I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.

Give it a try, and let me know how you like it (we are still beta testing)
739s Ray

Don't count on any sites carrying those alt groups. Here at UH we're
already max'd out at some 10,000 groups.

I guess throwing up a new repeater that duplicate coverage 10-fold isn't
enough to feed one's ego anymore - now one has to resort to creating
alt newsgroups... (Watch that blood pressure!)

From: David Hough <dave@llondel.demon.co.uk>
Subject: GB2RS News 4th February 1996

Good morning. It's Sunday the 4th of February and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The RSGB responded quickly to reports on radio and TV, and in newspapers, about the Duke of Edinburgh's phone conversation being taped by "a radio amateur" or "radio ham". A press release was sent to all national newspapers and to radio and TV stations stating that "there is no evidence whatsoever" that the telephone conversation was intercepted and recorded by a licensed radio amateur. The individual named in the newspapers as taping the Duke of Edinburgh's phone conversation is not a member of the RSGB and it is firmly believed that he does not hold an amateur radio licence. The RSGB press release also pointed out that equipment capable of receiving analogue mobile phones is widely available and may be purchased quite legally by anyone.

The RSGB General Manager, Peter Kirby, G0TWW, was also interviewed by Independent Radio News, Associated Press, Sky TV News, and Channel 1 Cable TV on Tuesday and Wednesday over the matter.

A new 50MHz GB2RS news broadcast serving Central Scotland is starting today, the 4th of February, at 11.30 am. Initially, it will be for an experimental period of three months but will be continued if it proves to be a success. The transmission will be from the station of Tom Menzies, GM1GEQ, and will be on 51.530 MHz with vertical polarisation. Reports will be welcome, and should be sent to GM1GEQ via the RSGB QSL bureau.

The Barnsley and District Amateur Radio Club is co-ordinating a coach trip to Friedrichshafen in June on behalf of the RSGB. The Friedrichshafen 'Hamfest' is Europe's largest amateur radio exhibition. The coach will depart on Wednesday the 26th of June and return on Tuesday the 2nd of July and pick-ups can be arranged at pre-determined locations en route. Places are allocated on a first come, first served basis so contact the organiser, Ernie Bailey, G4LUE, without delay. He is available on 01226 716339, or 0836 748958, between 6.00 and 8.00pm.

There is a new QSL Bureau Sub-Manager for the GM0AAA to LZZ series of callsigns. He is Fred Roe, GM0ALS, and his address is 8 South Gyle Gardens, Edinburgh. The postcode is EH12 7RZ. The address may also be found in the RSGB Call Book under GM0ALS.

The Radio Amateur Invalid and Blind Club Northern Ireland Area is holding a flag day collection in the Ballymena town centre shopping complex on Friday the 9th of February between about 10.00 am and 9.00 pm. Anyone who can help for a few hours should contact David Caldwell, GI0HOW, on 01232 471370, or send a fax to him on 01232 471980, to arrange times and identification permits.

On Saturday the 10th of February, the Lincoln Short Wave Club is celebrating its 75th anniversary. The club was formed as the Lincoln Wireless and Scientific Society in 1921. There will be an exhibition and special event station at the Lawn Complex, Lincoln, from 12 noon until 5.00 pm, with a celebratory dinner in the evening. The day's events will be opened jointly by the Mayor of Lincoln, Councillor Geoff Ellis, and RSGB President Peter Sheppard, G4EJP. For further details of this, or the club's other activities, please contact John Middleton, G8VGF, on 01522 525760.

The annual Guides 'Thinking Day on the Air' takes place over the weekend of the 24th and 25th of February. A pack is available from RSGB HQ consisting of a list of participating special event stations and details of the countries which permit third party Greetings Messages during this event. Groups using a GX or similar prefix instead of a GB call are asked to contact Mrs Eva Telenius-Lowe at RSGB Headquarters by this Friday, the 9th of February, in order to be included on the list of participating stations. If you would like the pack, please send an A4-size self-addressed envelope, with 38p in stamps, to Eva at RSGB HQ.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

Fact is the company who made the relay for ICOM in Japan went out of business several years ago. Before that happened ICOM tried to forcast the requirements for the relay for the next 5 years. Thye used them up in the 9 to 10 years that have passed since that time.

>5000 lbs of lift required. As you can see, hot air is not going to cut
>it!

That's a rather incredible amount of lift for a weather balloon (which
of course *isn't* a hot air balloon anyway). I don't know where you're
getting your figures, but 350 pounds for 500 feet of #14 is absurd (it's
also 75% of the yield limit of the wire, so it wouldn't take much catenary
loading from the wind to exceed the limit). 500 feet of bare 14 gauge copper
wire only weighs about 6.25 pounds. That's too much load for a 10 foot Wx
balloon, of course, but you'd use something a bit thinner, say #22, which
would only weigh a pound for 500 feet. It'd break in a 24 MPH gust, though.

And I guarantee that if there is any wind at all, that balloon is going
to lay out along the ground instead of standing overhead. With a 10 foot
balloon, #22 wire, and a 15 MPH wind, that corresponds to a slant angle
of about 84 degrees off zenith. With very light breezes, the balloon may
stand as high as 45 degrees off zenith, but it would have to be dead calm
for it to approach zenith more closely than that. A lifting body, however,
like the advertising blimps, can be set to rise into the wind, and they can
approach zenith fairly closely, to better than 30 degrees off zenith. The
angle from zenith corresponds to the sum of the tangents of the vector
forces at work.

>For some reason everyone is thinking Wagner is stupid. We have talked in
>mail about this in the past. I think that he has a good idea, and with a
>lot of planing his club will do just fine.

I don't think he's stupid. I just think he doesn't have experience
with tethered balloons of this nature, and that he hasn't done the
math to see what angle the forces involved will yield. There are
three primary force vectors, lift, gravity, and wind loading. Those
are tied together by the catenary of the wire to yield the angle of
repose for the system. All the data you need is in the CRC Handbook.

If you've got a *lot* of excess lift, you can pull the wire more nearly vertical for a given wind speed, but a lot of lift corresponds to a *large* balloon, and that has a correspondingly large frontal area to present to the wind, so the vectors still lead to a large angle off zenith. The advantage of the lifting bodies is that they can supply lift *without* a corresponding increase in frontal area, so they can reduce the angle from zenith a lot more. Unfortunately, that puts more stress on the tether too, so you have to go to a larger gauge, and that adds weight. It can be a vicious circle.

If he lays out 2,000 to 10,000 feet of wire, he's creating an incredible hazard if it gets away from him. The odds of it all coming down where it'll miss a power line are pretty slim. Though for a Wx balloon to lift that much he's going to have to use #30 or smaller, and it'll just vaporize when it tangles with the power lines (automatic fuse). (And it'll break under it's own weight and wind loading before it reaches full height anyway.)

Now there is another way. If he uses a large (manned) hot air balloon, he can three point tether it with heavy steel cable and just hang the antenna wire vertically below it. That may be what you're thinking of. He's not going to reach 2,000 to 10,000 feet that way, however. Something on the order of 300 feet might be possible before stresses on the central tether connection to the balloon get out of hand during wind gusts.

(Of course he could use a *huge* tethered blimp, such as TV Marti uses, and reach 10,000 feet, but I doubt he can afford that, Congress is debating whether the US can afford that.)

Yes ... but not without problems.

I posted a WTB in alt.ham-radio.am last week, and it duly appeared. Since then there've been no other postings in that ng.

I sent the WTB posting again last night and it got bounced back by my ISP as 'No valid newsgroups specified'

Well goody for you.

Let me put it this way. Many people are never going to use CW. The work required to learn CW is pointless. Do you enjoy pointless? I think you should have to learn braille in order to get you license. It makes just as much sense.

I don't know why I'm jumping in here, the old "I had to do it so you should have to do it also" is a rather shortsighted attitude. It goes to show that improvement of ham operators is the least of your worries, you just worried someone might get the priviledges with less work. On the other hand... I get the fealing that alot of CW proponents are afraid that they wouldn't be able to deal with real competance tests. If CW went away you might actually have to demonstrate theory competance with a non-gimmee test.

So, is it better to keep numbers down via ancient skills that are unnecessary, or is it better to force people to develop modern, relevant skills?

As for those that want the CW frequencies, that's fine, those people can learn morse since it will be relevant to them. I would be all for maintaining those as pure CW.

Roger

William,

The NIR-10 4.0 upgrade should allow you to duplicate ANY 3.0 setting,
since all the original code is still there - just with added features.
I made sure of that when I wrote the upgrade code. If you need a set
of the old v3.0 EPROMs to compare with, give me a call at JPS.

Why not have a techology filter? In fact, why have a filter at all? The
answer is alluded to by your next paragraph.

>>Face it, nobody really builds their own radios any more. Look in
>>the ham radio magazines and what do you see? Answer: mega-
>>dollar ham radios. This is the only difference between a ham radio
>>operator and a C.B. radio operator.

It is that *everybody* used to behave with more decorum, until decorum and
politeness gave way to PCism and everybody's right to say whatever they
want, whenver they want, dammit!

This is a general societal problem (and ham radio is more or less a
microcosm of society). The problem isn't solved by simply having a lid
filter. Besides -- no filter is perfect. Remember Murphy's Third Law:
Foolproof systems give rise to more clever fools.

>>If this attitude were pervasive, we would have penmanship tests to
>>use a state park, pie eating contests to drive on the public
>>highways and height requirements to run for elected office. The
>>code test is simply no longer relevant to operating a ham radio.
>your analogies are shaky at best.

Maybe, maybe not. It remains to be seen (just ask over in
rec.radio.amateur.policy someday) exactly what benefit, if any, continued
Morse training has for the Amateur Radio Service.

>The influx of poor operators since the advent of the no-code license is

>license classes. Anyone who truly wants a ham license will find that
>learning the code at the required snail's pace is no barrier at all...or
>am I overestimating people's abilities?

No, but if you're simply in a mood to create artificial barriers, make them
good ones. How about jumping out of an empty oil barrel? Or ditch-digging
(Gary KE4ZV's favorite)? Let's really make it a good one: each license
applicant must successfully lobby the FCC to turn one of our UHF+
allocations into "amateur exclusive".

As for the lack of good operators, there has also been a lack of good
elmering, especially by the W#xxx and K#xxx calls from days of old who look
down their noses at the new licensees. Some attitude adjustment is called
for all around.

>contact with you via radio"

QSL has two official usages. "QSL?" means "Do you acknowledge receipt
of my traffic?" "QSL" means "I acknowledge receipt of your traffic."
They are procedural signals intended to be used for *over the air*
message handling, nothing about postal cards or snail mail is implied.

Subject: Using DSP to emulate a TNC

Hey guys/gals/other:

I am trying to use digital signal processing to emulate a TNC for packet communication. Right now, I'm at the very start of my research, so I'm looking for resource information.

1) What are the best WWW locations for DSP information?
(My crawler shows quite a few, but I don't know which ones are useful)

2) Where can I find documentation detailing how a TNC operates?
I know vaguely what is in there, but I really need the details.

Feel free to respond via this thread or by direct email.
Thanks,
Vince

Subject: What does CQ mean?

I had always thought that CQ was "come quick" but it could be an "old wyfe's tail."

The distress prosign was CQD (the D stood for "danger"?)

When the Titanic went down they transmitted CQD, then tried the (then) recently adopted distress signal SOS - proported to be the
first use of SOS.

No, I don't have the references for the above. Just passing it along.

Six is becoming popular, but due to the current state of the sunspot cycle you won't find much beyond local activity except during the infrequent band openings. *Then* it can get real busy. But if you're going to restrict yourself to one VHF+ band, I'd think seriously about a 70cm or 2m SSB rig before I'd set up for 6m. That's because there are many more operators, and more enhanced propagation modes to explore, on those bands. Your "dx" won't be global in scope (unless you go for EME), but it will be more frequent and more hectic as you chase tropo, aurora, and satellites.

However, if you're patient, a 3 element beam and a 100 watts on 6 meters can give you globe spanning results when the band does open. Meteor scatter also works better here than on 2 meters. In 4 or 5 years when the sunspot cycle comes around, 6 will be open to somewhere in the world almost daily.

Gary

>email - ee95ajm@brunel.ac.uk

Well 6m is good in the summer with sporadic 'e' but e's each day
become a bit boring especially after your log fills up with italians
and balkan area people. When the DX is around you might need a bit of
power to break the pile up.....and when there are no 'e's about it's
as dead as a dodo. Until conditions improve I'd leave it as your main
band.

For my money I'd go for 2m, much more activity especially in the
South, up here in the sticks it's quiet. But you could get a rig such
as an IC251e (around 300UKP) and add an amplifier to take it beyond
the 10 watts it normally gives out. For example, with 70 watts and a
9ele yagi I managed to work down to Reading from Edinburgh last night.
Ok it was a prearranged sked but that appears to be the only way to
get a long distance qso these days.......

Cheers,

Gavin,

A German group leaves home today for an operation from Christmas Island as VK9XY until Tuesday the 13th of February. They then go on to the Cocos-Keeling Islands as plan activity as VK9CR between the 14th and 23rd of February. They will operate CW and SSB on 160 to 6 metres, plus RTTY and satellites.

And from Barbados, VE4GV plans to be active as 8P9EN from Thursday the 8th until the 15th of February on all bands 80 to 10 metres, mostly CW.

Next the Rally News:

The Lancastrian Rally is taking place at the University of Lancaster today, the 4th of February. The doors open at 11.00, or 10.30am for disabled visitors.

Also today, the South Essex Amateur Radio Society Radio Rally is taking place at The Paddocks, Long Road, Canvey Island. The event includes RSGB Morse Tests on demand - candidates are reminded that they will need to take the test fee and two passport-size photographs along. Doors open at 10.30 am.

Next Sunday, the 11th of February, the Northern Cross Rally takes place at the Thornes Park Athletics Stadium on the A642 Horbury Road in Wakefield, which is a new venue for this rally. The event features the usual dealers, a bookstall and bring-and-buy stand, an RSGB Propagation Studies Committee stand and Morse Tests on demand. Please bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at the rally. Talk-in will be provided on 2

metres channel S22 and 70 centimetres channel SU22, and further details can be obtained from G0FLX on 0113 238 3622.

Also on Sunday the 11th, the Cambridge and District Amateur Radio Club Rally takes place at the Ambulance Station at Addenbrookes Hospital. The event features trade stands, a bring and buy stall and car boot sale. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For more details contact John, G0GKP, on 01954 200072.

And now a date for your diary:

The RSGB National VHF Convention takes place at the usual venue - Sandown Park in Surrey - two weeks from today, on Sunday the 18th of February. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show and special interest groups. Full details are in the February edition of Radio Communication.

A new award in memory of Cyril James, G3VVB, and aimed at the home constructor of microwave equipment, will be presented for the first time at the RSGB VHF Convention. If you have an item of home-made microwave equipment and you are proud of the way you've constructed it, then why not bring it along to the Convention and enter it in the competition? The equipment can be constructed from any design, or from a kit - what the judges will be looking for particularly is quality of construction and finish. If you cannot attend the Convention in person, you may send detailed photographs and a written description to Steve Davies, G4KNZ, whose address is correct in the RSGB Call Book.

Now for the HF contest news:

The final session of the RSGB LF Cumulative is on 80 metres today, Sunday the 4th of February, between 16 and 1800 UTC. The rules were published in last September's RadCom, but please note that the dates were given incorrectly in September. The correct dates are shown in the February RadCom.

Next weekend, the RSGB 1.8MHz CW Contest takes place from 2100 UTC on Saturday the 10th until 0100 UTC on Sunday the 11th of February. The rules are in the September RadCom.

And the Dutch PACC Contest takes place on CW and SSB for 24 hours from 1200 UTC on Saturday the 10th. Brief rules are on page 22 of the February RadCom.

Next some VHF contest news:

The 432 MHz RSGB Affiliated Societies and Fixed Station Contest is taking place today, the 4th of February, between 09 and 1500 UTC.

And next Sunday, the 11th of February, the third session out of five in the RSGB 70 MHz Cumulative Contests will take place between 10 and 1200UTC. The rules for all these contests can be found in last September's RadCom.

And now the solar factual data:

The period from the 22nd to the 28th of January saw solar activity at very low levels and the geomagnetic field at quiet levels. Only one small sunspot group remained on the solar disc, and the mean was 7. Solar flux levels increased very slightly from 72 units on the 22nd to 74 units on the 25th. They remained at that level until the 28th and the average was 73 units. No solar flares were reported. Electron fluence declined slightly but remained at a moderate level. X-Ray flux remained at its minimum level of A1.0 every day. The 90-day solar flux average on the 28th was 74 units, the same as last week.

Geomagnetic activity was "quiet", with the levels down to only Ap 3 units on the 25th. The average was Ap 5 units. The aa indices, as supplied by the British Geological Survey for the period from the 16th to the 22nd of January, increased from "unsettled" on the 16th with 15 nanoTeslas recorded, to "active" levels which lasted through to the 20th, when conditions returned to "unsettled". The most disturbed day was the 17th, with 26 nanoTeslas. The average for the period was 20 nanoTeslas, which is just K3.

I'll repeat the figures: spots - 7, flux - 73, Ap index - 5, X-Ray flux - A1.0.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 19th to the 25 of January, improved every day from 5.1MHz on the 19th, to 6.7MHz by the 25th. The average was 6.1MHz. The darkness hour lows decreased slightly from 2.2MHz on the 19th to 1.9MHz by the 23rd, but then increased to end the period at 2.5MHz. The average was 2.2MHz. The daytime highs took place between 0900 and 1400 hours. The darkness hour lows took place between 0400 and 0600 hours every day. Two short periods of sporadic E took place on the 22nd and the 24th.

I'll repeat the figures: highs - 6.1MHz, lows - 2.2MHz.

And lastly the solar forecast:

This week the quiet side of the sun is expected to rotate into view and later in the week the solar disc could become spotless. Solar flux levels are expected to decline to the high 60s. Geomagnetic activity is expected to be very quiet, but later in the week activity could increase to "active" conditions. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north, but levels could decline towards next weekend. The darkness hour lows are expected to be about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Victor and G7 Whisky Alfa series, and Novice calls in the 2 0 Alfa

November and 2 1 Echo Quebec series.

Motu Iti (motuiti@aol.com) wrote:
: Just trying to get a handle on Call letters; I remember when it was only
: 'W2" etc. As they ran out of single digits, there came "WA2, WB2" and WN2
: for novice grade etc. Now-a days, I don't know what is going on.
: Some questions:
: 1) Are call letters still being issued by numerical region "2" being NY
: etc?
Yes, the number regions haven't changed.

: 2) Does the FCC fill in with old call letters (W2, WA2) as they expire?
No, they're currently(*) not reissueing calls.

: 3) Can you tell the license grade by the letters?
Not really, I know many N0xxx calls that belong to extras who got the calls
as generals or techs. I even know of some novice calls like Kx0xxx that
are held by extras. Extras are getting Ax#xx calls, advanced are getting
Kx#xx. They print a table in QST that has the latest issued calls for
the U.S. and territories.
You are not required to change calls when you upgrade.

: 4) What is the recent chronology of call signs since the WB2 issue?
In 2 land, extras are at AA2Zx's, adv at KG2Ex's, gens, techs and novices
are at KB2Wxx. All N2xxx calls have been issued. I think the FCC stopped
issueing W's at the WD#xxx level (not sure, haven't heard any WE#xxx or
WF#XXX's) (in Hawaii, Alaska, the Virgin Is and Puerto Rico they're still
issueing 2x3 W calls to novices, gens and techs and the Virgin Islands
still have some 2x1 W's, latest is WP2x's).

* - The 'vanity call' system is about to start, where you'll be able to
get those expired calls. They're letting relatives have the first chances,
so I could get my grandfather's old call, then extras, etc on down the
line. It costs extra to get a vanity call.

You should read QST. It's now available at newsstands.

The following is late news about Amateur Radio for Radio Amateurs
as prepared from NEWSLINE RADIO scripts by the staff of the AMATEUR
RADIO NEWSLINE, INC. -- formerly the WESTLINK RADIO NETWORK. Amateur
Radio Newsline is a audio news service distributed via telephone.

This hardcopy version is produced by Dale Cary - WD0AKO from
scripts
provided to him weekly by Newsline. It is then distributed to on-line
services, bbs networks and internet user jointly by Dale Cary and
Steve Coletti.

Editorial comments, news item and all other business should be
directed to:

Bill Pasternak, WA6ITF
Newsline Producer & Editor

Internet E-mail: 3241437@mcimail.com
MCI E-mail: WESTRADIO
Phone: (805) 296-7180
Fax: (805) 296-7180
(Fax senders wait for voice prompt.)

Hardcopy comments or complements can be directed to:

The following is a QST
==========

The United States Supreme Court says that broadcasters have a legal

responsibility to censor indecent material and this could mean problems for foul mouth hams. Find out how on Newsline report number 964 coming your way right now!

(*****
SUPREME COURT UPHOLDS INDECENCY LAW

The United States Supreme court has said that restricting the hours

when legally indecent speech can be broadcast is constitutionally valid. This finding could pave the way for the FCC and other government agencies to prosecute hams who use this kind of language on the air.
In rebuffing free-speech advocates, the Supreme Court on January 8th
has told federal regulators that it is constitutionally valid for them to confine television and radio programs containing legally indecent language to late-night hours when children are less likely to tune in. The justices also let stand a federal appeals court ruling that upheld government limits on indecent broadcasts to the hours between 10 PM and 6 AM.
The news media and civil liberties groups had challenged the rule as
a violation of the right to free-speech. The appeals court had ruled last summer that the rule was justified by the government's overriding and compelling interest in protecting the nations children.
Since 1987, the FCC has deemed as indecent all explicit references to such things having a prurient meaning. Unlike obscenity, indecency is protected by the First Amendment's free-speech guarantee.
The high court's action, taken without comment, quite literally opens the door to prosecuting almost anyone who transmits legally indecent language during hours when young children may be listening in. This could even include transmissions made by ham radio operators if the FCC so decides to invoke the rule.
The FCC has long held that a violation in any one service is no different that a violation in any other. For the FCC, this Supreme Court decision could be what it has been waiting for so that they can at least remove the most egregious offenders from the air. The only question is, will they act?

(*****
ARRL BOARD MEETS

The ARRL board of directors met in Savannah, Georgia on January 19th
and 20th and took some rather interesting actions that will affect most United States hams. Perhaps the most far reaching was the decision to appointment of a committee to draft ARRL policy positions on questions to be addressed at the 1999 World Radiocommunications Conference. Issues to be studied include, possible simplification of the licensing structure, agreement on licensing standards internationally, and consideration of article S-25 of the international radio regulations. These are the technical and operational rules governing the amateur and amateur-satellite services, including but not limited to the high frequency code requirement. Membership input will be sought on all issues.

Not much movement on the creation of a single point of contact for the repeater coordination community. The ad hoc repeater coordination committee says that it will continue dialogue with the repeater coordinators' drafting committee and other interested parties, and report to the board at its next meeting any recommendations for regulatory changes and suggestions for improvement of the coordination process.
A number of awards were announced. First, amateur radio emergency service members from Oklahoma were awarded the ARRL Certificate of Merit. This, for their courageous efforts in providing critical emergency communication services to agencies responding to the Oklahoma City bombing. David, VP2EHF and Dorothea, VP2EE Mann, won the International Humanitarian Award for 1995 for hurricane relief efforts and the board awarded Frank Bauer, KA3HDO, the ARRL National Certificate of Merit for his outstanding volunteer service as a member of the SAREX Working Group.
A new procedure for the reporting of advisory committee recommendations was adopted. A committee will be assigned to review the DXCC program and make necessary recommendations in order to encourage broader participation, make the program more equitable, create better understood criteria for DXCC "countries", improve the process of reviewing requests for additions and deletions to the ARRL DXCC list and increase efficiency in the administration of the program.
And speaking about new countries. DX'ers listen up. Scarborough Reef was approved as a new DXCC country.
Finally, the board will experiment with a new system of standing committee and board meetings during 1996. Committee meetings will be held in July and October, in conjunction with an expanded series of meetings of the full board. The consolidated meetings are expected to save the ARRL and its membership considerable amounts of time and money.
Look for full details of the board meeting in the March issue of QST
Magazine.

(*****
SAT SALE

The Federal Communications Commission has finally adopted rules governing the auction of the last remaining satellite slot for beaming television programs nationwide. The rules bar companies from bidding that already hold one of the three lucrative sets of orbital slots.

(*****
ARIG MEETING

The first meeting in a year of the Amateur Radio Industry Group is tentatively slated for Friday evening, February 2nd in conjunction with the 1995 Miami Tropical Hamboree. For further information please contact the groups acting chairman John Dorr, K1AR, at CQ Magazine, 76

North Broadway, Hicksville, New York.
Also scheduled to meet at the Tropical Hamboree will be the first meeting of the newly formed Young Ham of the Year steering committee. It will be held at the convention site on Saturday February 3rd.

(*****
ORD TRAVEL STATION

WB9YBM reports from Chicago that a radio station that recently came

on the air locally is on 870 KHz, transmitting travelers' information from O'Hare Airport. Because of nearby stations, it's hard to hear it outside airport grounds, But with night time propagation AM band DXers might like to listen for it.

(*****
11 METER CB ON THE WWW

The unprecedented comeback of interest in 11 meter Class D Citizens

Band radio has now reached the Internet. Bob Bellville reports that CB Radio Resources has taken to the World Wide Web with a home page located at the Universal Resource Locator

http://www.ultranet.com/~bellvill/cb.html

(*****
RECENT PIRATE CALL SIGNS

KG0EI reports via packet radio on several pirated call signs he has

spotted in recent days. KG0EI says that over 22% of the calls that he worked in the recent SSB Sweepstakes either have no address which matches the State given, are not available in callbook or listed in most recent Buckmaster CD Rom. Add the Pirates to this list and it makes life interesting.

(*****
"BEST FIST" NOMINATIONS DUE

AMSAT North America says that it has already received a number of "Best Fist" nominations from the 24th annual Straight Key Night on OSCAR, held 1 January 1996. If you participated and haven't yet nominated someone you worked for "Best Fist" honors, please take a moment to do so now.
Nominations should be addressed via Internet, to:

w2rs@amsat.org

or

via U.S. mail to W2RS at his callbook address.

(*****
SAT GATEWAY BACK

The WD4ASW Satellite Gateway Node is back in operation after installation of a new hard drive and transfer of program files from the defective drive. Due to problems in transfer, no attempt was made to save messages prior to the shutdown.
The Satellite Gateway Node was featured in the premier issue of CQ/VHF Magazine. Unfortunately, Mr. Murphy must have read the article, because the system failed the week that the magazine hit the newsstands! The WD4ASW dial-in is area code (904) 396-7114 with standard 8-N-1 defaults.

(*****
WB0ZJP S.K.

Amateur Television Quarterly Magazine editor Henry Ruh, KB9FO reports the passing Dave Williams, WB0ZJP from cancer on December 12th. According to Ruh, Williams was active on VHF-UHF and microwave bands and at one time was the holder of the over land ATV DX record.

(*****
WAKE ISLAND CORRECTION

Bruce Paige, KK5DO says that our recent report on Wake Island satellite activity was incorrect. A few weeks ago we reported that Wake had never been activated on satellite. According to Bruce, back on September 8, 1993 after getting my satellite station up and running he worked NH6UY on the Amsat Oscar 13 satellite. NH6UY was on a DXpedition to Wake island and Bruce says that he has the QSL card in his hands right now.
By the way, KK5DO is a part of the team that produces the program Easy Sats that is heard on This Week in Amateur Radio over the Tech Talk Radio Network.

(*****
VK BROADCAST STANDARDS

From the international wire, VK2SKY reports that the Australian Broadcasting Authority is seeking comments from the public over proposed standards to govern the operation of Australian community radio and television stations. The standards sought cover news, current affairs, interviews, talk-backs, advertising and program classification. Richard says that hams in his country who want to comment on the proposed standards should contact the Australian Broadcasting Authority for a copy of the service proposal.

(*****
NEW UK PREFIX

Englands Radiocommunications Agency has announced that as of April 1996, new amateur call signs will be issued using an the "M" prefix instead of the "G" currently used starting with M0 for class A and M1 for class B licensees.
The change will take place even if some of the "G" prefix calls remain unused. The same regional indicators as at present will be used, for example M for England, MM for Scotland, MW for Wales and so

on.
Holders of existing "G" refix call signs and Novice call signs will

not be affected by this change.

(*****
SPECIAL EVENT STATION.

Hungary will celebrate its 1100th birthday with special event operations from 0001z January 1 until 2400z December 31. Look for participants with HA1 to HA0 or HG1 to HG0 prefixes and QSL as directed.

(*****
SWL ANNIVERSARY

And with 1996 is the 50th anniversary of the International Short Wave League, GB50SWL will be on the air throughout the year as a commemorative operation. Anyone hearing or working the station who wishes to receive a special QSL card should either QSL via the bureau or direct to David Beale, G0DBX, at his callbook address.

(*****
GRID SQUARE PIRATES

In DX, if you are looking for a VHF or UHF DX contact keep an ear open for The Grid Square Pirates. This is a VHF DX group created about 3 years ago with the sole intention of stirring up much needed activity from rare grids during the major VHF contests.
The Original Grid Square Pirate members were W3ZZ, WD8ISK, WA6GVC, ND3F and KP4XS. The group now included KZ3H, WR3E, ND3A, as well as numerous other rovers, single operator mountain-toppers and those just interested in the concept. For more information contact KP4XS at his callbook address.

(*****
LOW POWER NET

Also, VHF weak signal enthusiasts are advised of a Mid-Western U.S.

net on 144.250 on the 1st and third Sundays at 2:30 UTC. Net control Chad Phillips, KG0MW in grid square EN-13. Chad will take local check-ins first than look to Minneapolis and then to Omaha.
If you are DX to the Mid-Western United States or are a low power station, E-mail Chad ahead of time and he will listen for you. His electronic mailbox is:

chad.phillips@yebb.com

(*****
ANTARCTICA PHONE PATCHES

Finally, if you need a phone patch to Antarctica listen up. That's

right, we said Antarctica. The land of the seals and the penguins. And that where KC4AAC at Palmer Station is available for such patches every Thursday night after 00:00 hours UTC. Mark is also more than willing to hand out QSO's between phone patches and after he has completed them all.

Subject: Clegg FM-27B and Regency radios

>I'd like to echo Gary's sentiments. I too had a FM-27B, and what he
>says is correct, though technically it didn't have a VFO, rather it
>had multiple VXOs. The only dirtier rig I've owned was the Regency HR-2.
>And at least it didn't drift, the Clegg did. It was certainly a novel
>radio for its time, but not something I'd want to put back on the air
>today.

Hi all!

I have also owned the Clegg FM-27B and reflect the same problems with
its spurious output. I also had severe intermod and overload promlems
on receive, as well. It was a novelty radio to own, though, in a day
when most radios were crystal controlled and had only 6 to 12 channels.
If I remember correctly, the Clegg also was one of the few that put
out a full 25 watts in a day when 10 watts was the norm for most rigs.

As far as the Regency, I have never owned an HR-2, but I still own an
HR-6, 6 meter rig. Those radios have the most un-stable transmitter I
have ever seen. You can keep the spurs down if you tune the transmitter
on the frequency you intend to use most, into the antenna you will be
using. Don't change frequencies, though, because you will throw spurs
all over the band!

I operate on 52.525 Mhz with this radio, and if my mobile antenna gets
wet, causing the SWR to rise, The transmitter goes nuts and I start to
bring up a repeater that has its input on 51.80, almost 2 miles away!
Now thats a sloppy transmitter!!!

I would like to see more stories relating to the classic radios going back
to the days when repeaters were just becoming popular----back in the
days when you were lucky to have 10 watts, a Ringo, and 6 channels.
It would be much better reading than all of the mud that is being slung
back and forth on this newsgroup!

Hmmm, well in rec.radio, maybe that works. But I'm not sure that'll make
a good battle-flag here in a.s.d! Besides, some of us have developed a
bizarre fondness for Burt. (Hey, I read Dilbert, too!) Years ago I used
to have a pet black rat snake I was sorta fond of, too. He smelled funny,
but he was great for getting rid of dead mice...

And aside from some of the personal attack flame-wars, *some* of Burt's
inanities stimulate thought and replies, which isn't always a terrible
thing.

>TIA 73s
==========
For ROUTINE renewals, you don't use the 610 anymore, Robert. Yes - I
know - it surprised me, too. Mine expires in March. FCC sent me a
simple form many weeks back, which I signed to acknowledge that I
wanted it renewed, and sent it back. They sent the form without being
asked. Nice to have the feds doing something right!

If your address is still good in their files, you probably will get
that form soon. If not you will then REALLY need a 610 to change the
address!

From: Kevin Schmidt <kschmidt@ihnp4.ucsd.edu>
Subject: Requesting contest QSLs [was QSL etiquette]

I have read the "To QSL or not" topics. I personally reply to
all QSLs received. I also find it hard to believe that anyone, who has
time to get on the air, is too busy to write "confirmed by W1ABC", sign
the card they received, and stick it in the supplied SASE. But if
someone wants to toss away all the QSLs and SASEs he receives that's
his right. It is amusing to hear a contester suggest that he expects
operators to ask, during a contest contact, if he will reply to a QSL
request. I can see it now instead of something like this. (BTW, In my

imagination, this is in morse, and op1 is sending 35 words per minute
and op2 is sending 15 wpm.)

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY
op1: tu cq test de w1abc

I now realize that at least one contester wants:

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY and by the way, I really need Maine to finish my WAS
if I send you a card with an sase would you be willing to send
me yours k
op1: r no k
op2: ok 73 w2xyz
op1: cq test de w1abc

This may reduce the qso rate somewhat for op1, but now that I know
what's expected...

From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: <<FREE WWW Ham Radio Classified Page with Search Engine>>

The Raymond Sarrio Company9s Ham Radio WWW site is proud to announce a
FREE Ham Radio classified advertising page at
http://www.csz.com/sarrio.html. This new classified page will allow Hams
to find equipement with the help of a search engine--no need to scroll
through 1009s of listing before you find that special piece of gear. Plus,
when you find the gear you'er interested in, you are also provided with
easy point-and-click e-mail access, directly to the Ham that listed the
item.

For those Hams with gear to sell, take note! there is NO charge to list
your equipment within Ham Classifieds, and there will be no posting time
delays. Your posting(s) will go on-line in our classified search engine
in about 1 hour. All you need do is fill out a simple forms page, and upon its
(point-and-click) submission your 3For Sale2 classified is immediately
on-line.

I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.

Give it a try, and let me know how you like it (we are still beta testing)
739s Ray

From: David Hough <dave@llondel.demon.co.uk>
Subject: GB2RS News 4th February 1996

Good morning. It's Sunday the 4th of February and here is the GB2RS news
broadcast, prepared by the RSGB and intended for all radio amateurs and
short-wave listeners.

The RSGB responded quickly to reports on radio and TV, and in
newspapers, about the Duke of Edinburgh's phone conversation being taped
by "a radio amateur" or "radio ham". A press release was sent to all
national newspapers and to radio and TV stations stating that "there is
no evidence whatsoever" that the telephone conversation was intercepted
and recorded by a licensed radio amateur. The individual named in the
newspapers as taping the Duke of Edinburgh's phone conversation is not a
member of the RSGB and it is firmly believed that he does not hold an

amateur radio licence. The RSGB press release also pointed out that equipment capable of receiving analogue mobile phones is widely available and may be purchased quite legally by anyone.

The RSGB General Manager, Peter Kirby, G0TWW, was also interviewed by Independent Radio News, Associated Press, Sky TV News, and Channel 1 Cable TV on Tuesday and Wednesday over the matter.

A new 50MHz GB2RS news broadcast serving Central Scotland is starting today, the 4th of February, at 11.30 am. Initially, it will be for an experimental period of three months but will be continued if it proves to be a success. The transmission will be from the station of Tom Menzies, GM1GEQ, and will be on 51.530 MHz with vertical polarisation. Reports will be welcome, and should be sent to GM1GEQ via the RSGB QSL bureau.

The Barnsley and District Amateur Radio Club is co-ordinating a coach trip to Friedrichshafen in June on behalf of the RSGB. The Friedrichshafen 'Hamfest' is Europe's largest amateur radio exhibition. The coach will depart on Wednesday the 26th of June and return on Tuesday the 2nd of July and pick-ups can be arranged at pre-determined locations en route. Places are allocated on a first come, first served basis so contact the organiser, Ernie Bailey, G4LUE, without delay. He is available on 01226 716339, or 0836 748958, between 6.00 and 8.00pm.

There is a new QSL Bureau Sub-Manager for the GM0AAA to LZZ series of callsigns. He is Fred Roe, GM0ALS, and his address is 8 South Gyle Gardens, Edinburgh. The postcode is EH12 7RZ. The address may also be found in the RSGB Call Book under GM0ALS.

The Radio Amateur Invalid and Blind Club Northern Ireland Area is holding a flag day collection in the Ballymena town centre shopping complex on Friday the 9th of February between about 10.00 am and 9.00 pm. Anyone who can help for a few hours should contact David Caldwell, GI0HOW, on 01232 471370, or send a fax to him on 01232 471980, to arrange times and identification permits.

On Saturday the 10th of February, the Lincoln Short Wave Club is celebrating its 75th anniversary. The club was formed as the Lincoln Wireless and Scientific Society in 1921. There will be an exhibition and special event station at the Lawn Complex, Lincoln, from 12 noon until 5.00 pm, with a celebratory dinner in the evening. The day's events will be opened jointly by the Mayor of Lincoln, Councillor Geoff Ellis, and RSGB President Peter Sheppard, G4EJP. For further details of this, or the club's other activities, please contact John Middleton, G8VGF, on 01522 525760.

The annual Guides 'Thinking Day on the Air' takes place over the weekend of the 24th and 25th of February. A pack is available from RSGB HQ consisting of a list of participating special event stations and details of the countries which permit third party Greetings Messages during this event. Groups using a GX or similar prefix instead of a GB call are

asked to contact Mrs Eva Telenius-Lowe at RSGB Headquarters by this Friday, the 9th of February, in order to be included on the list of participating stations. If you would like the pack, please send an A4-size self-addressed envelope, with 38p in stamps, to Eva at RSGB HQ.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

Fact is the company who made the relay for ICOM in Japan went out of business several years ago. Before that happened ICOM tried to forcast the requirements for the relay for the next 5 years. Thye used them up in the 9 to 10 years that have passed since that time.

>5000 lbs of lift required. As you can see, hot air is not going to cut

>it!

That's a rather incredible amount of lift for a weather balloon (which of course *isn't* a hot air balloon anyway). I don't know where you're getting your figures, but 350 pounds for 500 feet of #14 is absurd (it's also 75% of the yield limit of the wire, so it wouldn't take much catenary loading from the wind to exceed the limit). 500 feet of bare 14 gauge copper wire only weighs about 6.25 pounds. That's too much load for a 10 foot Wx balloon, of course, but you'd use something a bit thinner, say #22, which would only weigh a pound for 500 feet. It'd break in a 24 MPH gust, though.

And I guarantee that if there is any wind at all, that balloon is going to lay out along the ground instead of standing overhead. With a 10 foot balloon, #22 wire, and a 15 MPH wind, that corresponds to a slant angle of about 84 degrees off zenith. With very light breezes, the balloon may stand as high as 45 degrees off zenith, but it would have to be dead calm for it to approach zenith more closely than that. A lifting body, however, like the advertising blimps, can be set to rise into the wind, and they can approach zenith fairly closely, to better than 30 degrees off zenith. The angle from zenith corresponds to the sum of the tangents of the vector forces at work.

>For some reason everyone is thinking Wagner is stupid. We have talked in >mail about this in the past. I think that he has a good idea, and with a >lot of planing his club will do just fine.

I don't think he's stupid. I just think he doesn't have experience with tethered balloons of this nature, and that he hasn't done the math to see what angle the forces involved will yield. There are three primary force vectors, lift, gravity, and wind loading. Those are tied together by the catenary of the wire to yield the angle of repose for the system. All the data you need is in the CRC Handbook.

If you've got a *lot* of excess lift, you can pull the wire more nearly vertical for a given wind speed, but a lot of lift corresponds to a *large* balloon, and that has a correspondingly large frontal area to present to the wind, so the vectors still lead to a large angle off zenith. The advantage of the lifting bodies is that they can supply lift *without* a corresponding increase in frontal area, so they can reduce the angle from zenith a lot more. Unfortunately, that puts more stress on the tether too, so you have to go to a larger gauge, and that adds weight. It can be a vicious circle.

If he lays out 2,000 to 10,000 feet of wire, he's creating an incredible hazard if it gets away from him. The odds of it all coming down where it'll miss a power line are pretty slim. Though for a Wx balloon to lift that much he's going to have to use #30 or smaller, and it'll just vaporize when it tangles with the power lines (automatic fuse). (And it'll break under it's own weight and wind loading before it reaches full height anyway.)

Now there is another way. If he uses a large (manned) hot air balloon, he can three point tether it with heavy steel cable and just hang the antenna

wire vertically below it. That may be what you're thinking of. He's not going to reach 2,000 to 10,000 feet that way, however. Something on the order of 300 feet might be possible before stresses on the central tether connection to the balloon get out of hand during wind gusts.

(Of course he could use a *huge* tethered blimp, such as TV Marti uses, and reach 10,000 feet, but I doubt he can afford that, Congress is debating whether the US can afford that.)

> For those of us that do use CW and enjoy it. Brag about it, you have a
> skill that was work to get and some folks don't have.

Well goody for you.

Let me put it this way. Many people are never going to use CW. The work
required to learn CW is pointless. Do you enjoy pointless? I think you
should have to learn braille in order to get you license. It makes just
as much sense.

I don't know why I'm jumping in here, the old "I had to do it so you
should have to do it also" is a rather shortsighted attitude. It goes
to show that improvement of ham operators is the least of your worries,
you just worried someone might get the priviledges with less work. On
the other hand... I get the fealing that alot of CW proponents are afraid
that they wouldn't be able to deal with real competance tests. If CW went
away you might actually have to demonstrate theory competance with a
non-gimmee test.

So, is it better to keep numbers down via ancient skills that are unnecessary,
or is it better to force people to develop modern, relevant skills?

As for those that want the CW frequencies, that's fine, those people can
learn morse since it will be relevant to them. I would be all for
maintaining those as pure CW.

William,

The NIR-10 4.0 upgrade should allow you to duplicate ANY 3.0 setting,
since all the original code is still there - just with added features.
I made sure of that when I wrote the upgrade code. If you need a set
of the old v3.0 EPROMs to compare with, give me a call at JPS.

Why not have a techology filter? In fact, why have a filter at all? The answer is alluded to by your next paragraph.

>>Face it, nobody really builds their own radios any more. Look in
>>the ham radio magazines and what do you see? Answer: mega-
>>dollar ham radios. This is the only difference between a ham radio
>>operator and a C.B. radio operator.

It is that *everybody* used to behave with more decorum, until decorum and politeness gave way to PCism and everybody's right to say whatever they want, whenver they want, dammit!

This is a general societal problem (and ham radio is more or less a microcosm of society). The problem isn't solved by simply having a lid filter. Besides -- no filter is perfect. Remember Murphy's Third Law: Foolproof systems give rise to more clever fools.

>>If this attitude were pervasive, we would have penmanship tests to
>>use a state park, pie eating contests to drive on the public
>>highways and height requirements to run for elected office. The

>your analogies are shaky at best.

Maybe, maybe not. It remains to be seen (just ask over in rec.radio.amateur.policy someday) exactly what benefit, if any, continued Morse training has for the Amateur Radio Service.

>The influx of poor operators since the advent of the no-code license is
>staggering. I have never heard so much foul language and obnoxious

>license classes. Anyone who truly wants a ham license will find that
>learning the code at the required snail's pace is no barrier at all...or
>am I overestimating people's abilities?

No, but if you're simply in a mood to create artificial barriers, make them *good* ones. How about jumping out of an empty oil barrel? Or ditch-digging (Gary KE4ZV's favorite)? Let's really make it a good one: each license applicant must successfully lobby the FCC to turn one of our UHF+ allocations into "amateur exclusive".

As for the lack of good operators, there has also been a lack of good elmering, especially by the W#xxx and K#xxx calls from days of old who look down their noses at the new licensees. Some attitude adjustment is called for all around.

QSL has two official usages. "QSL?" means "Do you acknowledge receipt
of my traffic?" "QSL" means "I acknowledge receipt of your traffic."
They are procedural signals intended to be used for *over the air*
message handling, nothing about postal cards or snail mail is implied.

Subject: Using DSP to emulate a TNC

Hey guys/gals/other:

I am trying to use digital signal processing to emulate a TNC for packet
communication. Right now, I'm at the very start of my research, so I'm
looking for resource information.

1) What are the best WWW locations for DSP information?
(My crawler shows quite a few, but I don't know which ones are useful)

2) Where can I find documentation detailing how a TNC operates?
I know vaguely what is in there, but I really need the details.

Feel free to respond via this thread or by direct email.
Thanks,
Vince

Subject: What does CQ mean?

I had always thought that CQ was "come quick" but it could be an "old wyfe's tail."

The distress prosign was CQD (the D stood for "danger"?)

When the Titanic went down they transmitted CQD, then tried the (then) recently adopted distress signal SOS - proported to be the
first use of SOS.

No, I don't have the references for the above. Just passing it along.

Six is becoming popular, but due to the current state of the sunspot cycle you won't find much beyond local activity except during the infrequent band openings. *Then* it can get real busy. But if you're going to restrict yourself to one VHF+ band, I'd think seriously about a 70cm or 2m SSB rig before I'd set up for 6m. That's because there are many more operators, and more enhanced propagation modes to explore, on those bands. Your "dx" won't be global in scope (unless you go for EME), but it will be more frequent and more hectic as you chase tropo, aurora, and satellites.

However, if you're patient, a 3 element beam and a 100 watts on 6 meters can give you globe spanning results when the band does open. Meteor scatter also works better here than on 2 meters. In 4 or 5 years when the sunspot cycle comes around, 6 will be open to somewhere in the world almost daily.

Gary

>email - ee95ajm@brunel.ac.uk

Well 6m is good in the summer with sporadic 'e' but e's each day
become a bit boring especially after your log fills up with italians
and balkan area people. When the DX is around you might need a bit of
power to break the pile up.....and when there are no 'e's about it's
as dead as a dodo. Until conditions improve I'd leave it as your main
band.

For my money I'd go for 2m, much more activity especially in the
South, up here in the sticks it's quiet. But you could get a rig such
as an IC251e (around 300UKP) and add an amplifier to take it beyond
the 10 watts it normally gives out. For example, with 70 watts and a
9ele yagi I managed to work down to Reading from Edinburgh last night.
Ok it was a prearranged sked but that appears to be the only way to
get a long distance qso these days.......

Cheers,

Gavin,

Date: (null)
From: (null)

A German group leaves home today for an operation from Christmas Island as VK9XY until Tuesday the 13th of February. They then go on to the Cocos-Keeling Islands as plan activity as VK9CR between the 14th and 23rd of February. They will operate CW and SSB on 160 to 6 metres, plus RTTY and satellites.

And from Barbados, VE4GV plans to be active as 8P9EN from Thursday the 8th until the 15th of February on all bands 80 to 10 metres, mostly CW.

Next the Rally News:

The Lancastrian Rally is taking place at the University of Lancaster today, the 4th of February. The doors open at 11.00, or 10.30am for disabled visitors.

Also today, the South Essex Amateur Radio Society Radio Rally is taking place at The Paddocks, Long Road, Canvey Island. The event includes RSGB Morse Tests on demand - candidates are reminded that they will need to take the test fee and two passport-size photographs along. Doors open at 10.30 am.

Next Sunday, the 11th of February, the Northern Cross Rally takes place at the Thornes Park Athletics Stadium on the A642 Horbury Road in Wakefield, which is a new venue for this rally. The event features the usual dealers, a bookstall and bring-and-buy stand, an RSGB Propagation Studies Committee stand and Morse Tests on demand. Please bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at the rally. Talk-in will be provided on 2 metres channel S22 and 70 centimetres channel SU22, and further details can be obtained from G0FLX on 0113 238 3622.

Also on Sunday the 11th, the Cambridge and District Amateur Radio Club Rally takes place at the Ambulance Station at Addenbrookes Hospital. The event features trade stands, a bring and buy stall and car boot sale. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For more details contact John, G0GKP, on 01954 200072.

And now a date for your diary:

The RSGB National VHF Convention takes place at the usual venue - Sandown Park in Surrey - two weeks from today, on Sunday the 18th of February. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show and special interest groups. Full details are in the February edition of Radio Communication.

A new award in memory of Cyril James, G3VVB, and aimed at the home constructor of microwave equipment, will be presented for the first time at the RSGB VHF Convention. If you have an item of home-made microwave equipment and you are proud of the way you've constructed it, then why not bring it along to the Convention and enter it in the competition? The equipment can be constructed from any design, or from a kit - what the judges will be looking for particularly is quality of construction and finish. If you cannot attend the Convention in person, you may send detailed photographs and a written description to Steve Davies, G4KNZ, whose address is correct in the RSGB Call Book.

Now for the HF contest news:

The final session of the RSGB LF Cumulative is on 80 metres today, Sunday the 4th of February, between 16 and 1800 UTC. The rules were published in last September's RadCom, but please note that the dates were given incorrectly in September. The correct dates are shown in the February RadCom.

Next weekend, the RSGB 1.8MHz CW Contest takes place from 2100 UTC on Saturday the 10th until 0100 UTC on Sunday the 11th of February. The rules are in the September RadCom.

And the Dutch PACC Contest takes place on CW and SSB for 24 hours from 1200 UTC on Saturday the 10th. Brief rules are on page 22 of the February RadCom.

Next some VHF contest news:

The 432 MHz RSGB Affiliated Societies and Fixed Station Contest is taking place today, the 4th of February, between 09 and 1500 UTC.

And next Sunday, the 11th of February, the third session out of five in the RSGB 70 MHz Cumulative Contests will take place between 10 and 1200UTC. The rules for all these contests can be found in last September's RadCom.

And now the solar factual data:

The period from the 22nd to the 28th of January saw solar activity at very low levels and the geomagnetic field at quiet levels. Only one small sunspot group remained on the solar disc, and the mean was 7. Solar flux levels increased very slightly from 72 units on the 22nd to 74 units on the 25th. They remained at that level until the 28th and the average was 73 units. No solar flares were reported. Electron fluence declined slightly but remained at a moderate level. X-Ray flux remained at its minimum level of A1.0 every day. The 90-day solar flux average on the 28th was 74 units, the same as last week.

Geomagnetic activity was "quiet", with the levels down to only Ap 3 units on the 25th. The average was Ap 5 units. The aa indices, as supplied by the British Geological Survey for the period from the 16th to the 22nd of January, increased from "unsettled" on the 16th with 15 nanoTeslas recorded, to "active" levels which lasted through to the

20th, when conditions returned to "unsettled". The most disturbed day was the 17th, with 26 nanoTeslas. The average for the period was 20 nanoTeslas, which is just K3.

I'll repeat the figures: spots - 7, flux - 73, Ap index - 5, X-Ray flux - A1.0.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 19th to the 25 of January, improved every day from 5.1MHz on the 19th, to 6.7MHz by the 25th. The average was 6.1MHz. The darkness hour lows decreased slightly from 2.2MHz on the 19th to 1.9MHz by the 23rd, but then increased to end the period at 2.5MHz. The average was 2.2MHz. The daytime highs took place between 0900 and 1400 hours. The darkness hour lows took place between 0400 and 0600 hours every day. Two short periods of sporadic E took place on the 22nd and the 24th.

I'll repeat the figures: highs - 6.1MHz, lows - 2.2MHz.

And lastly the solar forecast:

This week the quiet side of the sun is expected to rotate into view and later in the week the solar disc could become spotless. Solar flux levels are expected to decline to the high 60s. Geomagnetic activity is expected to be very quiet, but later in the week activity could increase to "active" conditions. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north, but levels could decline towards next weekend. The darkness hour lows are expected to be about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Victor and G7 Whisky Alfa series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Quebec series.

I agree that they didn't do a very good job scanning the images (they
aren't squared up, either), but at least it's a start. I found if you
import the image into a graphics program, you can square it up, fill it
out, and print it out. I did this for my change of address and it worked
just fine -- UALR callbook server shows my new address.

If I was submitting for a new license or upgrade, I think I'd hunt down a
VE to get a real 610, but the downloaded/faxed form will work.

Alaska doesn't have counties in the traditional sense. The state is broken up into several "boroughs", a small number that escapes me at the moment. These boroughs are huge in size larger than many states and have the equivilent of county governments. For specifics of how the ARRL views these political subdivisions you would have to contact them but I may be able to help you locate your QSLs. Send me the addresses or zip codes and I will determine what borough they are in and let you know. I never got into the DXCC and WAS county hunter stuff but am glad to give you a hand, who knows I may just learn something.

Once again the Prodigy, cyber-retentive, cloak threat, holier than thou, speaketh. If you guys cant take a joke than turn off your monitors.
As far as "legal proceedings" against the posting of a users views I suggest you consult the 1st Amendment. You could not even prove conspiracy based on the posting unless specific names and locations where included.
I suggest you half-wits stick to Ham Radio and leave living our lives to the fullest to the rest of us.

Hey -- don't blame AMSAT!! A thread developed on the amsat-bb@amsat.org mail exploder asking the question, and it generated a lot of replies.

If by "they" you mean the AMSAT Board/Officers, this is >>NOT<< a topic of discussion in those circles.

Tom Clark, W3IWI

:
:
In general there are enough listeners out there on any particular satellite pass that calling CQ will get you a contact. The birds are congested enough that finding a quiet spot on the more popular ones (e.g. RS-10/11) is hard to do. Adding extra traffic with a satellite-focused contest would overload them such that you'd probably have *less* chance of making a contact.

On top of all that, add in the temptation that contests bring to bump your power level and elbow your way onto the bird, and you'll end up with what I heard a few years ago during Field Day. Someone with a very strong signal kept calling CQ CQ CQ and his call sign 3-4 times, over and over, waiting a bare fraction of a second between each call. Since this was on AO-21, an FM bird (one QSO at a time), all he did was monopolize the entire pass with his calling. He never did make a contact, nor did anyone else.

A Satellite-focused contest would be an interesting experiment to see how our Amateur satellite fleet handles extreme overload, power management, battery failures, and other such things, but I'm not sure it'd be worth it.

If you want to have some long distance chats with a Tech license, satellite communication is the way to go, but you don't need or want a contest to "help".

I vote NO.

Subject: DC connectors and wiring

ARRL Field Service, and Dallas RACES DC Connector Standards

The DC connector as recommended for Dallas RACES is the same as the one that ARRL Field Service recommends, the 2 pin Molex connector with .093" pins for DC.
The drawing for this connector configuration can be found in the ARRL hand book.
Having a standard connectors for DC and antennas and audio has proved it "worth" time after time during tornado and weather situations.
During the emergency communications efforts after the Lancaster tornado, lots of amateurs who were non RACES, volunteered there equipment to help. Because of the variety of connectors much of it could not be used during the first few hours of the effort. There simply was not time to modify the equipment during the initial effort.

Amperage Rating

Some people will argue that ARRL field service people "blew it" and this DC connector is not good for High Power (50 to 70 watts) 2 meter rigs as the connector is rated at 8 Amps. Please note that Radio Shack was very conservative with manufacturers ratings. This connector from Molex is actually rated at 12 amps.
The connector was tested by my Employers Quality lab at 13.8 V at 10 amps. After 50 connect/disconnect cycles the drop across the connector was 50mv at 10 amps, and after 200 connect/disconnect cycles the drop across the connector was 57mv at 10 amps. This connector will withstand a whole lot abuse and still work considering the "intermittent duty" nature of most mobile radios.

Parts and Part Numbers

This connector can be found by the Radio Shack part number 274-222.
This part number is a kit that contains 1 each male and female shell and 2 each male and female pins.
AMP and Molex make identical connectors that are directly interchangeable and in fact carry the same part, under identical part numbers. For those wishing to buy in bulk, the AMP/Molex part numbers are:

Male shell 03-09-2021
Female shell 03-09-1022
Male .093 Pin 02-09-2103
Female .093 Pin 02-09-1104

Each year after the National Weather Service "Skywarn" school we have a "connectorizing party" to introduce new RACES members to the connector standards and to help any who might be having trouble getting there radios

standardized. This is done for the price of the connectors or they can provide there own.

Crimping or soldering

Our tests on this connector showed that most of the failures on this connector came not from the connector itself, but from improper field crimping. The failed connectors we tested failed because of crimps made with "any tool available" rather than the crimping tool recommended by AMP/Molex. The improper crimping caused arcing with the associated carbon contamination. Further tests showed that even improperly crimped connectors performed to spec. or better if soldered. For this reason in Mobile applications, CRIMP and SOLDER.
There is a NASA specification that calls for connectors to be "crimped when possible". It should be noted that this specification also covers the manufactures crimping recommendations and tooling.

Wire

Another failure mode that was noted was not from the connector but from the wire used with the connector. For Mobile applications 18 AWG (American Wire Gauge) is rated for 14 to 18 amps. Lamp or extension "zip" cord is rated in the 12 to 14 amp region.
18 AWG stranded wire is found in most any automotive parts store. Suppliers such as Radio Shack do not carry this size wire. Many of the failures came from people "one stop shopping" using smaller wire or solid wire that R'S. carried rather than purchase the larger "automotive" stranded wire.

Insulation and Strain Relief

After recommended crimping, you can add both extra insulation (to prevent fraying) and strain relieve at the same time with the addition of heat shrink tubing. Insulate both conductors with a 2 inch length of heat shrink per conductor. Make sure that the crimp part of the pin is covered with tubing. Shrink the tubing. After this is done, pass both insulated conductors through a slightly larger diameter of shrink tubing. A length of about 1.5 inches seems to work well, Place both of the conductors in the shell and seat the pins, slide the larger heat shrink down to connector shell, then shrink. Among other things this gives the connector a professional "finished" look.
The strain relief part from Molex works very well but is hard to come by in small quantity and is expensive. This compromise has worked well. Adding this insulation modification to an already assembled connector is possible with the "extraction" tool available from AMP, Molex and Radio Shack.

Using the larger "Heavy Duty" 20 amp connector from Radio Shack

Again for those who argue that the 8 amp connector is to small, Radio Shack also carries a larger, heavy duty connector similar to a Molex. (Female connector and Pins 274-154, Male connector and Pins 274-151). Besides the larger pins and current capacity, this connector has a very

nice "positive locking" latch molded in the nylon. These larger connectors seem to be in favor with the amateurs who like Mobile HF work. Additionally, these connectors can accommodate a much larger wire size. 10 to 14 AWG. Again Radio Shack was very conservative with their ratings on this connector.
For those amateurs who use these connectors as their "standard" in the Dallas area, they also carry an adapter to convert this connector to the ARRL/Dallas RACES standard.

Existing Original Equipment Manafactures (OEM) Connectors

Many amateurs do not like to modify there equipment from the manufactures connector. They prefer to leave there equipment "original" as this aids in resell value. Again all that is required for the standardization scheme, is to have an adapter available to convert to the standard.
The OEM connectors do not have to be replaced, simply adapted to the standard.

I work contests _only_ to bag new country/band/mode combinations,
and stick to the game plan during the contests (ie. no rag chewing).
I QSL virtually all the contacts I make during the contest. I think
it's fair to expect cards in return, as long as you include return
postage and SAE. This applies to _all_ QSL's. We're entitled to
the card, but not necessarily the postage or the addressing.

There are a few repeaters in southern California that use "odd" splits (each
one has a different I/O spacing), but for the most part new systems stuff
themselves onto existing 600 KHz spaced channels. Not many new systems
considering how stuffed the band is here already, but use of CTCSS access (PL)
helps a lot.

From: david_b3@sfov1.verifone.com
Subject: Advice Wanted on Buying 2-Meter Mobile Rig

I'm in the market for a 2-meter mobile rig, and want to know anybody's
thoughts on the following scanarios:

1. Buy a new, basic Kenwood/Yaesu/Icom, which I can get for around
$270-300. One year warranty. Reliable gear, but after the warranty runs
out, potentially high repair bills (my 3-year-old Alinco DJ-580T HT has
been in twice for repairs since the warranty ran out).

2. Buy a new Radio Shack HTX-212, which I can get for $299, with an optional
5-year warranty for like $40-50. Not as good as the Kenwood/Yaesu/Icom
rigs, but I won't have to shell out additional bucks over the next 5 years.

3. Buy a used K/Y/I rig, which would be cheaper, but if anything goes
wrong, potentially big repair bucks.

4. Buy a used RS HTX-212 rig, for which you can still get a 5-year
warranty, if it was purchased recently.

Money IS an issue, and I'd like to get the best rig I can for the least
investment over the next 5 years.

ANY and ALL advice is appreciated!

From: jamesm@sw2.canberra.edu.au (Jim Muller VK1FF/WB2FFY)
Subject: Alaskan Counties

I'm working on the USA County Award and need some help
with the Alaskan counties. The county hunters book I have lists
the counties as 1st District, 2nd District, 3rd District, and 4th
District. However, my Funk & Wagnalls Hammond World
Atlas lists the four areas as Northeastern, Central, South Central,
and Southeastern.

Out of all the KL7 QSLs I've received only one has the county
printed on it....so I'm pretty sure 3rd district = South Central.

Any help would be appreciated.

The answer is no farther than Part 97. You'll find the only amateur radio
gear requiring type acceptance are exernal power amplifiers for use below
144MHz (97.315, 97.317).

Maybe in the U.K. (I don't know), but the FCC rules only specify that
external power amplifiers for use *below* 144MHz require type acceptance.
Look at 97.315 and 97.317.

>had multiple VXOs. The only dirtier rig I've owned was the Regency HR-2.
>And at least it didn't drift, the Clegg did. It was certainly a novel
>radio for its time, but not something I'd want to put back on the air
>today.

Hi all!

I have also owned the Clegg FM-27B and reflect the same problems with
its spurious output. I also had severe intermod and overload promlems
on receive, as well. It was a novelty radio to own, though, in a day
when most radios were crystal controlled and had only 6 to 12 channels.
If I remember correctly, the Clegg also was one of the few that put
out a full 25 watts in a day when 10 watts was the norm for most rigs.

As far as the Regency, I have never owned an HR-2, but I still own an
HR-6, 6 meter rig. Those radios have the most un-stable transmitter I
have ever seen. You can keep the spurs down if you tune the transmitter
on the frequency you intend to use most, into the antenna you will be
using. Don't change frequencies, though, because you will throw spurs
all over the band!

I operate on 52.525 Mhz with this radio, and if my mobile antenna gets
wet, causing the SWR to rise, The transmitter goes nuts and I start to
bring up a repeater that has its input on 51.80, almost 2 miles away!
Now thats a sloppy transmitter!!!

I would like to see more stories relating to the classic radios going back
to the days when repeaters were just becoming popular----back in the
days when you were lucky to have 10 watts, a Ringo, and 6 channels.
It would be much better reading than all of the mud that is being slung
back and forth on this newsgroup!

I can't speak for Drew, but I certainly would like to see a "real" theory
test, although I'm not exactly sure what it would be.

Please respect the Followup-to: line.

I can't recall the last time I read something as nauseatingly hypocrical
as this. Was this a joke or were you snorking coke, Al?

Don't judge the "next guy", Al, for you're at the back of the line with
that first statement of yours. If you can't be bothered buying a 20 cent
stamp then just peel off the stamp from the other fellow's card and reuse
it. Sheesh!

Hmmm, well in rec.radio, maybe that works. But I'm not sure that'll make
a good battle-flag here in a.s.d! Besides, some of us have developed a
bizarre fondness for Burt. (Hey, I read Dilbert, too!) Years ago I used
to have a pet black rat snake I was sorta fond of, too. He smelled funny,
but he was great for getting rid of dead mice...

And aside from some of the personal attack flame-wars, *some* of Burt's
inanities stimulate thought and replies, which isn't always a terrible
thing.

For ROUTINE renewals, you don't use the 610 anymore, Robert. Yes - I
know - it surprised me, too. Mine expires in March. FCC sent me a
simple form many weeks back, which I signed to acknowledge that I
wanted it renewed, and sent it back. They sent the form without being
asked. Nice to have the feds doing something right!

If your address is still good in their files, you probably will get
that form soon. If not you will then REALLY need a 610 to change the
address!

From: Kevin Schmidt <kschmidt@ihnp4.ucsd.edu>
Subject: Requesting contest QSLs [was QSL etiquette]

I have read the "To QSL or not" topics. I personally reply to
all QSLs received. I also find it hard to believe that anyone, who has
time to get on the air, is too busy to write "confirmed by W1ABC", sign
the card they received, and stick it in the supplied SASE. But if
someone wants to toss away all the QSLs and SASEs he receives that's
his right. It is amusing to hear a contester suggest that he expects
operators to ask, during a contest contact, if he will reply to a QSL
request. I can see it now instead of something like this. (BTW, In my

imagination, this is in morse, and op1 is sending 35 words per minute
and op2 is sending 15 wpm.)

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY
op1: tu cq test de w1abc

I now realize that at least one contester wants:

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY and by the way, I really need Maine to finish my WAS
if I send you a card with an sase would you be willing to send
me yours k
op1: r no k
op2: ok 73 w2xyz
op1: cq test de w1abc

This may reduce the qso rate somewhat for op1, but now that I know
what's expected...

From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: <<FREE WWW Ham Radio Classified Page with Search Engine>>

The Raymond Sarrio Company9s Ham Radio WWW site is proud to announce a
FREE Ham Radio classified advertising page at
http://www.csz.com/sarrio.html. This new classified page will allow Hams
to find equipement with the help of a search engine--no need to scroll
through 1009s of listing before you find that special piece of gear. Plus,
when you find the gear you'er interested in, you are also provided with
easy point-and-click e-mail access, directly to the Ham that listed the
item.

For those Hams with gear to sell, take note! there is NO charge to list
your equipment within Ham Classifieds, and there will be no posting time
delays. Your posting(s) will go on-line in our classified search engine
in about 1 hour. All you need do is fill out a simple forms page, and upon its
(point-and-click) submission your 3For Sale2 classified is immediately
on-line.

I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.

Give it a try, and let me know how you like it (we are still beta testing)

Date: Thu, 01 Feb 96 19:41:06 GMT
From: David Hough <dave@llondel.demon.co.uk>
Subject: GB2RS News 4th February 1996

Good morning. It's Sunday the 4th of February and here is the GB2RS news
broadcast, prepared by the RSGB and intended for all radio amateurs and
short-wave listeners.

The RSGB responded quickly to reports on radio and TV, and in
newspapers, about the Duke of Edinburgh's phone conversation being taped
by "a radio amateur" or "radio ham". A press release was sent to all
national newspapers and to radio and TV stations stating that "there is
no evidence whatsoever" that the telephone conversation was intercepted
and recorded by a licensed radio amateur. The individual named in the
newspapers as taping the Duke of Edinburgh's phone conversation is not a
member of the RSGB and it is firmly believed that he does not hold an

amateur radio licence. The RSGB press release also pointed out that equipment capable of receiving analogue mobile phones is widely available and may be purchased quite legally by anyone.

The RSGB General Manager, Peter Kirby, G0TWW, was also interviewed by Independent Radio News, Associated Press, Sky TV News, and Channel 1 Cable TV on Tuesday and Wednesday over the matter.

A new 50MHz GB2RS news broadcast serving Central Scotland is starting today, the 4th of February, at 11.30 am. Initially, it will be for an experimental period of three months but will be continued if it proves to be a success. The transmission will be from the station of Tom Menzies, GM1GEQ, and will be on 51.530 MHz with vertical polarisation. Reports will be welcome, and should be sent to GM1GEQ via the RSGB QSL bureau.

The Barnsley and District Amateur Radio Club is co-ordinating a coach trip to Friedrichshafen in June on behalf of the RSGB. The Friedrichshafen 'Hamfest' is Europe's largest amateur radio exhibition. The coach will depart on Wednesday the 26th of June and return on Tuesday the 2nd of July and pick-ups can be arranged at pre-determined locations en route. Places are allocated on a first come, first served basis so contact the organiser, Ernie Bailey, G4LUE, without delay. He is available on 01226 716339, or 0836 748958, between 6.00 and 8.00pm.

There is a new QSL Bureau Sub-Manager for the GM0AAA to LZZ series of callsigns. He is Fred Roe, GM0ALS, and his address is 8 South Gyle Gardens, Edinburgh. The postcode is EH12 7RZ. The address may also be found in the RSGB Call Book under GM0ALS.

The Radio Amateur Invalid and Blind Club Northern Ireland Area is holding a flag day collection in the Ballymena town centre shopping complex on Friday the 9th of February between about 10.00 am and 9.00 pm. Anyone who can help for a few hours should contact David Caldwell, GI0HOW, on 01232 471370, or send a fax to him on 01232 471980, to arrange times and identification permits.

On Saturday the 10th of February, the Lincoln Short Wave Club is celebrating its 75th anniversary. The club was formed as the Lincoln Wireless and Scientific Society in 1921. There will be an exhibition and special event station at the Lawn Complex, Lincoln, from 12 noon until 5.00 pm, with a celebratory dinner in the evening. The day's events will be opened jointly by the Mayor of Lincoln, Councillor Geoff Ellis, and RSGB President Peter Sheppard, G4EJP. For further details of this, or the club's other activities, please contact John Middleton, G8VGF, on 01522 525760.

The annual Guides 'Thinking Day on the Air' takes place over the weekend of the 24th and 25th of February. A pack is available from RSGB HQ consisting of a list of participating special event stations and details of the countries which permit third party Greetings Messages during this event. Groups using a GX or similar prefix instead of a GB call are

asked to contact Mrs Eva Telenius-Lowe at RSGB Headquarters by this Friday, the 9th of February, in order to be included on the list of participating stations. If you would like the pack, please send an A4-size self-addressed envelope, with 38p in stamps, to Eva at RSGB HQ.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

Fact is the company who made the relay for ICOM in Japan went out of business several years ago. Before that happened ICOM tried to forcast the requirements for the relay for the next 5 years. Thye used them up in the 9 to 10 years that have passed since that time.

>5000 lbs of lift required. As you can see, hot air is not going to cut

>it!

That's a rather incredible amount of lift for a weather balloon (which of course *isn't* a hot air balloon anyway). I don't know where you're getting your figures, but 350 pounds for 500 feet of #14 is absurd (it's also 75% of the yield limit of the wire, so it wouldn't take much catenary loading from the wind to exceed the limit). 500 feet of bare 14 gauge copper wire only weighs about 6.25 pounds. That's too much load for a 10 foot Wx balloon, of course, but you'd use something a bit thinner, say #22, which would only weigh a pound for 500 feet. It'd break in a 24 MPH gust, though.

And I guarantee that if there is any wind at all, that balloon is going to lay out along the ground instead of standing overhead. With a 10 foot balloon, #22 wire, and a 15 MPH wind, that corresponds to a slant angle of about 84 degrees off zenith. With very light breezes, the balloon may stand as high as 45 degrees off zenith, but it would have to be dead calm for it to approach zenith more closely than that. A lifting body, however, like the advertising blimps, can be set to rise into the wind, and they can approach zenith fairly closely, to better than 30 degrees off zenith. The angle from zenith corresponds to the sum of the tangents of the vector forces at work.

>For some reason everyone is thinking Wagner is stupid. We have talked in >mail about this in the past. I think that he has a good idea, and with a >lot of planing his club will do just fine.

I don't think he's stupid. I just think he doesn't have experience with tethered balloons of this nature, and that he hasn't done the math to see what angle the forces involved will yield. There are three primary force vectors, lift, gravity, and wind loading. Those are tied together by the catenary of the wire to yield the angle of repose for the system. All the data you need is in the CRC Handbook.

If you've got a *lot* of excess lift, you can pull the wire more nearly vertical for a given wind speed, but a lot of lift corresponds to a *large* balloon, and that has a correspondingly large frontal area to present to the wind, so the vectors still lead to a large angle off zenith. The advantage of the lifting bodies is that they can supply lift *without* a corresponding increase in frontal area, so they can reduce the angle from zenith a lot more. Unfortunately, that puts more stress on the tether too, so you have to go to a larger gauge, and that adds weight. It can be a vicious circle.

If he lays out 2,000 to 10,000 feet of wire, he's creating an incredible hazard if it gets away from him. The odds of it all coming down where it'll miss a power line are pretty slim. Though for a Wx balloon to lift that much he's going to have to use #30 or smaller, and it'll just vaporize when it tangles with the power lines (automatic fuse). (And it'll break under it's own weight and wind loading before it reaches full height anyway.)

Now there is another way. If he uses a large (manned) hot air balloon, he can three point tether it with heavy steel cable and just hang the antenna

wire vertically below it. That may be what you're thinking of. He's not going to reach 2,000 to 10,000 feet that way, however. Something on the order of 300 feet might be possible before stresses on the central tether connection to the balloon get out of hand during wind gusts.

(Of course he could use a *huge* tethered blimp, such as TV Marti uses, and reach 10,000 feet, but I doubt he can afford that, Congress is debating whether the US can afford that.)

Well goody for you.

Let me put it this way. Many people are never going to use CW. The work
required to learn CW is pointless. Do you enjoy pointless? I think you
should have to learn braille in order to get you license. It makes just
as much sense.

I don't know why I'm jumping in here, the old "I had to do it so you
should have to do it also" is a rather shortsighted attitude. It goes
to show that improvement of ham operators is the least of your worries,
you just worried someone might get the priviledges with less work. On
the other hand... I get the fealing that alot of CW proponents are afraid
that they wouldn't be able to deal with real competance tests. If CW went
away you might actually have to demonstrate theory competance with a
non-gimmee test.

So, is it better to keep numbers down via ancient skills that are unnecessary,
or is it better to force people to develop modern, relevant skills?

As for those that want the CW frequencies, that's fine, those people can
learn morse since it will be relevant to them. I would be all for
maintaining those as pure CW.

Roger

William,

The NIR-10 4.0 upgrade should allow you to duplicate ANY 3.0 setting,
since all the original code is still there - just with added features.
I made sure of that when I wrote the upgrade code. If you need a set
of the old v3.0 EPROMs to compare with, give me a call at JPS.

Why not have a techology filter? In fact, why have a filter at all? The answer is alluded to by your next paragraph.

>>Face it, nobody really builds their own radios any more. Look in
>>the ham radio magazines and what do you see? Answer: mega-
>>dollar ham radios. This is the only difference between a ham radio
>>operator and a C.B. radio operator.

It is that *everybody* used to behave with more decorum, until decorum and politeness gave way to PCism and everybody's right to say whatever they want, whenver they want, dammit!

This is a general societal problem (and ham radio is more or less a microcosm of society). The problem isn't solved by simply having a lid filter. Besides -- no filter is perfect. Remember Murphy's Third Law: Foolproof systems give rise to more clever fools.

>>If this attitude were pervasive, we would have penmanship tests to
>>use a state park, pie eating contests to drive on the public
>>highways and height requirements to run for elected office. The
>>code test is simply no longer relevant to operating a ham radio.
>your analogies are shaky at best.

Maybe, maybe not. It remains to be seen (just ask over in rec.radio.amateur.policy someday) exactly what benefit, if any, continued Morse training has for the Amateur Radio Service.

>The influx of poor operators since the advent of the no-code license is
>staggering. I have never heard so much foul language and obnoxious

>license classes. Anyone who truly wants a ham license will find that
>learning the code at the required snail's pace is no barrier at all...or
>am I overestimating people's abilities?

No, but if you're simply in a mood to create artificial barriers, make them *good* ones. How about jumping out of an empty oil barrel? Or ditch-digging (Gary KE4ZV's favorite)? Let's really make it a good one: each license applicant must successfully lobby the FCC to turn one of our UHF+ allocations into "amateur exclusive".

As for the lack of good operators, there has also been a lack of good elmering, especially by the W#xxx and K#xxx calls from days of old who look down their noses at the new licensees. Some attitude adjustment is called for all around.

QSL has two official usages. "QSL?" means "Do you acknowledge receipt
of my traffic?" "QSL" means "I acknowledge receipt of your traffic."
They are procedural signals intended to be used for *over the air*
message handling, nothing about postal cards or snail mail is implied.

Subject: Using DSP to emulate a TNC

Hey guys/gals/other:

I am trying to use digital signal processing to emulate a TNC for packet
communication. Right now, I'm at the very start of my research, so I'm
looking for resource information.

1) What are the best WWW locations for DSP information?
(My crawler shows quite a few, but I don't know which ones are useful)

2) Where can I find documentation detailing how a TNC operates?
I know vaguely what is in there, but I really need the details.

Feel free to respond via this thread or by direct email.
Thanks,
Vince

Subject: What does CQ mean?

I had always thought that CQ was "come quick" but it could be an "old wyfe's tail."

The distress prosign was CQD (the D stood for "danger"?)

When the Titanic went down they transmitted CQD, then tried the (then) recently adopted distress signal SOS - proported to be the
first use of SOS.

No, I don't have the references for the above. Just passing it along.

>much out there (my qth is 12 miles from Gatwick airport (in a valley :{)).

Six is becoming popular, but due to the current state of the sunspot cycle you won't find much beyond local activity except during the infrequent band openings. *Then* it can get real busy. But if you're going to restrict yourself to one VHF+ band, I'd think seriously about a 70cm or 2m SSB rig before I'd set up for 6m. That's because there are many more operators, and more enhanced propagation modes to explore, on those bands. Your "dx" won't be global in scope (unless you go for EME), but it will be more frequent and more hectic as you chase tropo, aurora, and satellites.

However, if you're patient, a 3 element beam and a 100 watts on 6 meters can give you globe spanning results when the band does open. Meteor scatter also works better here than on 2 meters. In 4 or 5 years when the sunspot cycle comes around, 6 will be open to somewhere in the world almost daily.

Gary

>email - ee95ajm@brunel.ac.uk

Well 6m is good in the summer with sporadic 'e' but e's each day
become a bit boring especially after your log fills up with italians
and balkan area people. When the DX is around you might need a bit of
power to break the pile up.....and when there are no 'e's about it's
as dead as a dodo. Until conditions improve I'd leave it as your main
band.

For my money I'd go for 2m, much more activity especially in the
South, up here in the sticks it's quiet. But you could get a rig such
as an IC251e (around 300UKP) and add an amplifier to take it beyond
the 10 watts it normally gives out. For example, with 70 watts and a
9ele yagi I managed to work down to Reading from Edinburgh last night.
Ok it was a prearranged sked but that appears to be the only way to
get a long distance qso these days.......

Cheers,

Gavin,

From: (null)

A German group leaves home today for an operation from Christmas Island as VK9XY until Tuesday the 13th of February. They then go on to the Cocos-Keeling Islands as plan activity as VK9CR between the 14th and 23rd of February. They will operate CW and SSB on 160 to 6 metres, plus RTTY and satellites.

And from Barbados, VE4GV plans to be active as 8P9EN from Thursday the 8th until the 15th of February on all bands 80 to 10 metres, mostly CW.

Next the Rally News:

The Lancastrian Rally is taking place at the University of Lancaster today, the 4th of February. The doors open at 11.00, or 10.30am for disabled visitors.

Also today, the South Essex Amateur Radio Society Radio Rally is taking place at The Paddocks, Long Road, Canvey Island. The event includes RSGB Morse Tests on demand - candidates are reminded that they will need to take the test fee and two passport-size photographs along. Doors open at 10.30 am.

Next Sunday, the 11th of February, the Northern Cross Rally takes place at the Thornes Park Athletics Stadium on the A642 Horbury Road in Wakefield, which is a new venue for this rally. The event features the usual dealers, a bookstall and bring-and-buy stand, an RSGB Propagation Studies Committee stand and Morse Tests on demand. Please bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at the rally. Talk-in will be provided on 2 metres channel S22 and 70 centimetres channel SU22, and further details can be obtained from G0FLX on 0113 238 3622.

Also on Sunday the 11th, the Cambridge and District Amateur Radio Club Rally takes place at the Ambulance Station at Addenbrookes Hospital. The event features trade stands, a bring and buy stall and car boot sale. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For more details contact John, G0GKP, on 01954 200072.

And now a date for your diary:

The RSGB National VHF Convention takes place at the usual venue - Sandown Park in Surrey - two weeks from today, on Sunday the 18th of February. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show and special interest groups. Full details are in the February edition of Radio Communication.

A new award in memory of Cyril James, G3VVB, and aimed at the home constructor of microwave equipment, will be presented for the first time at the RSGB VHF Convention. If you have an item of home-made microwave equipment and you are proud of the way you've constructed it, then why not bring it along to the Convention and enter it in the competition? The equipment can be constructed from any design, or from a kit - what the judges will be looking for particularly is quality of construction and finish. If you cannot attend the Convention in person, you may send detailed photographs and a written description to Steve Davies, G4KNZ, whose address is correct in the RSGB Call Book.

Now for the HF contest news:

The final session of the RSGB LF Cumulative is on 80 metres today, Sunday the 4th of February, between 16 and 1800 UTC. The rules were published in last September's RadCom, but please note that the dates were given incorrectly in September. The correct dates are shown in the February RadCom.

Next weekend, the RSGB 1.8MHz CW Contest takes place from 2100 UTC on Saturday the 10th until 0100 UTC on Sunday the 11th of February. The rules are in the September RadCom.

And the Dutch PACC Contest takes place on CW and SSB for 24 hours from 1200 UTC on Saturday the 10th. Brief rules are on page 22 of the February RadCom.

Next some VHF contest news:

The 432 MHz RSGB Affiliated Societies and Fixed Station Contest is taking place today, the 4th of February, between 09 and 1500 UTC.

And next Sunday, the 11th of February, the third session out of five in the RSGB 70 MHz Cumulative Contests will take place between 10 and 1200UTC. The rules for all these contests can be found in last September's RadCom.

And now the solar factual data:

The period from the 22nd to the 28th of January saw solar activity at very low levels and the geomagnetic field at quiet levels. Only one small sunspot group remained on the solar disc, and the mean was 7. Solar flux levels increased very slightly from 72 units on the 22nd to 74 units on the 25th. They remained at that level until the 28th and the average was 73 units. No solar flares were reported. Electron fluence declined slightly but remained at a moderate level. X-Ray flux remained at its minimum level of A1.0 every day. The 90-day solar flux average on the 28th was 74 units, the same as last week.

Geomagnetic activity was "quiet", with the levels down to only Ap 3 units on the 25th. The average was Ap 5 units. The aa indices, as supplied by the British Geological Survey for the period from the 16th to the 22nd of January, increased from "unsettled" on the 16th with 15 nanoTeslas recorded, to "active" levels which lasted through to the

20th, when conditions returned to "unsettled". The most disturbed day was the 17th, with 26 nanoTeslas. The average for the period was 20 nanoTeslas, which is just K3.

I'll repeat the figures: spots - 7, flux - 73, Ap index - 5, X-Ray flux - A1.0.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 19th to the 25 of January, improved every day from 5.1MHz on the 19th, to 6.7MHz by the 25th. The average was 6.1MHz. The darkness hour lows decreased slightly from 2.2MHz on the 19th to 1.9MHz by the 23rd, but then increased to end the period at 2.5MHz. The average was 2.2MHz. The daytime highs took place between 0900 and 1400 hours. The darkness hour lows took place between 0400 and 0600 hours every day. Two short periods of sporadic E took place on the 22nd and the 24th.

I'll repeat the figures: highs - 6.1MHz, lows - 2.2MHz.

And lastly the solar forecast:

This week the quiet side of the sun is expected to rotate into view and later in the week the solar disc could become spotless. Solar flux levels are expected to decline to the high 60s. Geomagnetic activity is expected to be very quiet, but later in the week activity could increase to "active" conditions. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north, but levels could decline towards next weekend. The darkness hour lows are expected to be about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Victor and G7 Whisky Alfa series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Quebec series.

>"QSL cards"!

They call themselves _CQ Magazine_, _73 Magazine_ and _QST_
too. That doesn't mean quite the same thing as those procedural
signals mean when used over radio does it? The 'Q' signals
have an ITU recognized meaning over radio, and that meaning for
"QSL" isn't postal cards. The signals can be assigned other
meanings in other contexts, but my reply was to a claim that
the international procedural signal "QSL" used over radio meant
a mailed *hard copy* receipt for the contact. It no more has
that meaning than _73 Magazine_ means _Best Regards Magazine_.
Anyone who has read Uncle Wayne's editorials knows that isn't
true.

The next cycle should peak around 2001-2002, but increased solar
activity should begin well before the peak. Things should start
to pick up by 1998. Even during the current low, there is sufficient
activity to allow enhanced propagation at times on upper HF, and
of course the lower part of HF is still working fairly normally
since solar activity even at minimums is sufficient to keep it
going.

1907. Re: CT vs. NA Contest Software--Which is better?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-04 00:00:00 UTC
From: albraun@socketis.net
Message-ID: <4f33bn$f4d@news.socketis.net>
Source record: 231044

In <31150223.170F@clark.net>, Jack Jeffery <jeffery@clark.net> writes:
>I'm planning on buying contest software soon, and have narrowed down my
>choices to two products--CT or NA. However, I'm really not sure which
>product has more to offer.
>
CT has been around longer, which is probably the reason more contesters
use it. Originally CT did strictly DX contests; K8CC developed NA, using
the same basic user interface as CT, to fill in the gap and do the domestic
contests that CT ignored. In fact, both of them started out as freeware:
I got my first diskettes of each program as freebies at Dayton a few years
ago. As time went on, however, both programs went commercial and they
started overlapping each other in terms of what contests they did. Now
they both do all the same basic contests (with each covering a couple of
"second tier" contests that the other does not), but they still use the same
basic interface with the function keys doing mostly all the same things.
However, their file formats are, and have always been, different, so that
you cannot take a file generated by one and load it into the other. Until
recently, updates to CT were available more readily than for NA, because
K1EA had a landline BBS for several years before the NA people did, but
as I understand it both programs now provide on-line updates to registered
users.

Bottom line...you pays your money and you takes your pick... there isn't a
whole lot in terms of functionality to recommend one over the other.
Just my opinion, FWIW, based on usage of CT versions 3 thru 9, and NA
up through version 7.

To All:

Here is my situation:

I recently upgraded to Tech Plus and bought an HF Rig. Kenwood
Ts-450/AT. I constructed a 10 meter dipole. The dipole is reasonant at
28.400. But, the band seems to be flat. Is it really that dead or could
I have done something wrong???? I also have a R7 I will be installing
when the weather breaks.

Any Suggestions?? Please let me know!

1910. Extra Exam question selection...

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-04 00:00:00 UTC
From: simon twigger <simont@post.its.mcw.edu>
Message-ID: <4f33h2$nhv@post.its.mcw.edu>
Source record: 231047

Hi there,

I have been looking at the Extra Class examination and I was wondering if anyone could tell me how a VEC would select the questions from the question pool to make up a suitable examination paper. For the other exams N,T,G and A, it's nice and straightforward - select one question from each subelement and there you have it. However, for the Extra exam it seems less obvious how its done.

For example, for subelement 4BA, there should be 8 questions but the subelement only appears to be divided into 7 sections (4BA-1 to 4BA-7)...so which section has two questions?

I ask because I am playing around with HTML and CGI scripts and have written a practice examination generator which works very nicely for the other four examinations but the Extra exam is somewhat older and rather less 'user friendly'! (I realise a site exists at http://w5ac.tamu.edu/ham-exam.html which does this job very well already, I just wanted to write my own, and even they are having fun and games with the Extra exam.)

If there is anyone out there who could explain the 'rules' that are used to generate this exam I would be very gratefull.

Many thanks,

Simon, AA9PW.

Reward? How much different is an Amateur License from a driver's license? We
aren't required to show evidence of "work" for the latter, we just have to
pass the tests.

>because there are people like me who demand they work for a license. Learn
>a new skill, and then use it.

Show me where, in Part 97, one is required to exert work to obtain an
amateur license.

M>Just out of curiousity, how much RAM do you have in your PC, are you
>using Windows 3.1, and how have you configured the virtual memory in
>386 enhanced if you are using Win 3.1?

I have 8 MB or RAM and using WFW 3.11. The virtual memory is configured
pretty much the way windows set it up.

M>Also, how much DOS memory do
>you have available while in Windows and what other apps are you
>running when you try to run the Callbook program? Do I sound like I
>ever do PC support? It could be the memory on your system and it
>could be the Callbook program.

I run the callbook program alone in windows. The problem only occurs
with this program. Thanks for the help but it really is not much of a
problem. The person whom I wrote the message to does not seem to run
into this situation.

BTW, what values should I plug into the virtual memory section of
windows to make it run optimally?

SB DX @ ALLBBS $OPDX.241
Ohio/Penn DX Bulletin No. 241

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 241
BID: $OPDX.241
February 4, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, NA2M, AA4NC, KK6EK, W7TSQ, N8BJQ, NW8F, WA8JOC, AH0W/OH2LVG, WA0PUJ, 4X6UO, 9K2HN, DF4RD, DL1SBF, JH1ROJ, JH3GRE, OH5BTB/OH2TB, ON6TT, PT7WA, VP2ML and ZL2TT the following DX information.

CENTRAL AMERICA DXPEDITION. Bob, W7TSQ, will operate from San Andres, HK0 from February 13-20th and will be active in the ARRL CW Contest. From February 20th through March 5th operations will take place from Costa Rica (/TI5 and /TI?). He will also be active from Honduras, March 5-11th as /HR2 and March 12-18th as /HR6. QSLs via home call and included a SASE or SAE plus postage for direct response. All others via W7 bureau ONLY!!!! ADDED NOTE FROM BOB: In addition, he has been unable to get a log from YB3OSE since the end of March 1995, so if you are awaiting a card please be patient!!

CHANGE IN PLANS. It was reported last week that Art, WA2UJH, would be active as VP2MDY from February 16th through March 1st, this has changed. Art will now be active from Montserrat February 14-21st. He has now rented a house to conduct his operations on 10-160 meters. QSL via NW8F.

CY0, SABLE ISLAND. Ken, WA8JOC, reports everything is still a "GO" for the upcoming June CY0AA DXpedition. Ken says, "We are 95% there". They have obtaining the license and landing permission, but still need help in funding (about $5000-6000). A Canadian address will be announced later for sending funds to help. Beside Ken, other operators include VE9AA and W9OEH. The team will install a 6 meter beacon on the island and concentrate on 30-6 meters, but they will have wire antennas for 40, 80 and 160 meters.

DXAC NEWS (Mt. Athos vote postponed again). Garth Hamilton, VE3HO, DXAC chairman, has postponed the DXAC vote for Mount Athos INDEFINITELY. When it is resubmitted to the committee for a vote, the option to DELETE will be omitted. The only options will be to either WITHDRAW or LEAVE it as is.

GAZA & JERICHO. With many question being asked about these two possible new DXCC countries in the future, Arie, 4X6UO (HF Manager of the IARC), reports the following information: "According to the last meeting at ITU in Geneva, unfortunatly the Palestinians in Gaza and Jericho will get a prefix from ITU only in 1997. This is according to the Oslo agreement, as long as they are an autonomy." Arie also reports there are at least two active hams in Gaza.

PY0, TRINDADE ISLANDS. According to PT2GTI, PY1UP is going to Trindade Islands for another 4 months. He will stay as a crew member of the Brasilian Navy Base. He intends to operate all bands as PY0TI. The ship will be leaving Rio during the first week of February. QSL via homecall.

QSL ROUTE. Hamad, 9K2HN, reports that his QSL route is only to: Hamad J. Al-Nusif, P.O.Box: 29174, 13152, Safat, Kuwait or by the bureau. He requests, "Please don't send any card to "HH2HM/F" because he is not my qsl manager any more!!"

TD9, GUATEMALA (SPECIAL PREFIX). After setting a new 15 meter world record in last year's ARRL DX SSB Contest, Scott Neader, KA9FOX, will return to Guatemala. This time he will attempt an all band, high power effort for the ARRL DX SSB contest March 2-3rd. Scott plans to operate from the QTH of Gerry, TG9GI and to use a special callsign, TD9IGI. Scott also plans to operate as TG/KA9FOX starting February 22 through the start of the contest from the home of Juan, TG9AJR. Scott says he has obtained a QSL manager and will announce that route shortly.

VK9CR/VK9XY, COCOS KEELING AND CHRISTMAS ISLAND (REMINDER). In remembrance of Rudi, DJ5CQ, these two islands will be activated by Joerg/DL8WPX, Falk/DK7YY, Dietmar/DL3DXX and Juergen/DL7UFN. As a yearly tradition, a group of DLs would be active from a VK9. In past years Rudi, DJ5CQ (alias VK9LM), had been the leader and organizer, but as we all know, this well known DXpeditioner and QSL Manager passed away last December. As usual the crew will take satellite equipment which was provided by DC8TS, DK5MV and DJ5MN. They hope to become active on AO-13 from both islands. The team will be active from VK9XY (Christmas Island) February 4-12th (and again the 23-24th). Operations from VK9CR (Cocos Keeling Island) will take place February 13-22nd. Activity will be on 160-6 meters with operations on the satellites, CW and SSB. QSL to DK7NP, bureau (or direct). (Refer to OPDX.236 for address.)

VK0, HEARD ISLANDS DXPEDITION UPDATE. According to three press releases put out by Peter, ON6TT, and Bob, KK6EK, the major hurdle of finding a suitable vessel for the DXpedition was acomplished. "Suitable," meaning within the budget, realistic time schedule, at least two weeks on Heard, a place for 20 team members plus cargo and no compromises on safety both on the vessel and while landing. After one month of negotiations by fax and telephone, Willy, HB9AHL, and Peter went over to Paris last Friday (January 26th) to meet representatives of the French government and to come to an agreement. They succeeded in acquiring the "Marion Dufresne" which was especially built to the specs of the TAAF/IFRTP (the French Antarctic Institute and Administration) to work in the area of Kerguelen, Crozet and Amsterdam. It is a no-compromise vessel which can sail and

work under ANY weather conditions in the polar regions. She has the most sophisticated safety features, including polar life crafts and helicopters and all needed electronics. And above all: the ship's crew has been at and on Heard Island several times, so they know the waters very well. Bob, KK6EK is updating their expedition scoping document which, in its next release, will feature a picture of the ship. Have a look at this document, which is the backbone of our operation:
http://www.ccnet.com/~cordell/HI/scoping
ADDED NOTE: Their safety does not come free. The charter costs of this vessel is $200,000 (US) including the landing and pickup. OPDX InterNet subscribers will receive an additional bulletin with a copy on all three press releases containing more details of the vessel and operators......

VO2/KB4GYT QSL CARDS. Paul, KB4GYT, states that all VO2/KB4GYT QSLs for all DX QSOs have been sent out via the bureau. He will still accept QSLs direct if you want a quicker confirmed contact. Also, he has mentioned that he has received a few QSLs for times he was not operating and is not sure if there was someone using that call or not.

VP2E, ANGUILLA. Will, AA4NC, will operate as VP2EN February 12-20th. He will be a Multi/Op entry (along with KI4HN) in the ARRL DX CW Contest. RTTY operations are planned outside the contest on the usual DX frequencies (concentrating on 80,40, and 20 meters). QSL direct w/SASE via AA4NC at the callbook address.
Also be looking for Bob, W5EUQ, and Bill, W5SJ, as VP2EEU and VP2ESJ respectively, from February 6-13th. Activity will be mostly 160-20 meters. Suggested frequencies: 1828, 3505, 3795, 7005, 7026, 7080, 14005, and 14195 kHz. QSL home callsigns.
Stewart/KC0ZC, Glenn/WA0PUJ and Loring/N0ZSU will be operating from Anguilla from February 28th to March 5th. They will be signing VP2E during the ARRL SSB Contest. QSL to KC0ZC. Outside the contest, look for VP2ES (KC0ZC), VP2EZ (WA0PUJ) and VP2E/N0ZSU. QSL via home calls.

XV, VIETNAM (UPDATE). As reported two weeks ago, JA3UB, JR3MVF and JH3GRE should be active later this week (February 9-15th). The team has now announced that they will have RTTY equipment with them and plan to look for US/EU contacts on low bands. Their callsign will be 3W6YL and QSL should go to JH3GRE. A SPECIAL NOTE FROM JH3GRE: From JA to US/EU/SA/AF a SAE+two green stamps or 1 IRC will cover first 10g by air. With one green stamp or only SAE, QSLs will go by sea mail or through the bureau.

ZL7, CHATHAM ISLAND. Barry Fletcher, G3MFW/ZS1JF, will operate from Chatham Island from February 15-19th. This will mainly be a SSB operation, and the callsign will be announced at a later date. QSL via KA1JC.
Antti, OH2BTB/OH5TB will also be active from the Chatham Islands from February 9-16th. His band/mode activities were not mentioned. QSL via OH5TB.

ZL8RI, KERMADEC DXPEDITION UPDATE. Ron Wills, ZL2TT (NZART DX Editor), advises everyone that things are going well for this Dxpedition. Ken Holdom, ZL2HU, has sent to the ARRL and ARRL DXCC DESK copies of photographs of the ship and copies of all permits and licences. Other

than finances all is now sorted out for the Dxpedition to be active on all bands and modes for a period of 11 days from May 4-14th. They have the operators and the equipment. The thing needed is the resources to hire the boat. Donations can be sent to The Kermadec DX Association, c/o Ken Holdom ZL2HU, P.O. Box 56099, Tawa, Wellington.

1996 DAYTON DX DINNER BANQUET. The Southwest Ohio DX Association is pleased to announce the Eleventh Annual DX Dinner which will be held on Friday, May 17th, 1996, at the Stouffer Renaissance Hotel, Dayton, OH. There will be a cash bar at 6:30 with dinner at 7:15. Tickets must be purchased in advance and are available from Tom Inglin, NR8Z, 4061 Eaton Rd, Hamilton OH 45013. Tickets will be $29.00. Please make your check payable to SWODXA, and send an SASE for ticket return. Seating will be limited, so please order early. If you wish to sit as a group, you must order as a group. All seats will be reserved. For further information on the dinner, contact Steve Bolia, N8BJQ, at (513) 429-9954 voice / (513) 429-0218 fax or via Internet at N8BJQ@ERINET.COM.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

1919. What's the national or CA "call" freq/?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-04 00:00:00 UTC
From: davidl@leland.Stanford.EDU
Message-ID: <4f45pq$vh@raptor1.Stanford.EDU>
Source record: 231056

Hi,

Can someone tell me what the "national call" frequency is for 2m? I don't know if I'm calling this freq. correctly but I'm told there's a freq. analagous to channel 19 on C.B. band where people travelling or on the go otherwise can make contact with others. If this frequency is different for different states then I'm interested in the freq. for California for now.

Thanks,
David

>

Oh, No.... I'm a 10 meter 15 meter person. When I first got my ticket in
'91, 10 was always hoppin'. I made alot of mobile contacts. Now it sounds
like my radio is dead. I know the solar cycle is 11 years, but I thought it
was very active for at least 8 of them. I suppose it was back in 1979 when I
couldn't even talk to a friend 1/4 mile away with a CB.. Was a constant S9+20
level of noise (many CBes) all the time. Haven't been on 11 meters for a
long time now...

1921. ECG Semiconductors INSTANT CROSS Master Guide

I'm thinking of buying a Kenwood 733A dualbander, but I'm hearing that its intermod rejection is poor. If true, that could be a problem in the Dallas area. Any comments? I'm also considering the Icom 2350 or 2700. Please reply via email. Thanks.

Just received the following msg from the Wake team:

Trip was very long. Two broken airplanes in route caused big delays but
thats OK. Better on the ground than up in air! Arrived 1.2. about 0130z
but unable to start setup till about 0400z as accomodations were not as
promised. But all worked out well and after 24 hours we now have 1
tribander, 1 WARC-Beam, a Hygain vertical and a balltecreek special up,
Needless to say we are very tired. Been 2 stations since about 0400 2.2.
mostly 40 and 80. 20 very popor. No Europe, sorry to say...

We try to cover the Wake expedition (as we did with all major DX events)
in Radio Austria International's "Kurzwellen-Panorama", the weekly radio
show for BC-Dxers and radio amateurs.

Cross-posted to: rec.radio.amateur.misc,rec.radio.info

```
Amateur Radio Newsline Monthly Information Notice
================================================

Last Revised: 12/27/95

Amateur Radio Newsline is a weekly audio service produced by Newsline,
a service of the Westlink Radio Network. Editorial comment, news
items and all other business should be directed to Bill Pasternak,
WA6ITF, Newsline's Producer and Editor-In-Chief.

E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com
Phone/Fax - +1 805 296-7180
Fax senders should wait for voice prompt, then press start.

The transcribed version is produced by Dale Cary, WD0AKO from
materials provided by Newsline. and is jointly distributed to online
services and bulletin board networks by Steve Coletti and Dale Cary.

All others are asked to not post Newsline to any BBS or network
without the permission of Steve Coletti. There have been distribution
problems with many of these networks recently and posting Newsline to
an echoed conference because you haven't seen it there doesn't mean it
hasn't already been seen elsewhere. Reposting causes wasted bandwidth
and additional telephone charges to be incoured by the sysops of these
volunteer networks.

The copyright owner of The Amateur Radio Newsline is Newsline.
Permission to reuse all or part of either this written, or the audio
form requires that the item be taken in it's entirety, not be subject
to any further editing or commentary, and that full credit is given to
Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio
version in it's entirety over nets or repeaters. The text version may
be used for packet distribution as long as it is sent in its entirety
and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in it's full form over voice or
digital forms of Amateur Radio, it is recommended that the closed
circut advisory be deleted. Audio, Computer, and Packet
retransmissions must be made without the editing or deleting of any
other part of the Newsline content. Unauthorized additional
commentary to the original message is also prohibited. To do so is a
violation of copyright and subjects the initiator to legal action by
Newsline.
```

Newsline may also be excerpted for code practice transmissions, and
may be used as a reference source in bulletin board discussions under
acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of
Newsline.

Subject: Call Letters Now-a-Days.

Motu Iti asked:
>1) Are call letters still being issued by numerical
>region "2" being NY etc?
Answer: Yes.
>2) Does the FCC fill in with old call letters
>(W2, WA2) as they expire?
Answer: No
>3) Can you tell the license grade by the letters?
Answer: Not really. There is a scheme at the time of first
license,which (for the mainland) goes like this:
--Novice: 2x3 calls assigned, such as KB2XYZ
--Tech, Tech+, and General: 1x3 calls assigned, such
as N2XYZ
--Advanced: 2x2 calls (except none start with "A")
assigned, such as KB2XY.
--Extra: 1x2 or 2x1 calls assigned, such as N2XY or
NX2Y. Also 2x2 calls starting with "A" such as AB2XY.
This scheme gets diluted because you can keep your call
when you upgrade. Thus KB2XYZ who got that call as a Novice
can keep it all the way to Extra. Also, some blocks are "used
up" and calls from lower groups are being assigned. For
example in most areas the 1x3 calls are all gone so new
Techs, Tech+s, and Generals are being assigned 2x3 calls.

If the FCC would accept my old 2nd Class Scout certificate as a 5WPM
CSCE... I guess it's more than a year old though, and I topped out at
"STAR" and only Life and Eagle are for life, so I guess it doesn't count

:-)

> since we've had a code free ticket since 1991, and there's about 150,000 folks
> in that group, you can't say for sure that all hams can copy.

And who knows how many of the old-time rag-chewers have copied anything since
their last exam. Are more old keys becoming silent keys than Tech-'s
upgrading? Don't know. Total number of hams _is_ climbing, but the pool of
key-bangers (not counting people doing CW via MFJ/AEA multimode
controllers!), what are known in some circles as "Real Hams",
could be declining.

> you haven't been in
> touch with most boy scout groups if you assume that boy scouts can copy
> code..

According to a Ham I heard griping on 2m, the Boy Scouts no longer require
morse or semaphore; you can pick ANY code you want. I guess I could pick
ASCII. :-) (Or EBCDIC??? :-()

>copy his own dowlink signal

Friends,
Please correct me on any bad newsgroup etiquette, I am not sure
when its appropriate to express myself..

As to the alligators on the sats, I have only been working the birds
for a year and I must say overall most of the operators show a great
deal of class.. However one of the first things I discovered is the
great need to have the best recieve as you possibly can. I do the
best I can, but occasionally the station I am working will give me
a 5-7 or so signal report even the my downlink sounds like its in the
mud.. I learned to cut back at that point realizing that I have no
way of knowing how much metal is pointing at the sky on their end.
I agree about the beacon also on 13.. but judgement on 10 should be
used..

I enjoy fo-20 work as well, and that that is where your point really
is driven home.. I have heard cw operators just killing the downlink
to the point that you can hear the chop chop in the rest of the qso's
on the bird.. I experimented with a little cw on both fo-20 and ao-10
and was quite amazed at how little power produced a decent downlink..
5watts produced an echo on ao-10 when it was all I could do to hear
my downlink with 90watts ssb..

From: gars@afn.org (Gainesville Amateur Radio Society)
Subject: ANNOUNCE: ARRL Workshops and Forums in Florida

The following are four (4) announcements about various ARRL workshops
and forums in the next month in Florida

****

ARRL Technical Workshop
"Computer-Aided Antenna/System Design in HF/VHF Stations Including the
Effect of Local Terrain"

by Dean Straw, N6BV - ARRL HQ Sr Asst Technical Editor

Friday, February 2, 1996 - 12:00 noon to 5:00 pm
Miami Airport Marriott

Discover the "System Approach" to the design of antennas -- learn
about propagation, antenna selection, transmission line selection and
putting it all together.

This workshop will demonstrate computer modeling and analysis of HF
systems plus VHF Yagis and other gain antennas. You'll do hands-on
testing of antenna designs, including crude field-strength
measurements. You'll explore the effect of local terrain and
environment on the elevation pattern for antennas, and see the launch
angles required for efficient HF propagation to the world.

The charge for 5 hours of workshop, instruction and the accompanying
workbook is $15 for ARRL members and $20 for non-members. You may

also purchase the "ARRL Antenna Book" (the 736-page 17th edition includes IBM-compatible software for Yagi analysis by 3 authors) for $30 plus $5 shipping.

To take part, give your name, call sign, address and check or credit card number to: Rosalie White, WA1STO, at (860) 594-0237 or send to: ARRL CAD Workshop, 225 Main St., Newington, CT 06111.

Space is limited; respond by January 24. Those who attend for all 5 hours will earn .5 Continuing Education Units.

****

What: Youth Forum - for those who are 16 and under

Where: Miami Tropical Hamboree - Miami, FL
Dade County Youth Fair & Expo Center

When: Sunday, 4 February 1996 - 2:30 pm

Who: Youths (licensed and unlicensed) 18 and under get in free with a student pass from schools; age 10 and under get in free with an accompanying adult.

Why: You'll take part in hands-on demonstrations. You'll meet young people who will talk about their exciting on-the-air activities.

***

What: Educator's Forum - School teachers, volunteer instructors, recruiters

Where: Miami Tropical Hamboree - in the Tower Building at the Dade County Youth Fair and Expo Center.

When: Saturday, 3 February 1996 10:30 - 11:30 am

Why: Educators will talk about their successful teaching techniques. You 'll take home free materials.

See you there!
Sponsored by ARRL Educational Activities Dept.

****

What: Educators Forum

Where: Orlando Hamcation - Orlando, FL

When: Saturday, 17 February 1996 - see convention program for time

Why: Teachers will talk about what works in their classrooms. You'll take home free materials.

Spread the word!
Sponsored by ARRL Educational Activities Dept.

Subject: No Theory...was Re: No Code = No Brain

In response to Bill Sohl, who writes:
>Well if that is the sum and substance of those pushing
>lower theory testing, then your assertions in this venue
>that put an implied equal weight on it are totally off the mark.

As stated to Bill DuBroff, that ISN'T the sum and substance
of those pushing for change. And whether we assign "equal weight" or
not has no bearing whatsoever on this issue. ORACLE, with
the sum total of only six people, was able to advance the
no-code HF proposal. I submit YOU have missed the mark, Bill.

>For the sake of this discussion, I think it is safe to
>say that NO ONE has suggested in this USENET
>arena that we should lower or eliminate theory testing.
>Additionally, even if you can point to one or two individuals
>that have, you know very well that it is an extreme minority
>viewpoint that isn't shared by the vast majority of
>hams on either side of the code/no code issue.

As for what is a minority or majority is up to conjecture. The
statements have been made, and that indicates possible trouble. As
for the sake of this discussion, your pointing to people
on Usenet skews the issue. My comments regarding easing theory
tests had to do with Fred Maia and others, not necessarily
specific participants to the Usenet. Again, as stated to DuBroff,
the be all and end all of discussion on this issue doesn't reside
solely with Usenet.

>Restoring what code exams? Are you now saying the
>no code tech license should be eliminated?

Not at all. Where do you reach that conclusion? This has to
do with HF code requirements, and one minute solid copy, versus
a multiple choice test, which can be passed by pure luck.

:Otherwise, one comes to the inescapable (and correct) conclusion
:that there's a movement to ease requirements into the Service,
:period. Note carefully also there are others who are questioning
:the value of exams in general, right on this discussion group, so
:again, one cannot declare "no one is pushing for easier theory
:requirements."

>Who and how often? I restate my comments above.

Many, and very often, as one can see by going through the
postings over the past month or two, just on Usenet alone. Have
you also monitored the HF/VHF bands lately? Where have you been?

:The problem with the eased requirement scenario is that it
:has yet to be shown that eased requirements would be
:beneficial to the Amateur Service.

>This is only an issue if there is any movement to ease
>requirements (other than the CW). Otherwise, this
>is just a diversion on your part from the basic question
>of code/slow code/no code debate.

Eased requirements have ALREADY taken place by means of
rote-memorized theory exams and multiple choice cw tests. The

key is to restore the condition where one must learn to
apply basic material, not simply memorize it.

:If Part 97.1 is to remain a viable component of the Amateur
:Service, easing of requirements does not fit in.

>Changing requirements does not need to simply translate
>into easing requirments.

Perhaps, but that's the way it's gone!

:If, on the other hand, ARRL and FCC wish to declare the new
:purpose and goals of the Amateur Service, it would be more
:professional of them to do it now, and get on with rebuilding a
:new Service.

>No one in this newsgroup seems to be suggesting this
>as a possibility other than yourself. The sky is not falling.

One wouldn't know if the sky is falling or not for the Amateur
Service, versus a personal radio service. The FCC is fairly
inactive these days, and no one seems to know what their
agenda is for the amateur service in the long run. It's time
we found out.

:In that way, at least, no one operates under false pretenses.
:The new challenge then becomes justifying one's frequency
:allocations under the new rules of the game.

>Or it isn't an issue if none of the above is true, which is
>exactly what I'll assert here.

You can assert what you wish, but now you'll have to SHOW it.
While you're figuring it out, there's no reason to become unglued
because there are those of us who simply want to mind the fort.

As I have stated before, I am completely in favor of a stronger theory exam. Especially one which would include questions relevant to amateur radio in the 90's...packet, digipeters, satellite communications, proper repeater operation, etc. Wouldn't that make more sense than testing to see how many electronic sound pulses per minute that one can copy?

From: one4zion@aol.com (One 4 Zion)
Subject: New Web Site on Banned AIDS Book

FOR IMMEDIATE RELEASE

"Censorship Bypass" Web Site
Address: http://www.kaiwan.com/~bypass
Contact: AIDSCENTRL@aol.com

NEW WEB SITE ABOUT BANNED AIDS BOOK
Feel free to distribute this press release!

The United States government hopes you will never read the book "Why We Will Never Win the War on AIDS," by Bryan Ellison and Peter Duesberg. And, if the government has its way, you will never even know the book existed.

On December 29, 1995 - just two days before the new year - a New York Federal court issued an order that all copies of the book be destroyed. This latest order followed on the heels of an earlier order, by the same judge, banning the book from distribution anywhere in the United States or Canada - even for free.

Although he legally cannot distribute the book anymore (pending appeal of the decision), author Bryan Ellison is determined to alert the public to this blatant cover-up. "Until this lawsuit, most readers didn't know what to think about the startling AIDS controversy presented in the book," he said. "But now people are beginning to say, 'there must be something to this.'"

Nor is Ellison alone in his activism. Nationwide, hundreds of angry citizens are quickly banding together to form a grassroots movement to expose the war of censorship by the AIDS establishment. This growing voters' rebellion was sparked by the lawsuit to suppress the Ellison/Duesberg AIDS book, and is a reaction to the heavy-handed tactics used to silence dissent.

Already, this movement has spawned the "Save The AIDS Book" Legal Defense Fund, which is sponsoring a new home page on the Internet. Computer users can now access the "Fabricated Epidemic" page at the "Censorship Bypass" world-wide web site, where they are finding information on the AIDS cover-up, late-breaking news on the legal status of the book, and special previews of newly-released government documents and other eye-opening

materials.

What makes the Ellison/Duesberg AIDS book so hotly controversial? Ellison and Duesberg belong to the ranks of hundreds of top scientists, including Nobel Prize winners and members of the National Academy of Sciences at major institutions worldwide, who now believe that the Federal government has blamed the AIDS epidemic on the wrong cause. The HIV virus, blamed in 1984 as the official cause of AIDS, is actually a harmless germ against which the government has wasted over forty billion dollars in research and prevention, say these scientists. In their book, Ellison and Duesberg present evidence identifying the real cause of AIDS, and warn that the government is placing millions of Americans - including babies - in dire risk by refusing to warn the public about the truth. Worse yet, the book documents a systematic, nine-year campaign by the AIDS establishment to silence these prestigious dissenting scientists.

"If the public would find out about this disastrous mishandling of the War on AIDS, tens of thousands of government-funded scientists and gay rights organizations would lose their funding overnight," says Ellison. "That's why they have to stop our book, and that's why we can't let them silence us."

The "Censorship Bypass" web site has just come on line, and will soon feature internal government memos and other documents never before seen by the public. It will also provide important advice on the real prevention of AIDS - which is radically different from the government "party line."

Supporters and organizers of the "Save The AIDS Book" Legal Defense Fund expect this web site to help build public momentum for an official Congressional investigation of this AIDS scandal.

The "Censorship Bypass" web site address is:
http://www.kaiwan.com/~bypass.

Boy, oh boy. I thought I was the only one that felt like that.
I guess the trend will be to not only include an SASE and a $1, but we
should also pay (in advance, I am sure) the cost of the electricity to
operate the other ham's station. Then, our share of the depreciation on
his station. Let's see.... $4800 (rig) + $1200 (antenna/tower), useful
life 6 years, 5 contacts per month (can't over due it now). I guess we
should send an SASE along with about $47 in cash (no check, of course).

What ever happened to friendship. Are some of us in this for the money???

Come on, lets enjoy this as a hobby.

: be full with contesters looking to make a CQ.
:
: KE4IKT
:
:
In general there are enough listeners out there on any particular satellite pass that calling CQ will get you a contact. The birds are congested enough that finding a quiet spot on the more popular ones (e.g. RS-10/11) is hard to do. Adding extra traffic with a satellite-focused contest would overload them such that you'd probably have *less* chance of making a contact.

On top of all that, add in the temptation that contests bring to bump your power level and elbow your way onto the bird, and you'll end up with what I heard a few years ago during Field Day. Someone with a very strong signal kept calling CQ CQ CQ and his call sign 3-4 times, over and over, waiting a bare fraction of a second between each call. Since this was on AO-21, an FM bird (one QSO at a time), all he did was monopolize the entire pass with his calling. He never did make a contact, nor did anyone else.

A Satellite-focused contest would be an interesting experiment to see how our Amateur satellite fleet handles extreme overload, power management, battery failures, and other such things, but I'm not sure it'd be worth it.

If you want to have some long distance chats with a Tech license, satellite communication is the way to go, but you don't need or want a contest to "help".

I vote NO.

Greg KO6TH

From: gerryc@airmail.net (Gerald Crenshaw)
Subject: DC connectors and wiring

ARRL Field Service, and Dallas RACES DC Connector Standards

The DC connector as recommended for Dallas RACES is the same as the one that ARRL Field Service recommends, the 2 pin Molex connector with .093" pins for DC.
The drawing for this connector configuration can be found in the ARRL hand book.
Having a standard connectors for DC and antennas and audio has proved it "worth" time after time during tornado and weather situations.
During the emergency communications efforts after the Lancaster tornado, lots of amateurs who were non RACES, volunteered there equipment to help. Because of the variety of connectors much of it could not be used during the first few hours of the effort. There simply was not time to modify the equipment during the initial effort.

Amperage Rating

Some people will argue that ARRL field service people "blew it" and this DC connector is not good for High Power (50 to 70 watts) 2 meter rigs as the connector is rated at 8 Amps. Please note that Radio Shack was very conservative with manufacturers ratings. This connector from Molex is actually rated at 12 amps.
The connector was tested by my Employers Quality lab at 13.8 V at 10 amps. After 50 connect/disconnect cycles the drop across the connector was 50mv at 10 amps, and after 200 connect/disconnect cycles the drop across the connector was 57mv at 10 amps. This connector will withstand a whole lot abuse and still work considering the "intermittent duty" nature of most mobile radios.

Parts and Part Numbers

This connector can be found by the Radio Shack part number 274-222.
This part number is a kit that contains 1 each male and female shell and 2 each male and female pins.
AMP and Molex make identical connectors that are directly interchangeable and in fact carry the same part, under identical part numbers. For those wishing to buy in bulk, the AMP/Molex part numbers are:

Male shell 03-09-2021
Female shell 03-09-1022
Male .093 Pin 02-09-2103
Female .093 Pin 02-09-1104

Each year after the National Weather Service "Skywarn" school we have a "connectorizing party" to introduce new RACES members to the connector standards and to help any who might be having trouble getting there radios standardized. This is done for the price of the connectors or they can provide there own.

Crimping or soldering

Our tests on this connector showed that most of the failures on this connector came not from the connector itself, but from improper field crimping. The failed connectors we tested failed because of crimps made with "any tool available" rather than the crimping tool recommended by AMP/Molex. The improper crimping caused arcing with the associated carbon contamination. Further tests showed that even improperly crimped connectors performed to spec. or better if soldered. For this reason in Mobile applications, CRIMP and SOLDER.
There is a NASA specification that calls for connectors to be "crimped when possible". It should be noted that this specification also covers the manufactures crimping recommendations and tooling.

Wire

Another failure mode that was noted was not from the connector but from the wire used with the connector. For Mobile applications 18 AWG (American Wire Gauge) is rated for 14 to 18 amps. Lamp or extension "zip" cord is rated in the 12 to 14 amp region.
18 AWG stranded wire is found in most any automotive parts store. Suppliers such as Radio Shack do not carry this size wire. Many of the failures came from people "one stop shopping" using smaller wire or solid wire that R'S. carried rather than purchase the larger "automotive" stranded wire.

Insulation and Strain Relief

After recommended crimping, you can add both extra insulation (to prevent fraying) and strain relieve at the same time with the addition of heat shrink tubing. Insulate both conductors with a 2 inch length of heat shrink per conductor. Make sure that the crimp part of the pin is covered with tubing. Shrink the tubing. After this is done, pass both insulated conductors through a slightly larger diameter of shrink tubing. A length of about 1.5 inches seems to work well, Place both of the conductors in the shell and seat the pins, slide the larger heat shrink down to

connector shell, then shrink. Among other things this gives the connector a professional "finished" look.
The strain relief part from Molex works very well but is hard to come by in small quantity and is expensive. This compromise has worked well. Adding this insulation modification to an already assembled connector is possible with the "extraction" tool available from AMP, Molex and Radio Shack.

Using the larger "Heavy Duty" 20 amp connector from Radio Shack

Again for those who argue that the 8 amp connector is to small, Radio Shack also carries a larger, heavy duty connector similar to a Molex. (Female connector and Pins 274-154, Male connector and Pins 274-151). Besides the larger pins and current capacity, this connector has a very nice "positive locking" latch molded in the nylon. These larger connectors seem to be in favor with the amateurs who like Mobile HF work. Additionally, these connectors can accommodate a much larger wire size. 10 to 14 AWG. Again Radio Shack was very conservative with their ratings on this connector.
For those amateurs who use these connectors as their "standard" in the Dallas area, they also carry an adapter to convert this connector to the ARRL/Dallas RACES standard.

Existing Original Equipment Manafactures (OEM) Connectors

Many amateurs do not like to modify there equipment from the manufactures connector. They prefer to leave there equipment "original" as this aids in resell value. Again all that is required for the standardization scheme, is to have an adapter available to convert to the standard.
The OEM connectors do not have to be replaced, simply adapted to the standard.

I work contests _only_ to bag new country/band/mode combinations,
and stick to the game plan during the contests (ie. no rag chewing).
I QSL virtually all the contacts I make during the contest. I think
it's fair to expect cards in return, as long as you include return
postage and SAE. This applies to _all_ QSL's. We're entitled to
the card, but not necessarily the postage or the addressing.

There are a few repeaters in southern California that use "odd" splits (each one has a different I/O spacing), but for the most part new systems stuff themselves onto existing 600 KHz spaced channels. Not many new systems considering how stuffed the band is here already, but use of CTCSS access (PL) helps a lot.

From: david_b3@sfov1.verifone.com
Subject: Advice Wanted on Buying 2-Meter Mobile Rig

I'm in the market for a 2-meter mobile rig, and want to know anybody's thoughts on the following scanarios:

1. Buy a new, basic Kenwood/Yaesu/Icom, which I can get for around $270-300. One year warranty. Reliable gear, but after the warranty runs out, potentially high repair bills (my 3-year-old Alinco DJ-580T HT has been in twice for repairs since the warranty ran out).

2. Buy a new Radio Shack HTX-212, which I can get for $299, with an optional 5-year warranty for like $40-50. Not as good as the Kenwood/Yaesu/Icom rigs, but I won't have to shell out additional bucks over the next 5 years.

3. Buy a used K/Y/I rig, which would be cheaper, but if anything goes wrong, potentially big repair bucks.

4. Buy a used RS HTX-212 rig, for which you can still get a 5-year warranty, if it was purchased recently.

Money IS an issue, and I'd like to get the best rig I can for the least investment over the next 5 years.

ANY and ALL advice is appreciated!

From: jamesm@sw2.canberra.edu.au (Jim Muller VK1FF/WB2FFY)
Subject: Alaskan Counties

I'm working on the USA County Award and need some help with the Alaskan counties. The county hunters book I have lists the counties as 1st District, 2nd District, 3rd District, and 4th District. However, my Funk & Wagnalls Hammond World Atlas lists the four areas as Northeastern, Central, South Central, and Southeastern.

Out of all the KL7 QSLs I've received only one has the county printed on it....so I'm pretty sure 3rd district = South Central.

Any help would be appreciated.

The answer is no farther than Part 97. You'll find the only amateur radio
gear requiring type acceptance are exernal power amplifiers for use below
144MHz (97.315, 97.317).

Maybe in the U.K. (I don't know), but the FCC rules only specify that
external power amplifiers for use *below* 144MHz require type acceptance.
Look at 97.315 and 97.317.

>had multiple VXOs. The only dirtier rig I've owned was the Regency HR-2.
>And at least it didn't drift, the Clegg did. It was certainly a novel
>radio for its time, but not something I'd want to put back on the air
>today.

Hi all!

I have also owned the Clegg FM-27B and reflect the same problems with
its spurious output. I also had severe intermod and overload promlems
on receive, as well. It was a novelty radio to own, though, in a day
when most radios were crystal controlled and had only 6 to 12 channels.
If I remember correctly, the Clegg also was one of the few that put
out a full 25 watts in a day when 10 watts was the norm for most rigs.

As far as the Regency, I have never owned an HR-2, but I still own an
HR-6, 6 meter rig. Those radios have the most un-stable transmitter I
have ever seen. You can keep the spurs down if you tune the transmitter
on the frequency you intend to use most, into the antenna you will be
using. Don't change frequencies, though, because you will throw spurs
all over the band!

I operate on 52.525 Mhz with this radio, and if my mobile antenna gets
wet, causing the SWR to rise, The transmitter goes nuts and I start to
bring up a repeater that has its input on 51.80, almost 2 miles away!
Now thats a sloppy transmitter!!!

I would like to see more stories relating to the classic radios going back
to the days when repeaters were just becoming popular----back in the
days when you were lucky to have 10 watts, a Ringo, and 6 channels.
It would be much better reading than all of the mud that is being slung
back and forth on this newsgroup!

Hmmm, well in rec.radio, maybe that works. But I'm not sure that'll make a good battle-flag here in a.s.d! Besides, some of us have developed a bizarre fondness for Burt. (Hey, I read Dilbert, too!) Years ago I used to have a pet black rat snake I was sorta fond of, too. He smelled funny, but he was great for getting rid of dead mice...

And aside from some of the personal attack flame-wars, *some* of Burt's inanities stimulate thought and replies, which isn't always a terrible thing.

For ROUTINE renewals, you don't use the 610 anymore, Robert. Yes - I know - it surprised me, too. Mine expires in March. FCC sent me a simple form many weeks back, which I signed to acknowledge that I wanted it renewed, and sent it back. They sent the form without being asked. Nice to have the feds doing something right!

If your address is still good in their files, you probably will get that form soon. If not you will then REALLY need a 610 to change the address!

From: Kevin Schmidt <kschmidt@ihnp4.ucsd.edu>
Subject: Requesting contest QSLs [was QSL etiquette]

I have read the "To QSL or not" topics. I personally reply to
all QSLs received. I also find it hard to believe that anyone, who has
time to get on the air, is too busy to write "confirmed by W1ABC", sign
the card they received, and stick it in the supplied SASE. But if
someone wants to toss away all the QSLs and SASEs he receives that's
his right. It is amusing to hear a contester suggest that he expects
operators to ask, during a contest contact, if he will reply to a QSL
request. I can see it now instead of something like this. (BTW, In my
imagination, this is in morse, and op1 is sending 35 words per minute
and op2 is sending 15 wpm.)

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY
op1: tu cq test de w1abc

I now realize that at least one contester wants:

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY and by the way, I really need Maine to finish my WAS
if I send you a card with an sase would you be willing to send
me yours k
op1: r no k
op2: ok 73 w2xyz
op1: cq test de w1abc

This may reduce the qso rate somewhat for op1, but now that I know
what's expected...

From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: <<FREE WWW Ham Radio Classified Page with Search Engine>>

The Raymond Sarrio Company9s Ham Radio WWW site is proud to announce a
FREE Ham Radio classified advertising page at
http://www.csz.com/sarrio.html. This new classified page will allow Hams
to find equipement with the help of a search engine--no need to scroll
through 1009s of listing before you find that special piece of gear. Plus,
when you find the gear you'er interested in, you are also provided with
easy point-and-click e-mail access, directly to the Ham that listed the
item.

For those Hams with gear to sell, take note! there is NO charge to list
your equipment within Ham Classifieds, and there will be no posting time
delays. Your posting(s) will go on-line in our classified search engine
in about 1 hour. All you need do is fill out a simple forms page, and upon its
(point-and-click) submission your 3For Sale2 classified is immediately
on-line.

I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.

Give it a try, and let me know how you like it (we are still beta testing)
739s Ray

Don't count on any sites carrying those alt groups. Here at UH we're
already max'd out at some 10,000 groups.

I guess throwing up a new repeater that duplicate coverage 10-fold isn't
enough to feed one's ego anymore - now one has to resort to creating
alt newsgroups... (Watch that blood pressure!)

From: David Hough <dave@llondel.demon.co.uk>
Subject: GB2RS News 4th February 1996

Good morning. It's Sunday the 4th of February and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The RSGB responded quickly to reports on radio and TV, and in newspapers, about the Duke of Edinburgh's phone conversation being taped by "a radio amateur" or "radio ham". A press release was sent to all national newspapers and to radio and TV stations stating that "there is no evidence whatsoever" that the telephone conversation was intercepted and recorded by a licensed radio amateur. The individual named in the newspapers as taping the Duke of Edinburgh's phone conversation is not a member of the RSGB and it is firmly believed that he does not hold an amateur radio licence. The RSGB press release also pointed out that equipment capable of receiving analogue mobile phones is widely available and may be purchased quite legally by anyone.

The RSGB General Manager, Peter Kirby, G0TWW, was also interviewed by Independent Radio News, Associated Press, Sky TV News, and Channel 1 Cable TV on Tuesday and Wednesday over the matter.

A new 50MHz GB2RS news broadcast serving Central Scotland is starting today, the 4th of February, at 11.30 am. Initially, it will be for an experimental period of three months but will be continued if it proves to be a success. The transmission will be from the station of Tom Menzies, GM1GEQ, and will be on 51.530 MHz with vertical polarisation. Reports will be welcome, and should be sent to GM1GEQ via the RSGB QSL bureau.

The Barnsley and District Amateur Radio Club is co-ordinating a coach trip to Friedrichshafen in June on behalf of the RSGB. The Friedrichshafen 'Hamfest' is Europe's largest amateur radio exhibition. The coach will depart on Wednesday the 26th of June and return on Tuesday the 2nd of July and pick-ups can be arranged at pre-determined locations en route. Places are allocated on a first come, first served basis so contact the organiser, Ernie Bailey, G4LUE, without delay. He is available on 01226 716339, or 0836 748958, between 6.00 and 8.00pm.

There is a new QSL Bureau Sub-Manager for the GM0AAA to LZZ series of callsigns. He is Fred Roe, GM0ALS, and his address is 8 South Gyle Gardens, Edinburgh. The postcode is EH12 7RZ. The address may also be found in the RSGB Call Book under GM0ALS.

The Radio Amateur Invalid and Blind Club Northern Ireland Area is holding a flag day collection in the Ballymena town centre shopping complex on Friday the 9th of February between about 10.00 am and 9.00 pm. Anyone who can help for a few hours should contact David Caldwell, GI0HOW, on 01232 471370, or send a fax to him on 01232 471980, to arrange times and identification permits.

On Saturday the 10th of February, the Lincoln Short Wave Club is celebrating its 75th anniversary. The club was formed as the Lincoln Wireless and Scientific Society in 1921. There will be an exhibition and special event station at the Lawn Complex, Lincoln, from 12 noon until

5.00 pm, with a celebratory dinner in the evening. The day's events will be opened jointly by the Mayor of Lincoln, Councillor Geoff Ellis, and RSGB President Peter Sheppard, G4EJP. For further details of this, or the club's other activities, please contact John Middleton, G8VGF, on 01522 525760.

The annual Guides 'Thinking Day on the Air' takes place over the weekend of the 24th and 25th of February. A pack is available from RSGB HQ consisting of a list of participating special event stations and details of the countries which permit third party Greetings Messages during this event. Groups using a GX or similar prefix instead of a GB call are asked to contact Mrs Eva Telenius-Lowe at RSGB Headquarters by this Friday, the 9th of February, in order to be included on the list of participating stations. If you would like the pack, please send an A4-size self-addressed envelope, with 38p in stamps, to Eva at RSGB HQ.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

>the radio . . .
> Jeff Shelton/KS4TL

Fact is the company who made the relay for ICOM in Japan went out of business several years ago. Before that happened ICOM tried to forcast the requirements for the relay for the next 5 years. Thye used them up in the 9 to 10 years that have passed since that time.

>5000 lbs of lift required. As you can see, hot air is not going to cut
>it!

That's a rather incredible amount of lift for a weather balloon (which
of course *isn't* a hot air balloon anyway). I don't know where you're
getting your figures, but 350 pounds for 500 feet of #14 is absurd (it's
also 75% of the yield limit of the wire, so it wouldn't take much catenary
loading from the wind to exceed the limit). 500 feet of bare 14 gauge copper
wire only weighs about 6.25 pounds. That's too much load for a 10 foot Wx
balloon, of course, but you'd use something a bit thinner, say #22, which
would only weigh a pound for 500 feet. It'd break in a 24 MPH gust, though.

And I guarantee that if there is any wind at all, that balloon is going
to lay out along the ground instead of standing overhead. With a 10 foot
balloon, #22 wire, and a 15 MPH wind, that corresponds to a slant angle
of about 84 degrees off zenith. With very light breezes, the balloon may
stand as high as 45 degrees off zenith, but it would have to be dead calm
for it to approach zenith more closely than that. A lifting body, however,
like the advertising blimps, can be set to rise into the wind, and they can
approach zenith fairly closely, to better than 30 degrees off zenith. The
angle from zenith corresponds to the sum of the tangents of the vector
forces at work.

>For some reason everyone is thinking Wagner is stupid. We have talked in
>mail about this in the past. I think that he has a good idea, and with a
>lot of planing his club will do just fine.

I don't think he's stupid. I just think he doesn't have experience
with tethered balloons of this nature, and that he hasn't done the
math to see what angle the forces involved will yield. There are
three primary force vectors, lift, gravity, and wind loading. Those
are tied together by the catenary of the wire to yield the angle of
repose for the system. All the data you need is in the CRC Handbook.

If you've got a *lot* of excess lift, you can pull the wire more nearly
vertical for a given wind speed, but a lot of lift corresponds to a
large balloon, and that has a correspondingly large frontal area to
present to the wind, so the vectors still lead to a large angle off zenith.
The advantage of the lifting bodies is that they can supply lift *without*
a corresponding increase in frontal area, so they can reduce the angle
from zenith a lot more. Unfortunately, that puts more stress on the tether
too, so you have to go to a larger gauge, and that adds weight. It can be
a vicious circle.

If he lays out 2,000 to 10,000 feet of wire, he's creating an incredible hazard if it gets away from him. The odds of it all coming down where it'll miss a power line are pretty slim. Though for a Wx balloon to lift that much he's going to have to use #30 or smaller, and it'll just vaporize when it tangles with the power lines (automatic fuse). (And it'll break under it's own weight and wind loading before it reaches full height anyway.)

Now there is another way. If he uses a large (manned) hot air balloon, he can three point tether it with heavy steel cable and just hang the antenna wire vertically below it. That may be what you're thinking of. He's not going to reach 2,000 to 10,000 feet that way, however. Something on the order of 300 feet might be possible before stresses on the central tether connection to the balloon get out of hand during wind gusts.

(Of course he could use a *huge* tethered blimp, such as TV Marti uses, and reach 10,000 feet, but I doubt he can afford that, Congress is debating whether the US can afford that.)

Yes ... but not without problems.

I posted a WTB in alt.ham-radio.am last week, and it duly appeared.
Since then there've been no other postings in that ng.

I sent the WTB posting again last night and it got bounced back by
my ISP as 'No valid newsgroups specified'

Well goody for you.

Let me put it this way. Many people are never going to use CW. The work
required to learn CW is pointless. Do you enjoy pointless? I think you
should have to learn braille in order to get you license. It makes just
as much sense.

I don't know why I'm jumping in here, the old "I had to do it so you
should have to do it also" is a rather shortsighted attitude. It goes
to show that improvement of ham operators is the least of your worries,
you just worried someone might get the priviledges with less work. On
the other hand... I get the fealing that alot of CW proponents are afraid
that they wouldn't be able to deal with real competance tests. If CW went
away you might actually have to demonstrate theory competance with a
non-gimmee test.

So, is it better to keep numbers down via ancient skills that are unnecessary,
or is it better to force people to develop modern, relevant skills?

As for those that want the CW frequencies, that's fine, those people can
learn morse since it will be relevant to them. I would be all for
maintaining those as pure CW.

William,

The NIR-10 4.0 upgrade should allow you to duplicate ANY 3.0 setting,
since all the original code is still there - just with added features.
I made sure of that when I wrote the upgrade code. If you need a set
of the old v3.0 EPROMs to compare with, give me a call at JPS.

It is that *everybody* used to behave with more decorum, until decorum and
politeness gave way to PCism and everybody's right to say whatever they
want, whenver they want, dammit!

This is a general societal problem (and ham radio is more or less a
microcosm of society). The problem isn't solved by simply having a lid
filter. Besides -- no filter is perfect. Remember Murphy's Third Law:
Foolproof systems give rise to more clever fools.

>>If this attitude were pervasive, we would have penmanship tests to
>>use a state park, pie eating contests to drive on the public
>>highways and height requirements to run for elected office. The
>>code test is simply no longer relevant to operating a ham radio.
>your analogies are shaky at best.

Maybe, maybe not. It remains to be seen (just ask over in
rec.radio.amateur.policy someday) exactly what benefit, if any, continued
Morse training has for the Amateur Radio Service.

>The influx of poor operators since the advent of the no-code license is

>license classes. Anyone who truly wants a ham license will find that
>learning the code at the required snail's pace is no barrier at all...or
>am I overestimating people's abilities?

No, but if you're simply in a mood to create artificial barriers, make them
good ones. How about jumping out of an empty oil barrel? Or ditch-digging
(Gary KE4ZV's favorite)? Let's really make it a good one: each license
applicant must successfully lobby the FCC to turn one of our UHF+
allocations into "amateur exclusive".

As for the lack of good operators, there has also been a lack of good
elmering, especially by the W#xxx and K#xxx calls from days of old who look
down their noses at the new licensees. Some attitude adjustment is called
for all around.

>the "meaning" being, "Can you confirm IN WRITING that I made this
>contact with you via radio"

QSL has two official usages. "QSL?" means "Do you acknowledge receipt
of my traffic?" "QSL" means "I acknowledge receipt of your traffic."
They are procedural signals intended to be used for *over the air*
message handling, nothing about postal cards or snail mail is implied.

Subject: Using DSP to emulate a TNC

Hey guys/gals/other:

I am trying to use digital signal processing to emulate a TNC for packet
communication. Right now, I'm at the very start of my research, so I'm
looking for resource information.

1) What are the best WWW locations for DSP information?
(My crawler shows quite a few, but I don't know which ones are useful)

2) Where can I find documentation detailing how a TNC operates?
I know vaguely what is in there, but I really need the details.

Feel free to respond via this thread or by direct email.
Thanks,
Vince

Subject: What does CQ mean?

I had always thought that CQ was "come quick" but it could be an "old wyfe's tail."

The distress prosign was CQD (the D stood for "danger"?)

When the Titanic went down they transmitted CQD, then tried the (then) recently adopted distress signal SOS - proported to be the
first use of SOS.

No, I don't have the references for the above. Just passing it along.

Six is becoming popular, but due to the current state of the sunspot cycle you won't find much beyond local activity except during the infrequent band openings. *Then* it can get real busy. But if you're going to restrict yourself to one VHF+ band, I'd think seriously about a 70cm or 2m SSB rig before I'd set up for 6m. That's because there are many more operators, and more enhanced propagation modes to explore, on those bands. Your "dx" won't be global in scope (unless you go for EME), but it will be more frequent and more hectic as you chase tropo, aurora, and satellites.

However, if you're patient, a 3 element beam and a 100 watts on 6 meters can give you globe spanning results when the band does open. Meteor scatter also works better here than on 2 meters. In 4 or 5 years when the sunspot cycle comes around, 6 will be open to somewhere in the world almost daily.

Gary

>email - ee95ajm@brunel.ac.uk

Well 6m is good in the summer with sporadic 'e' but e's each day
become a bit boring especially after your log fills up with italians
and balkan area people. When the DX is around you might need a bit of
power to break the pile up.....and when there are no 'e's about it's
as dead as a dodo. Until conditions improve I'd leave it as your main
band.

For my money I'd go for 2m, much more activity especially in the
South, up here in the sticks it's quiet. But you could get a rig such
as an IC251e (around 300UKP) and add an amplifier to take it beyond
the 10 watts it normally gives out. For example, with 70 watts and a
9ele yagi I managed to work down to Reading from Edinburgh last night.
Ok it was a prearranged sked but that appears to be the only way to
get a long distance qso these days.......

Cheers,

Gavin,

From: (null)

A German group leaves home today for an operation from Christmas Island as VK9XY until Tuesday the 13th of February. They then go on to the Cocos-Keeling Islands as plan activity as VK9CR between the 14th and 23rd of February. They will operate CW and SSB on 160 to 6 metres, plus RTTY and satellites.

And from Barbados, VE4GV plans to be active as 8P9EN from Thursday the 8th until the 15th of February on all bands 80 to 10 metres, mostly CW.

Next the Rally News:

The Lancastrian Rally is taking place at the University of Lancaster today, the 4th of February. The doors open at 11.00, or 10.30am for disabled visitors.

Also today, the South Essex Amateur Radio Society Radio Rally is taking place at The Paddocks, Long Road, Canvey Island. The event includes RSGB Morse Tests on demand - candidates are reminded that they will need to take the test fee and two passport-size photographs along. Doors open at 10.30 am.

Next Sunday, the 11th of February, the Northern Cross Rally takes place at the Thornes Park Athletics Stadium on the A642 Horbury Road in Wakefield, which is a new venue for this rally. The event features the usual dealers, a bookstall and bring-and-buy stand, an RSGB Propagation Studies Committee stand and Morse Tests on demand. Please bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at the rally. Talk-in will be provided on 2 metres channel S22 and 70 centimetres channel SU22, and further details can be obtained from G0FLX on 0113 238 3622.

Also on Sunday the 11th, the Cambridge and District Amateur Radio Club Rally takes place at the Ambulance Station at Addenbrookes Hospital. The event features trade stands, a bring and buy stall and car boot sale. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For more details contact John, G0GKP, on 01954 200072.

And now a date for your diary:

The RSGB National VHF Convention takes place at the usual venue - Sandown Park in Surrey - two weeks from today, on Sunday the 18th of February. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show and special interest groups. Full

details are in the February edition of Radio Communication.

A new award in memory of Cyril James, G3VVB, and aimed at the home constructor of microwave equipment, will be presented for the first time at the RSGB VHF Convention. If you have an item of home-made microwave equipment and you are proud of the way you've constructed it, then why not bring it along to the Convention and enter it in the competition? The equipment can be constructed from any design, or from a kit - what the judges will be looking for particularly is quality of construction and finish. If you cannot attend the Convention in person, you may send detailed photographs and a written description to Steve Davies, G4KNZ, whose address is correct in the RSGB Call Book.

Now for the HF contest news:

The final session of the RSGB LF Cumulative is on 80 metres today, Sunday the 4th of February, between 16 and 1800 UTC. The rules were published in last September's RadCom, but please note that the dates were given incorrectly in September. The correct dates are shown in the February RadCom.

Next weekend, the RSGB 1.8MHz CW Contest takes place from 2100 UTC on Saturday the 10th until 0100 UTC on Sunday the 11th of February. The rules are in the September RadCom.

And the Dutch PACC Contest takes place on CW and SSB for 24 hours from 1200 UTC on Saturday the 10th. Brief rules are on page 22 of the February RadCom.

Next some VHF contest news:

The 432 MHz RSGB Affiliated Societies and Fixed Station Contest is taking place today, the 4th of February, between 09 and 1500 UTC.

And next Sunday, the 11th of February, the third session out of five in the RSGB 70 MHz Cumulative Contests will take place between 10 and 1200UTC. The rules for all these contests can be found in last September's RadCom.

And now the solar factual data:

The period from the 22nd to the 28th of January saw solar activity at very low levels and the geomagnetic field at quiet levels. Only one small sunspot group remained on the solar disc, and the mean was 7. Solar flux levels increased very slightly from 72 units on the 22nd to 74 units on the 25th. They remained at that level until the 28th and the average was 73 units. No solar flares were reported. Electron fluence declined slightly but remained at a moderate level. X-Ray flux remained at its minimum level of A1.0 every day. The 90-day solar flux average on the 28th was 74 units, the same as last week.

Geomagnetic activity was "quiet", with the levels down to only Ap 3 units on the 25th. The average was Ap 5 units. The aa indices, as supplied by the British Geological Survey for the period from the 16th

to the 22nd of January, increased from "unsettled" on the 16th with 15 nanoTeslas recorded, to "active" levels which lasted through to the 20th, when conditions returned to "unsettled". The most disturbed day was the 17th, with 26 nanoTeslas. The average for the period was 20 nanoTeslas, which is just K3.

I'll repeat the figures: spots - 7, flux - 73, Ap index - 5, X-Ray flux - A1.0.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 19th to the 25 of January, improved every day from 5.1MHz on the 19th, to 6.7MHz by the 25th. The average was 6.1MHz. The darkness hour lows decreased slightly from 2.2MHz on the 19th to 1.9MHz by the 23rd, but then increased to end the period at 2.5MHz. The average was 2.2MHz. The daytime highs took place between 0900 and 1400 hours. The darkness hour lows took place between 0400 and 0600 hours every day. Two short periods of sporadic E took place on the 22nd and the 24th.

I'll repeat the figures: highs - 6.1MHz, lows - 2.2MHz.

And lastly the solar forecast:

This week the quiet side of the sun is expected to rotate into view and later in the week the solar disc could become spotless. Solar flux levels are expected to decline to the high 60s. Geomagnetic activity is expected to be very quiet, but later in the week activity could increase to "active" conditions. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north, but levels could decline towards next weekend. The darkness hour lows are expected to be about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Victor and G7 Whisky Alfa series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Quebec series.

>is a few simple mods to do the job.
>

There is a varistor inside the standard network that is omitted in the
425J. It makes a dandy rectifier. Your phone will probably work OK
if you just bypass tip and ring to ground with 0.01 caps. Also put
a 0.01 across the varistor in the earpiece. If that isn't enough,
first cut the earpiece varistor (handset cord is acting as an antenna)
if that doesn't help, try one of the commercial inductive inline
RFI supressors (about $15). You can also make an inductive filter by
winding the wall cord around a ferrite rod or an old TV flyback transformer
core.

I think the difference is purely semantical. Perhaps I should have said
the tone of the CW antiCW argument. Where I live no one much cares what
class of license you have it is just one community. The net serves to

remind me just how luck we are to enjoy this harmony.

>Call Letters Now-a-Days.
>
>Just trying to get a handle on Call letters; I remember when it was only
>'W2" etc. As they ran out of single digits, there came "WA2, WB2" and WN2
>for novice grade etc. Now-a days, I don't know what is going on.
>
>Some questions:
>1) Are call letters still being issued by numerical region "2" being NY
>etc?

Yes, but you don't have to change your call sign when you move. So a
"2" could be living in Florida or Texas and still have a "2" call sign.

>2) Does the FCC fill in with old call letters (W2, WA2) as they expire?

No. The call sign system is *sequential*, there is no backtracking or
recovery of expired calls. Now when the *Vanity* call system becomes
operational, you can apply for an expired call sign to replace your
sequential call sign, for a fee, if you meet certain requirements,
but your initial call sign will be sequential.

>3) Can you tell the license grade by the letters?

No. All the call sign can tell you is the *initial* grade and call
district of a amateur. Any subsequent upgrade doesn't require a
call sign change. (You *can* request a new sequential call sign
when you upgrade, but many amateurs are attached to their old
calls and do not.)

For example, when I was first licensed as Novice, I was issued
WN4OAA. I expected to be issued WA4OAA when I upgraded to General
because that's the way it usually worked back then, but someone
had already gone straight to General in the meantime and had been
issued WA4OAA, so I got WA4VJZ. Now I could have kept that call sign
forever (through Extra if I liked), but I requested a new sequential
call sign when I upgraded to Advanced because the V and Z were easily
confused on phone. What I got was KE4ZV. The Zs and Vs seem to follow
me wherever I go. I could upgrade to Extra now and ask for a new
sequential call sign, but who's taking bets it wouldn't be Ax4ZV.
I'm used to my call sign now, so I guess I'll just keep it.

>4) What is the recent chronology of call signs since the WB2 issue?

Lists are published here and in QST showing the current call sign
groups being issued. The formats in use vary by district because
some districts have exhausted some series while others have not.

For example, the N4xxx series is exhausted in 4-land, so new Techs get a call sign from the Kx4xxx group (usually a Novice call sign) instead. And some will keep that call sign all the way through Extra, I know a few who already have.

Now when the Vanity call sign program starts, things will become even more confused since newly minted licensees will be able to get old W4xxx or K4xxx call signs for a fee. I've thought about getting W4ZV just to be contrary, but decided it wasn't worth it.

>into getting a HF amateur radio license. I call these people "Cry-Babys!"

By that standard, the FCC never should have approved TV broadcasting, since the only petitions they got were from broadcasters and equipment manufacturers who hoped to profit in the TV industry. Aren't you glad that the FCC usually considers the issues on *merit* and not on the benefit each petitioner would receive?

>Having morse code requirements helps establish a higher standard of
>amateur radio operators within the amateur radio community. If you
>"earn" your license, you will have more "respect" for it!

The same (very desirable) result could be obtained with better theory/practices testing, without the need to use one mode as a barrier to all other modes on HF.

1938. Re: Morse code Cry Babys!!!

Would you prefer a secret test, one that can't be studied *and commented upon*
as to its value?

In Kentucky, where a major education reform act was passed not long ago, the
public schools give standardized tests in certain grades that are used not only
to measure each student's progress but the success of each school and district.
There's been a great deal of controversy over whether these tests are measuring
the right things, but very little factual discussion of what's in the tests;
this is because, under the KERA law, parents can only see the test after signing
a non-disclosure agreement. This may prevent cheating, but it nicely
suppresses dissent.

Adding a tilde (~) before the "af9y", like this "~af9y", might be
necessary for some ftp or web browser programs.

> but call it whatever you want, for under the cover of the words
> ARRL Field Day "event", its a CONTEST!

The vast majority of stations that participate in Field Day do
so under less than ideal conditions. They erect stations in
under 24 hours that are not permanent stations, but using
available means to support, rotate, and power their radios.
As a result, few EME class stations are erected for Field Day.
Someone has probably done it and will prove the rule. ;-)

> So since AMSAT "supports" satellite contesting, why woun't AMSAT support
> other satellite contest?

The ARRL has long maintained that Field Day is not a contest.
You can choose to disagree with that view, but that hardly
makes AMSAT a supporter of satellite contests.

> Some say they don't want satellite contesting to ocure because they don't
> want all the "BIG GUNS" to hog all the satellite battery power. So what!
> AO-13 is going to crash anyways!!! Until then, the solar pannels will
> recharge the batteries. Lets get the most use out of the the bird before
> it burns up!

It has little to do with battery power and much more to do with
a fixed power budget. The transponder of *any* satellite whether it
is AO-13 or any other bird, has a fixed power limit. The transponders
are linear in operation. As a result, the strongest uplink
signals yield the strongest downlink signals. If the uplink signals
combined exceed a certain maximum, the AGC circuitry of the
satellite reduces *all* the signals. So whether the batteries are
in great or poor condition, the same result occurs, once the
AGC has been triggered, the loudest uplink dominates the downlink.

> I think its more of a "religious" and "political" issue. AMSAT needs to
> be in political alignment with ARRL, so they allow the ARRL Field Day
> contest to occure. However, those powers to be don't personally like
> contesting, so they don't support satellite contesting!

I don't know where you concocted this idea, but I doubt it has
little basis in reality. Read *any* text on amateur satellites
and they'll explain why traditional HF style contests are a
bad idea on the birds. Would you care to name names as to
who personally doesn't like satellite contesting? This is an
engineering issue not a personal preference issue.

> Kind of two faced double standard if you tell me!!!

Please explain. What double standard and in what way is
it two faced?

Back in the 70's, Hugh Cassidy WA6AUD, published a wonderful DX News Letter titled the West Coast DX Bulletin. In it he would conger up such characters as "Red=Eyed Louie", "the QRPer" and others.

Regarding propagation, Hugh recommended the proper incantations to the "Palos Verdes Sundancers" this was the only method known that might produce sunspots in the off years of the 11 year solar cycle. These incantations are a highly guarded secret amongst DXers but some information may be found in a book honoring Hugh:

DX IS !! THE BEST OF THE WEST COAST DX BULLETIN
BY CHARLES T. ALLEN W5DV AND JAMES A. ALLEN W6OGC

Late reports by the "predictors" say we have from 6 months to a year to reach the bottom of the 11 year cycle, then to the DXers delight (unlike other endeavors) its all up hill from there -- perhaps peaking around 2001 -- be there its a ball.

73 good DX (skip)

From: gkantor@intac.com (Gary Kantor)
Subject: Clegg FM-27B and Regency radios

Steve,

Funny you should mention the FM-27B and the HR-2 in the same sentence. The
running joke of that era was that if you had a Clegg FM-27B and a Regency HR-2
with a 146.940 receive crystal, you could indeed work all of 146 - 148 MHz
at the same time! The Clegg was capable of transmitting over that entire range
simultaneously and the Regency was so W-I-D-E that it could receive everything
within 1 MHz of the crystal (Center) frequency!

"The way Clegg talks and the way Regency hears, it's a perfect match!"
Yenta the Matchmaker....

Subject: Call Letters Now-a-Days.

Motu Iti asked:
>1) Are call letters still being issued by numerical
>region "2" being NY etc?
Answer: Yes.
>2) Does the FCC fill in with old call letters
>(W2, WA2) as they expire?
Answer: No
>3) Can you tell the license grade by the letters?
Answer: Not really. There is a scheme at the time of first
license,which (for the mainland) goes like this:
--Novice: 2x3 calls assigned, such as KB2XYZ
--Tech, Tech+, and General: 1x3 calls assigned, such
as N2XYZ
--Advanced: 2x2 calls (except none start with "A")
assigned, such as KB2XY.
--Extra: 1x2 or 2x1 calls assigned, such as N2XY or
NX2Y. Also 2x2 calls starting with "A" such as AB2XY.
This scheme gets diluted because you can keep your call
when you upgrade. Thus KB2XYZ who got that call as a Novice
can keep it all the way to Extra. Also, some blocks are "used
up" and calls from lower groups are being assigned. For
example in most areas the 1x3 calls are all gone so new
Techs, Tech+s, and Generals are being assigned 2x3 calls.

If the FCC would accept my old 2nd Class Scout certificate as a 5WPM CSCE... I guess it's more than a year old though, and I topped out at "STAR" and only Life and Eagle are for life, so I guess it doesn't count :-)

> since we've had a code free ticket since 1991, and there's about 150,000 folks
> in that group, you can't say for sure that all hams can copy.

And who knows how many of the old-time rag-chewers have copied anything since their last exam. Are more old keys becoming silent keys than Tech-'s upgrading? Don't know. Total number of hams _is_ climbing, but the pool of key-bangers (not counting people doing CW via MFJ/AEA multimode controllers!), what are known in some circles as "Real Hams", could be declining.

> you haven't been in
> touch with most boy scout groups if you assume that boy scouts can copy
> code..

According to a Ham I heard griping on 2m, the Boy Scouts no longer require morse or semaphore; you can pick ANY code you want. I guess I could pick ASCII. :-) (Or EBCDIC??? :-()

>copy his own dowlink signal

Friends,
Please correct me on any bad newsgroup etiquette, I am not sure
when its appropriate to express myself..

As to the alligators on the sats, I have only been working the birds
for a year and I must say overall most of the operators show a great
deal of class.. However one of the first things I discovered is the
great need to have the best recieve as you possibly can. I do the
best I can, but occasionally the station I am working will give me
a 5-7 or so signal report even the my downlink sounds like its in the
mud.. I learned to cut back at that point realizing that I have no
way of knowing how much metal is pointing at the sky on their end.
I agree about the beacon also on 13.. but judgement on 10 should be
used..

I enjoy fo-20 work as well, and that that is where your point really
is driven home.. I have heard cw operators just killing the downlink
to the point that you can hear the chop chop in the rest of the qso's
on the bird.. I experimented with a little cw on both fo-20 and ao-10
and was quite amazed at how little power produced a decent downlink..
5watts produced an echo on ao-10 when it was all I could do to hear
my downlink with 90watts ssb..

From: gars@afn.org (Gainesville Amateur Radio Society)
Subject: ANNOUNCE: ARRL Workshops and Forums in Florida

The following are four (4) announcements about various ARRL workshops
and forums in the next month in Florida

****

ARRL Technical Workshop
"Computer-Aided Antenna/System Design in HF/VHF Stations Including the
Effect of Local Terrain"

by Dean Straw, N6BV - ARRL HQ Sr Asst Technical Editor

Friday, February 2, 1996 - 12:00 noon to 5:00 pm
Miami Airport Marriott

Discover the "System Approach" to the design of antennas -- learn
about propagation, antenna selection, transmission line selection and
putting it all together.

This workshop will demonstrate computer modeling and analysis of HF
systems plus VHF Yagis and other gain antennas. You'll do hands-on
testing of antenna designs, including crude field-strength
measurements. You'll explore the effect of local terrain and
environment on the elevation pattern for antennas, and see the launch
angles required for efficient HF propagation to the world.

The charge for 5 hours of workshop, instruction and the accompanying
workbook is $15 for ARRL members and $20 for non-members. You may
also purchase the "ARRL Antenna Book" (the 736-page 17th edition
includes IBM-compatible software for Yagi analysis by 3 authors) for
$30 plus $5 shipping.

To take part, give your name, call sign, address and check or credit
card number to: Rosalie White, WA1STO, at (860) 594-0237 or send to:

ARRL CAD Workshop, 225 Main St., Newington, CT 06111.

Space is limited; respond by January 24. Those who attend for all 5 hours will earn .5 Continuing Education Units.

****

What: Youth Forum - for those who are 16 and under

Where: Miami Tropical Hamboree - Miami, FL
Dade County Youth Fair & Expo Center

When: Sunday, 4 February 1996 - 2:30 pm

Who: Youths (licensed and unlicensed) 18 and under get in free with a student pass from schools; age 10 and under get in free with an accompanying adult.

Why: You'll take part in hands-on demonstrations. You'll meet young people who will talk about their exciting on-the-air activities.

***

What: Educator's Forum - School teachers, volunteer instructors, recruiters

Where: Miami Tropical Hamboree - in the Tower Building at the Dade County Youth Fair and Expo Center.

When: Saturday, 3 February 1996 10:30 - 11:30 am

Why: Educators will talk about their successful teaching techniques. You 'll take home free materials.

See you there!
Sponsored by ARRL Educational Activities Dept.

****

What: Educators Forum

Where: Orlando Hamcation - Orlando, FL

When: Saturday, 17 February 1996 - see convention program for time

Why: Teachers will talk about what works in their classrooms. You'll take home free materials.

Spread the word!

Subject: No Theory...was Re: No Code = No Brain

In response to Bill Sohl, who writes:
>Well if that is the sum and substance of those pushing
>lower theory testing, then your assertions in this venue
>that put an implied equal weight on it are totally off the mark.

As stated to Bill DuBroff, that ISN'T the sum and substance
of those pushing for change. And whether we assign "equal weight" or
not has no bearing whatsoever on this issue. ORACLE, with
the sum total of only six people, was able to advance the
no-code HF proposal. I submit YOU have missed the mark, Bill.

>For the sake of this discussion, I think it is safe to
>say that NO ONE has suggested in this USENET
>arena that we should lower or eliminate theory testing.
>Additionally, even if you can point to one or two individuals
>that have, you know very well that it is an extreme minority
>viewpoint that isn't shared by the vast majority of
>hams on either side of the code/no code issue.

As for what is a minority or majority is up to conjecture. The
statements have been made, and that indicates possible trouble. As
for the sake of this discussion, your pointing to people
on Usenet skews the issue. My comments regarding easing theory
tests had to do with Fred Maia and others, not necessarily
specific participants to the Usenet. Again, as stated to DuBroff,
the be all and end all of discussion on this issue doesn't reside
solely with Usenet.

>Restoring what code exams? Are you now saying the
>no code tech license should be eliminated?

Not at all. Where do you reach that conclusion? This has to
do with HF code requirements, and one minute solid copy, versus
a multiple choice test, which can be passed by pure luck.

:Otherwise, one comes to the inescapable (and correct) conclusion
:that there's a movement to ease requirements into the Service,
:period. Note carefully also there are others who are questioning
:the value of exams in general, right on this discussion group, so
:again, one cannot declare "no one is pushing for easier theory
:requirements."

>Who and how often? I restate my comments above.

Many, and very often, as one can see by going through the
postings over the past month or two, just on Usenet alone. Have
you also monitored the HF/VHF bands lately? Where have you been?

:The problem with the eased requirement scenario is that it
:has yet to be shown that eased requirements would be
:beneficial to the Amateur Service.

>This is only an issue if there is any movement to ease
>requirements (other than the CW). Otherwise, this
>is just a diversion on your part from the basic question
>of code/slow code/no code debate.

Eased requirements have ALREADY taken place by means of
rote-memorized theory exams and multiple choice cw tests. The
key is to restore the condition where one must learn to
apply basic material, not simply memorize it.

:If Part 97.1 is to remain a viable component of the Amateur
:Service, easing of requirements does not fit in.

>Changing requirements does not need to simply translate
>into easing requirments.

Perhaps, but that's the way it's gone!

:If, on the other hand, ARRL and FCC wish to declare the new
:purpose and goals of the Amateur Service, it would be more
:professional of them to do it now, and get on with rebuilding a
:new Service.

>No one in this newsgroup seems to be suggesting this
>as a possibility other than yourself. The sky is not falling.

One wouldn't know if the sky is falling or not for the Amateur
Service, versus a personal radio service. The FCC is fairly
inactive these days, and no one seems to know what their
agenda is for the amateur service in the long run. It's time
we found out.

:In that way, at least, no one operates under false pretenses.
:The new challenge then becomes justifying one's frequency
:allocations under the new rules of the game.

>Or it isn't an issue if none of the above is true, which is
>exactly what I'll assert here.

You can assert what you wish, but now you'll have to SHOW it.
While you're figuring it out, there's no reason to become unglued
because there are those of us who simply want to mind the fort.

As I have stated before, I am completely in favor of a stronger theory
exam. Especially one which would include questions relevant to amateur
radio in the 90's...packet, digipeters, satellite communications, proper
repeater operation, etc. Wouldn't that make more sense than testing to
see how many electronic sound pulses per minute that one can copy?

Subject: New Web Site on Banned AIDS Book

FOR IMMEDIATE RELEASE

"Censorship Bypass" Web Site
Address: http://www.kaiwan.com/~bypass
Contact: AIDSCENTRL@aol.com

NEW WEB SITE ABOUT BANNED AIDS BOOK
Feel free to distribute this press release!

The United States government hopes you will never read the book "Why We Will Never Win the War on AIDS," by Bryan Ellison and Peter Duesberg. And, if the government has its way, you will never even know the book existed.

On December 29, 1995 - just two days before the new year - a New York Federal court issued an order that all copies of the book be destroyed. This latest order followed on the heels of an earlier order, by the same judge, banning the book from distribution anywhere in the United States or Canada - even for free.

Although he legally cannot distribute the book anymore (pending appeal of the decision), author Bryan Ellison is determined to alert the public to this blatant cover-up. "Until this lawsuit, most readers didn't know what to think about the startling AIDS controversy presented in the book," he said. "But now people are beginning to say, 'there must be something to this.'"

Nor is Ellison alone in his activism. Nationwide, hundreds of angry citizens are quickly banding together to form a grassroots movement to expose the war of censorship by the AIDS establishment. This growing voters' rebellion was sparked by the lawsuit to suppress the Ellison/Duesberg AIDS book, and is a reaction to the heavy-handed tactics used to silence dissent.

Already, this movement has spawned the "Save The AIDS Book" Legal Defense Fund, which is sponsoring a new home page on the Internet. Computer users can now access the "Fabricated Epidemic" page at the "Censorship Bypass" world-wide web site, where they are finding information on the AIDS cover-up, late-breaking news on the legal status of the book, and special previews of newly-released government documents and other eye-opening materials.

What makes the Ellison/Duesberg AIDS book so hotly controversial? Ellison and Duesberg belong to the ranks of hundreds of top scientists, including Nobel Prize winners and members of the National Academy of Sciences at major institutions worldwide, who now believe that the Federal government

has blamed the AIDS epidemic on the wrong cause. The HIV virus, blamed in 1984 as the official cause of AIDS, is actually a harmless germ against which the government has wasted over forty billion dollars in research and prevention, say these scientists. In their book, Ellison and Duesberg present evidence identifying the real cause of AIDS, and warn that the government is placing millions of Americans - including babies - in dire risk by refusing to warn the public about the truth. Worse yet, the book documents a systematic, nine-year campaign by the AIDS establishment to silence these prestigious dissenting scientists.

"If the public would find out about this disastrous mishandling of the War on AIDS, tens of thousands of government-funded scientists and gay rights organizations would lose their funding overnight," says Ellison. "That's why they have to stop our book, and that's why we can't let them silence us."

The "Censorship Bypass" web site has just come on line, and will soon feature internal government memos and other documents never before seen by the public. It will also provide important advice on the real prevention of AIDS - which is radically different from the government "party line."

Supporters and organizers of the "Save The AIDS Book" Legal Defense Fund expect this web site to help build public momentum for an official Congressional investigation of this AIDS scandal.

The "Censorship Bypass" web site address is:
http://www.kaiwan.com/~bypass.

Boy, oh boy. I thought I was the only one that felt like that.
I guess the trend will be to not only include an SASE and a $1, but we should also pay (in advance, I am sure) the cost of the electricity to operate the other ham's station. Then, our share of the depreciation on his station. Let's see.... $4800 (rig) + $1200 (antenna/tower), useful life 6 years, 5 contacts per month (can't over due it now). I guess we should send an SASE along with about $47 in cash (no check, of course).

What ever happened to friendship. Are some of us in this for the money???

Come on, lets enjoy this as a hobby.

:
: KE4IKT
:
:
In general there are enough listeners out there on any particular satellite pass that calling CQ will get you a contact. The birds are congested enough that finding a quiet spot on the more popular ones (e.g. RS-10/11) is hard to do. Adding extra traffic with a satellite-focused contest would overload them such that you'd probably have *less* chance of making a contact.

On top of all that, add in the temptation that contests bring to bump your power level and elbow your way onto the bird, and you'll end up with what I heard a few years ago during Field Day. Someone with a very strong signal kept calling CQ CQ CQ and his call sign 3-4 times, over and over, waiting a bare fraction of a second between each call. Since this was on AO-21, an FM bird (one QSO at a time), all he did was monopolize the entire pass with his calling. He never did make a contact, nor did anyone else.

A Satellite-focused contest would be an interesting experiment to see how our Amateur satellite fleet handles extreme overload, power management, battery failures, and other such things, but I'm not sure it'd be worth it.

If you want to have some long distance chats with a Tech license, satellite communication is the way to go, but you don't need or want a contest to "help".

I vote NO.

From: gerryc@airmail.net (Gerald Crenshaw)
Subject: DC connectors and wiring

ARRL Field Service, and Dallas RACES DC Connector Standards

The DC connector as recommended for Dallas RACES is the same as the one that ARRL Field Service recommends, the 2 pin Molex connector with .093" pins for DC.
The drawing for this connector configuration can be found in the ARRL hand book.
Having a standard connectors for DC and antennas and audio has proved it "worth" time after time during tornado and weather situations.
During the emergency communications efforts after the Lancaster tornado, lots of amateurs who were non RACES, volunteered there equipment to help. Because of the variety of connectors much of it could not be used during the first few hours of the effort. There simply was not time to modify the equipment during the initial effort.

Amperage Rating

Some people will argue that ARRL field service people "blew it" and this DC connector is not good for High Power (50 to 70 watts) 2 meter rigs as the connector is rated at 8 Amps. Please note that Radio Shack was very conservative with manufacturers ratings. This connector from Molex is actually rated at 12 amps.
The connector was tested by my Employers Quality lab at 13.8 V at 10 amps. After 50 connect/disconnect cycles the drop across the connector was 50mv at 10 amps, and after 200 connect/disconnect cycles the drop across the connector was 57mv at 10 amps. This connector will withstand a whole lot abuse and still work considering the "intermittent duty" nature of most mobile radios.

Parts and Part Numbers

This connector can be found by the Radio Shack part number 274-222.
This part number is a kit that contains 1 each male and female shell and 2 each male and female pins.
AMP and Molex make identical connectors that are directly interchangeable and in fact carry the same part, under identical part numbers. For those wishing to buy in bulk, the AMP/Molex part numbers are:

Male shell 03-09-2021
Female shell 03-09-1022
Male .093 Pin 02-09-2103
Female .093 Pin 02-09-1104

Each year after the National Weather Service "Skywarn" school we have a "connectorizing party" to introduce new RACES members to the connector standards and to help any who might be having trouble getting there radios standardized. This is done for the price of the connectors or they can provide there own.

Crimping or soldering

Our tests on this connector showed that most of the failures on this connector came not from the connector itself, but from improper field crimping. The failed connectors we tested failed because of crimps made with "any tool available" rather than the crimping tool recommended by AMP/Molex. The improper crimping caused arcing with the associated carbon contamination. Further tests showed that even improperly crimped connectors performed to spec. or better if soldered. For this reason in Mobile applications, CRIMP and SOLDER.
There is a NASA specification that calls for connectors to be "crimped when possible". It should be noted that this specification also covers the manufactures crimping recommendations and tooling.

Wire

Another failure mode that was noted was not from the connector but from the wire used with the connector. For Mobile applications 18 AWG (American Wire Gauge) is rated for 14 to 18 amps. Lamp or extension "zip" cord is rated in the 12 to 14 amp region.
18 AWG stranded wire is found in most any automotive parts store. Suppliers such as Radio Shack do not carry this size wire. Many of the failures came from people "one stop shopping" using smaller wire or solid wire that R'S. carried rather than purchase the larger "automotive" stranded wire.

Insulation and Strain Relief

After recommended crimping, you can add both extra insulation (to prevent fraying) and strain relieve at the same time with the addition of heat shrink tubing. Insulate both conductors with a 2 inch length of heat shrink per conductor. Make sure that the crimp part of the pin is covered with tubing. Shrink the tubing. After this is done, pass both insulated conductors through a slightly larger diameter of shrink tubing. A length of about 1.5 inches seems to work well, Place both of the conductors in the shell and seat the pins, slide the larger heat shrink down to connector shell, then shrink. Among other things this gives the connector a professional "finished" look.
The strain relief part from Molex works very well but is hard to come by in small quantity and is expensive. This compromise has worked well. Adding this insulation modification to an already assembled connector is possible with the "extraction" tool available from AMP, Molex and Radio

Shack.

Using the larger "Heavy Duty" 20 amp connector from Radio Shack

Again for those who argue that the 8 amp connector is to small, Radio Shack also carries a larger, heavy duty connector similar to a Molex. (Female connector and Pins 274-154, Male connector and Pins 274-151). Besides the larger pins and current capacity, this connector has a very nice "positive locking" latch molded in the nylon. These larger connectors seem to be in favor with the amateurs who like Mobile HF work. Additionally, these connectors can accommodate a much larger wire size. 10 to 14 AWG. Again Radio Shack was very conservative with their ratings on this connector.
For those amateurs who use these connectors as their "standard" in the Dallas area, they also carry an adapter to convert this connector to the ARRL/Dallas RACES standard.

Existing Original Equipment Manafactures (OEM) Connectors

Many amateurs do not like to modify there equipment from the manufactures connector. They prefer to leave there equipment "original" as this aids in resell value. Again all that is required for the standardization scheme, is to have an adapter available to convert to the standard.
The OEM connectors do not have to be replaced, simply adapted to the standard.

I work contests _only_ to bag new country/band/mode combinations,
and stick to the game plan during the contests (ie. no rag chewing).
I QSL virtually all the contacts I make during the contest. I think
it's fair to expect cards in return, as long as you include return
postage and SAE. This applies to _all_ QSL's. We're entitled to
the card, but not necessarily the postage or the addressing.

There are a few repeaters in southern California that use "odd" splits (each one has a different I/O spacing), but for the most part new systems stuff themselves onto existing 600 KHz spaced channels. Not many new systems considering how stuffed the band is here already, but use of CTCSS access (PL) helps a lot.

From: david_b3@sfov1.verifone.com
Subject: Advice Wanted on Buying 2-Meter Mobile Rig

I'm in the market for a 2-meter mobile rig, and want to know anybody's thoughts on the following scanarios:

1. Buy a new, basic Kenwood/Yaesu/Icom, which I can get for around $270-300. One year warranty. Reliable gear, but after the warranty runs out, potentially high repair bills (my 3-year-old Alinco DJ-580T HT has been in twice for repairs since the warranty ran out).

2. Buy a new Radio Shack HTX-212, which I can get for $299, with an optional
5-year warranty for like $40-50. Not as good as the Kenwood/Yaesu/Icom
rigs, but I won't have to shell out additional bucks over the next 5 years.

3. Buy a used K/Y/I rig, which would be cheaper, but if anything goes
wrong, potentially big repair bucks.

4. Buy a used RS HTX-212 rig, for which you can still get a 5-year
warranty, if it was purchased recently.

Money IS an issue, and I'd like to get the best rig I can for the least
investment over the next 5 years.

ANY and ALL advice is appreciated!

From: jamesm@sw2.canberra.edu.au (Jim Muller VK1FF/WB2FFY)
Subject: Alaskan Counties

I'm working on the USA County Award and need some help
with the Alaskan counties. The county hunters book I have lists
the counties as 1st District, 2nd District, 3rd District, and 4th
District. However, my Funk & Wagnalls Hammond World
Atlas lists the four areas as Northeastern, Central, South Central,
and Southeastern.

Out of all the KL7 QSLs I've received only one has the county
printed on it....so I'm pretty sure 3rd district = South Central.

Any help would be appreciated.

The answer is no farther than Part 97. You'll find the only amateur radio
gear requiring type acceptance are exernal power amplifiers for use below
144MHz (97.315, 97.317).

Maybe in the U.K. (I don't know), but the FCC rules only specify that
external power amplifiers for use *below* 144MHz require type acceptance.
Look at 97.315 and 97.317.

Subject: Clegg FM-27B and Regency radios

>I'd like to echo Gary's sentiments. I too had a FM-27B, and what he
>says is correct, though technically it didn't have a VFO, rather it
>had multiple VXOs. The only dirtier rig I've owned was the Regency HR-2.
>And at least it didn't drift, the Clegg did. It was certainly a novel
>radio for its time, but not something I'd want to put back on the air
>today.

Hi all!

I have also owned the Clegg FM-27B and reflect the same problems with
its spurious output. I also had severe intermod and overload promlems
on receive, as well. It was a novelty radio to own, though, in a day
when most radios were crystal controlled and had only 6 to 12 channels.
If I remember correctly, the Clegg also was one of the few that put
out a full 25 watts in a day when 10 watts was the norm for most rigs.

As far as the Regency, I have never owned an HR-2, but I still own an
HR-6, 6 meter rig. Those radios have the most un-stable transmitter I
have ever seen. You can keep the spurs down if you tune the transmitter
on the frequency you intend to use most, into the antenna you will be
using. Don't change frequencies, though, because you will throw spurs
all over the band!

I operate on 52.525 Mhz with this radio, and if my mobile antenna gets
wet, causing the SWR to rise, The transmitter goes nuts and I start to
bring up a repeater that has its input on 51.80, almost 2 miles away!
Now thats a sloppy transmitter!!!

I would like to see more stories relating to the classic radios going back
to the days when repeaters were just becoming popular----back in the
days when you were lucky to have 10 watts, a Ringo, and 6 channels.
It would be much better reading than all of the mud that is being slung
back and forth on this newsgroup!

Hmmm, well in rec.radio, maybe that works. But I'm not sure that'll make
a good battle-flag here in a.s.d! Besides, some of us have developed a
bizarre fondness for Burt. (Hey, I read Dilbert, too!) Years ago I used

to have a pet black rat snake I was sorta fond of, too. He smelled funny,
but he was great for getting rid of dead mice...

And aside from some of the personal attack flame-wars, *some* of Burt's
inanities stimulate thought and replies, which isn't always a terrible
thing.

For ROUTINE renewals, you don't use the 610 anymore, Robert. Yes - I know - it surprised me, too. Mine expires in March. FCC sent me a simple form many weeks back, which I signed to acknowledge that I wanted it renewed, and sent it back. They sent the form without being asked. Nice to have the feds doing something right!

If your address is still good in their files, you probably will get that form soon. If not you will then REALLY need a 610 to change the address!

From: Kevin Schmidt <kschmidt@ihnp4.ucsd.edu>
Subject: Requesting contest QSLs [was QSL etiquette]

I have read the "To QSL or not" topics. I personally reply to
all QSLs received. I also find it hard to believe that anyone, who has
time to get on the air, is too busy to write "confirmed by W1ABC", sign
the card they received, and stick it in the supplied SASE. But if
someone wants to toss away all the QSLs and SASEs he receives that's
his right. It is amusing to hear a contester suggest that he expects
operators to ask, during a contest contact, if he will reply to a QSL
request. I can see it now instead of something like this. (BTW, In my
imagination, this is in morse, and op1 is sending 35 words per minute
and op2 is sending 15 wpm.)

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY
op1: tu cq test de w1abc

I now realize that at least one contester wants:

op1: cq test de w1abc
op2: w2xyz
op1: w2xyz 599 ME
op2: tu 599 NY and by the way, I really need Maine to finish my WAS
if I send you a card with an sase would you be willing to send
me yours k
op1: r no k
op2: ok 73 w2xyz
op1: cq test de w1abc

This may reduce the qso rate somewhat for op1, but now that I know
what's expected...

From: wb6siv@cyberg8t.com (Raymond Sarrio)
Subject: <<FREE WWW Ham Radio Classified Page with Search Engine>>

The Raymond Sarrio Company9s Ham Radio WWW site is proud to announce a
FREE Ham Radio classified advertising page at
http://www.csz.com/sarrio.html. This new classified page will allow Hams
to find equipement with the help of a search engine--no need to scroll
through 1009s of listing before you find that special piece of gear. Plus,
when you find the gear you'er interested in, you are also provided with
easy point-and-click e-mail access, directly to the Ham that listed the
item.

For those Hams with gear to sell, take note! there is NO charge to list
your equipment within Ham Classifieds, and there will be no posting time
delays. Your posting(s) will go on-line in our classified search engine
in about 1 hour. All you need do is fill out a simple forms page, and upon its
(point-and-click) submission your 3For Sale2 classified is immediately
on-line.

I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.

Give it a try, and let me know how you like it (we are still beta testing)

Don't count on any sites carrying those alt groups. Here at UH we're
already max'd out at some 10,000 groups.

I guess throwing up a new repeater that duplicate coverage 10-fold isn't
enough to feed one's ego anymore - now one has to resort to creating
alt newsgroups... (Watch that blood pressure!)

From: David Hough <dave@llondel.demon.co.uk>
Subject: GB2RS News 4th February 1996

Good morning. It's Sunday the 4th of February and here is the GB2RS news
broadcast, prepared by the RSGB and intended for all radio amateurs and
short-wave listeners.

The RSGB responded quickly to reports on radio and TV, and in newspapers, about the Duke of Edinburgh's phone conversation being taped by "a radio amateur" or "radio ham". A press release was sent to all national newspapers and to radio and TV stations stating that "there is no evidence whatsoever" that the telephone conversation was intercepted and recorded by a licensed radio amateur. The individual named in the newspapers as taping the Duke of Edinburgh's phone conversation is not a member of the RSGB and it is firmly believed that he does not hold an amateur radio licence. The RSGB press release also pointed out that equipment capable of receiving analogue mobile phones is widely available and may be purchased quite legally by anyone.

The RSGB General Manager, Peter Kirby, G0TWW, was also interviewed by Independent Radio News, Associated Press, Sky TV News, and Channel 1 Cable TV on Tuesday and Wednesday over the matter.

A new 50MHz GB2RS news broadcast serving Central Scotland is starting today, the 4th of February, at 11.30 am. Initially, it will be for an experimental period of three months but will be continued if it proves to be a success. The transmission will be from the station of Tom Menzies, GM1GEQ, and will be on 51.530 MHz with vertical polarisation. Reports will be welcome, and should be sent to GM1GEQ via the RSGB QSL bureau.

The Barnsley and District Amateur Radio Club is co-ordinating a coach trip to Friedrichshafen in June on behalf of the RSGB. The Friedrichshafen 'Hamfest' is Europe's largest amateur radio exhibition. The coach will depart on Wednesday the 26th of June and return on Tuesday the 2nd of July and pick-ups can be arranged at pre-determined locations en route. Places are allocated on a first come, first served basis so contact the organiser, Ernie Bailey, G4LUE, without delay. He is available on 01226 716339, or 0836 748958, between 6.00 and 8.00pm.

There is a new QSL Bureau Sub-Manager for the GM0AAA to LZZ series of callsigns. He is Fred Roe, GM0ALS, and his address is 8 South Gyle Gardens, Edinburgh. The postcode is EH12 7RZ. The address may also be found in the RSGB Call Book under GM0ALS.

The Radio Amateur Invalid and Blind Club Northern Ireland Area is holding a flag day collection in the Ballymena town centre shopping complex on Friday the 9th of February between about 10.00 am and 9.00 pm. Anyone who can help for a few hours should contact David Caldwell, GI0HOW, on 01232 471370, or send a fax to him on 01232 471980, to arrange times and identification permits.

On Saturday the 10th of February, the Lincoln Short Wave Club is celebrating its 75th anniversary. The club was formed as the Lincoln Wireless and Scientific Society in 1921. There will be an exhibition and special event station at the Lawn Complex, Lincoln, from 12 noon until 5.00 pm, with a celebratory dinner in the evening. The day's events will be opened jointly by the Mayor of Lincoln, Councillor Geoff Ellis, and RSGB President Peter Sheppard, G4EJP. For further details of this, or the club's other activities, please contact John Middleton, G8VGF, on

01522 525760.

The annual Guides 'Thinking Day on the Air' takes place over the weekend of the 24th and 25th of February. A pack is available from RSGB HQ consisting of a list of participating special event stations and details of the countries which permit third party Greetings Messages during this event. Groups using a GX or similar prefix instead of a GB call are asked to contact Mrs Eva Telenius-Lowe at RSGB Headquarters by this Friday, the 9th of February, in order to be included on the list of participating stations. If you would like the pack, please send an A4-size self-addressed envelope, with 38p in stamps, to Eva at RSGB HQ.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

>as a replacement part. Being mechanical, it is the item
>that most often goes on a 720A. So when it goes, so does
>the radio . . .
> Jeff Shelton/KS4TL

Fact is the company who made the relay for ICOM in Japan went out of business several years ago. Before that happened ICOM tried to forcast the requirements for the relay for the next 5 years. Thye used them up in the 9 to 10 years that have passed since that time.

>it!

That's a rather incredible amount of lift for a weather balloon (which
of course *isn't* a hot air balloon anyway). I don't know where you're
getting your figures, but 350 pounds for 500 feet of #14 is absurd (it's
also 75% of the yield limit of the wire, so it wouldn't take much catenary
loading from the wind to exceed the limit). 500 feet of bare 14 gauge copper
wire only weighs about 6.25 pounds. That's too much load for a 10 foot Wx
balloon, of course, but you'd use something a bit thinner, say #22, which
would only weigh a pound for 500 feet. It'd break in a 24 MPH gust, though.

And I guarantee that if there is any wind at all, that balloon is going
to lay out along the ground instead of standing overhead. With a 10 foot
balloon, #22 wire, and a 15 MPH wind, that corresponds to a slant angle
of about 84 degrees off zenith. With very light breezes, the balloon may
stand as high as 45 degrees off zenith, but it would have to be dead calm
for it to approach zenith more closely than that. A lifting body, however,
like the advertising blimps, can be set to rise into the wind, and they can
approach zenith fairly closely, to better than 30 degrees off zenith. The
angle from zenith corresponds to the sum of the tangents of the vector
forces at work.

>For some reason everyone is thinking Wagner is stupid. We have talked in
>mail about this in the past. I think that he has a good idea, and with a
>lot of planing his club will do just fine.

I don't think he's stupid. I just think he doesn't have experience
with tethered balloons of this nature, and that he hasn't done the
math to see what angle the forces involved will yield. There are
three primary force vectors, lift, gravity, and wind loading. Those
are tied together by the catenary of the wire to yield the angle of
repose for the system. All the data you need is in the CRC Handbook.

If you've got a *lot* of excess lift, you can pull the wire more nearly
vertical for a given wind speed, but a lot of lift corresponds to a
large balloon, and that has a correspondingly large frontal area to
present to the wind, so the vectors still lead to a large angle off zenith.
The advantage of the lifting bodies is that they can supply lift *without*
a corresponding increase in frontal area, so they can reduce the angle
from zenith a lot more. Unfortunately, that puts more stress on the tether
too, so you have to go to a larger gauge, and that adds weight. It can be
a vicious circle.

If he lays out 2,000 to 10,000 feet of wire, he's creating an incredible
hazard if it gets away from him. The odds of it all coming down where

it'll miss a power line are pretty slim. Though for a Wx balloon to lift
that much he's going to have to use #30 or smaller, and it'll just vaporize
when it tangles with the power lines (automatic fuse). (And it'll break
under it's own weight and wind loading before it reaches full height anyway.)

Now there is another way. If he uses a large (manned) hot air balloon, he
can three point tether it with heavy steel cable and just hang the antenna
wire vertically below it. That may be what you're thinking of. He's not
going to reach 2,000 to 10,000 feet that way, however. Something on the
order of 300 feet might be possible before stresses on the central
tether connection to the balloon get out of hand during wind gusts.

(Of course he could use a *huge* tethered blimp, such as TV Marti uses,
and reach 10,000 feet, but I doubt he can afford that, Congress is
debating whether the US can afford that.)

Yes ... but not without problems.

I posted a WTB in alt.ham-radio.am last week, and it duly appeared.
Since then there've been no other postings in that ng.

I sent the WTB posting again last night and it got bounced back by
my ISP as 'No valid newsgroups specified'

Well goody for you.

Let me put it this way. Many people are never going to use CW. The work
required to learn CW is pointless. Do you enjoy pointless? I think you
should have to learn braille in order to get you license. It makes just
as much sense.

I don't know why I'm jumping in here, the old "I had to do it so you
should have to do it also" is a rather shortsighted attitude. It goes
to show that improvement of ham operators is the least of your worries,
you just worried someone might get the priviledges with less work. On
the other hand... I get the fealing that alot of CW proponents are afraid
that they wouldn't be able to deal with real competance tests. If CW went
away you might actually have to demonstrate theory competance with a
non-gimmee test.

So, is it better to keep numbers down via ancient skills that are unnecessary,
or is it better to force people to develop modern, relevant skills?

As for those that want the CW frequencies, that's fine, those people can
learn morse since it will be relevant to them. I would be all for
maintaining those as pure CW.

William,

The NIR-10 4.0 upgrade should allow you to duplicate ANY 3.0 setting,
since all the original code is still there - just with added features.
I made sure of that when I wrote the upgrade code. If you need a set
of the old v3.0 EPROMs to compare with, give me a call at JPS.

Why not have a techology filter? In fact, why have a filter at all? The
answer is alluded to by your next paragraph.

>>Face it, nobody really builds their own radios any more. Look in
>>the ham radio magazines and what do you see? Answer: mega-
>>dollar ham radios. This is the only difference between a ham radio
>>operator and a C.B. radio operator.

>to.

It is that *everybody* used to behave with more decorum, until decorum and
politeness gave way to PCism and everybody's right to say whatever they
want, whenver they want, dammit!

This is a general societal problem (and ham radio is more or less a
microcosm of society). The problem isn't solved by simply having a lid
filter. Besides -- no filter is perfect. Remember Murphy's Third Law:
Foolproof systems give rise to more clever fools.

>>If this attitude were pervasive, we would have penmanship tests to
>>use a state park, pie eating contests to drive on the public
>>highways and height requirements to run for elected office. The
>>code test is simply no longer relevant to operating a ham radio.
>your analogies are shaky at best.

Maybe, maybe not. It remains to be seen (just ask over in
rec.radio.amateur.policy someday) exactly what benefit, if any, continued
Morse training has for the Amateur Radio Service.

>The influx of poor operators since the advent of the no-code license is
>staggering. I have never heard so much foul language and obnoxious

>license classes. Anyone who truly wants a ham license will find that
>learning the code at the required snail's pace is no barrier at all...or
>am I overestimating people's abilities?

No, but if you're simply in a mood to create artificial barriers, make them
good ones. How about jumping out of an empty oil barrel? Or ditch-digging
(Gary KE4ZV's favorite)? Let's really make it a good one: each license
applicant must successfully lobby the FCC to turn one of our UHF+
allocations into "amateur exclusive".

As for the lack of good operators, there has also been a lack of good
elmering, especially by the W#xxx and K#xxx calls from days of old who look
down their noses at the new licensees. Some attitude adjustment is called
for all around.

QSL has two official usages. "QSL?" means "Do you acknowledge receipt
of my traffic?" "QSL" means "I acknowledge receipt of your traffic."
They are procedural signals intended to be used for *over the air*
message handling, nothing about postal cards or snail mail is implied.

Subject: Using DSP to emulate a TNC

Hey guys/gals/other:

I am trying to use digital signal processing to emulate a TNC for packet
communication. Right now, I'm at the very start of my research, so I'm
looking for resource information.

1) What are the best WWW locations for DSP information?
(My crawler shows quite a few, but I don't know which ones are useful)

2) Where can I find documentation detailing how a TNC operates?
I know vaguely what is in there, but I really need the details.

Feel free to respond via this thread or by direct email.
Thanks,
Vince

Subject: What does CQ mean?

I had always thought that CQ was "come quick" but it could be an "old wyfe's tail."

The distress prosign was CQD (the D stood for "danger"?)

When the Titanic went down they transmitted CQD, then tried the (then) recently adopted distress signal SOS - proported to be the
first use of SOS.

No, I don't have the references for the above. Just passing it along.

Six is becoming popular, but due to the current state of the sunspot cycle you won't find much beyond local activity except during the infrequent band openings. *Then* it can get real busy. But if you're going to restrict yourself to one VHF+ band, I'd think seriously about a 70cm or 2m SSB rig before I'd set up for 6m. That's because there are many more operators, and more enhanced propagation modes to explore, on those bands. Your "dx" won't be global in scope (unless you go for EME), but it will be more frequent and more hectic as you chase tropo, aurora, and satellites.

However, if you're patient, a 3 element beam and a 100 watts on 6 meters can give you globe spanning results when the band does open. Meteor scatter also works better here than on 2 meters. In 4 or 5 years when the sunspot cycle comes around, 6 will be open to somewhere in the world almost daily.

Gary

>email - ee95ajm@brunel.ac.uk

Well 6m is good in the summer with sporadic 'e' but e's each day
become a bit boring especially after your log fills up with italians
and balkan area people. When the DX is around you might need a bit of
power to break the pile up.....and when there are no 'e's about it's
as dead as a dodo. Until conditions improve I'd leave it as your main
band.

For my money I'd go for 2m, much more activity especially in the
South, up here in the sticks it's quiet. But you could get a rig such
as an IC251e (around 300UKP) and add an amplifier to take it beyond
the 10 watts it normally gives out. For example, with 70 watts and a
9ele yagi I managed to work down to Reading from Edinburgh last night.
Ok it was a prearranged sked but that appears to be the only way to
get a long distance qso these days.......

Cheers,

Gavin,

A German group leaves home today for an operation from Christmas Island as VK9XY until Tuesday the 13th of February. They then go on to the Cocos-Keeling Islands as plan activity as VK9CR between the 14th and 23rd of February. They will operate CW and SSB on 160 to 6 metres, plus RTTY and satellites.

And from Barbados, VE4GV plans to be active as 8P9EN from Thursday the 8th until the 15th of February on all bands 80 to 10 metres, mostly CW.

Next the Rally News:

The Lancastrian Rally is taking place at the University of Lancaster today, the 4th of February. The doors open at 11.00, or 10.30am for disabled visitors.

Also today, the South Essex Amateur Radio Society Radio Rally is taking place at The Paddocks, Long Road, Canvey Island. The event includes RSGB Morse Tests on demand - candidates are reminded that they will need to take the test fee and two passport-size photographs along. Doors open at 10.30 am.

Next Sunday, the 11th of February, the Northern Cross Rally takes place at the Thornes Park Athletics Stadium on the A642 Horbury Road in Wakefield, which is a new venue for this rally. The event features the usual dealers, a bookstall and bring-and-buy stand, an RSGB Propagation Studies Committee stand and Morse Tests on demand. Please bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at the rally. Talk-in will be provided on 2 metres channel S22 and 70 centimetres channel SU22, and further details can be obtained from G0FLX on 0113 238 3622.

Also on Sunday the 11th, the Cambridge and District Amateur Radio Club Rally takes place at the Ambulance Station at Addenbrookes Hospital. The event features trade stands, a bring and buy stall and car boot sale. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For more details contact John, G0GKP, on 01954 200072.

And now a date for your diary:

The RSGB National VHF Convention takes place at the usual venue - Sandown Park in Surrey - two weeks from today, on Sunday the 18th of February. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show and special interest groups. Full

details are in the February edition of Radio Communication.

A new award in memory of Cyril James, G3VVB, and aimed at the home constructor of microwave equipment, will be presented for the first time at the RSGB VHF Convention. If you have an item of home-made microwave equipment and you are proud of the way you've constructed it, then why not bring it along to the Convention and enter it in the competition? The equipment can be constructed from any design, or from a kit - what the judges will be looking for particularly is quality of construction and finish. If you cannot attend the Convention in person, you may send detailed photographs and a written description to Steve Davies, G4KNZ, whose address is correct in the RSGB Call Book.

Now for the HF contest news:

The final session of the RSGB LF Cumulative is on 80 metres today, Sunday the 4th of February, between 16 and 1800 UTC. The rules were published in last September's RadCom, but please note that the dates were given incorrectly in September. The correct dates are shown in the February RadCom.

Next weekend, the RSGB 1.8MHz CW Contest takes place from 2100 UTC on Saturday the 10th until 0100 UTC on Sunday the 11th of February. The rules are in the September RadCom.

And the Dutch PACC Contest takes place on CW and SSB for 24 hours from 1200 UTC on Saturday the 10th. Brief rules are on page 22 of the February RadCom.

Next some VHF contest news:

The 432 MHz RSGB Affiliated Societies and Fixed Station Contest is taking place today, the 4th of February, between 09 and 1500 UTC.

And next Sunday, the 11th of February, the third session out of five in the RSGB 70 MHz Cumulative Contests will take place between 10 and 1200UTC. The rules for all these contests can be found in last September's RadCom.

And now the solar factual data:

The period from the 22nd to the 28th of January saw solar activity at very low levels and the geomagnetic field at quiet levels. Only one small sunspot group remained on the solar disc, and the mean was 7. Solar flux levels increased very slightly from 72 units on the 22nd to 74 units on the 25th. They remained at that level until the 28th and the average was 73 units. No solar flares were reported. Electron fluence declined slightly but remained at a moderate level. X-Ray flux remained at its minimum level of A1.0 every day. The 90-day solar flux average on the 28th was 74 units, the same as last week.

Geomagnetic activity was "quiet", with the levels down to only Ap 3 units on the 25th. The average was Ap 5 units. The aa indices, as supplied by the British Geological Survey for the period from the 16th

to the 22nd of January, increased from "unsettled" on the 16th with 15 nanoTeslas recorded, to "active" levels which lasted through to the 20th, when conditions returned to "unsettled". The most disturbed day was the 17th, with 26 nanoTeslas. The average for the period was 20 nanoTeslas, which is just K3.

I'll repeat the figures: spots - 7, flux - 73, Ap index - 5, X-Ray flux - A1.0.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 19th to the 25 of January, improved every day from 5.1MHz on the 19th, to 6.7MHz by the 25th. The average was 6.1MHz. The darkness hour lows decreased slightly from 2.2MHz on the 19th to 1.9MHz by the 23rd, but then increased to end the period at 2.5MHz. The average was 2.2MHz. The daytime highs took place between 0900 and 1400 hours. The darkness hour lows took place between 0400 and 0600 hours every day. Two short periods of sporadic E took place on the 22nd and the 24th.

I'll repeat the figures: highs - 6.1MHz, lows - 2.2MHz.

And lastly the solar forecast:

This week the quiet side of the sun is expected to rotate into view and later in the week the solar disc could become spotless. Solar flux levels are expected to decline to the high 60s. Geomagnetic activity is expected to be very quiet, but later in the week activity could increase to "active" conditions. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north, but levels could decline towards next weekend. The darkness hour lows are expected to be about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Victor and G7 Whisky Alfa series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Quebec series.

>is a few simple mods to do the job.
>

There is a varistor inside the standard network that is omitted in the
425J. It makes a dandy rectifier. Your phone will probably work OK
if you just bypass tip and ring to ground with 0.01 caps. Also put
a 0.01 across the varistor in the earpiece. If that isn't enough,
first cut the earpiece varistor (handset cord is acting as an antenna)
if that doesn't help, try one of the commercial inductive inline
RFI supressors (about $15). You can also make an inductive filter by
winding the wall cord around a ferrite rod or an old TV flyback transformer
core.

I think the difference is purely semantical. Perhaps I should have said
the tone of the CW antiCW argument. Where I live no one much cares what
class of license you have it is just one community. The net serves to

remind me just how luck we are to enjoy this harmony.

1946. CT vs. NA Contest Software--Which is better?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-04 00:00:00 UTC
From: Jack Jeffery <jeffery@clark.net>
Message-ID: <31150223.170F@clark.net>
Source record: 231138

I'm planning on buying contest software soon, and have narrowed down my choices to two products--CT or NA. However, I'm really not sure which product has more to offer.

The ARRL Operating Manual does not shed much light on the differences, other than stating that NA covers several more events than does CT.

After having used NA in several contests at other stations, I really like it and would be satisfied with it. I have never used CT personally, so I really don't know much about it.

But, it seems that CT is much more popular than NA in the contest community. It seems that it has become the "standard" in contest software. I figure it must be for a reason.

Does CT have more features to offer than NA, or is it just more popular because it's been more heavily advertised?

Thanks a lot,

Jack Jeffery KB4CG

HI, Joe,
Watch on this forum for bulletins from ARRL. They will without doubt
put that info out whenit is known. Don't expect much info soon as
there were some requests to the FCC for review or modificataion and
that has to be cleared first.

My 733 was considerably worse in intermod rejection than my Icom 2410 was, back when I lived close to a cluster of 2-way system towers. A little farther out in the suburbs, though, and it's no problem. I agree with the suggestion of borrowing one and testing it at your location before committing the money.

1950. New repeater directory for S.W. US, Cal and Texas available

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-05 00:00:00 UTC
From: barry@indireect.com
Message-ID: <4f64dv$ph5@globe.indirect.com>
Source record: 230992

A new repeater directory has been printed by a ham in Texas. This directory is the most comprehensive directory on the market. It lists the repeaters by coverage area, frequency, call, etc. The Arizona Repeater Association is stocking the Southwestern edition which covers a 5 state area. The California and Texas editions are on order. Other states are also available but at this time, the ARA will probably not handle any others than the three listed above. I have posted a good description on the Arizona Repeater's Home Pagee. URL http://www.indirect.com/www/ara.

Need a Job? Be a Disk Jockey!

There is a nationwide Radio Disk Jockey SHORTAGE. There's never been a better time to break into the business. A new booklet written by a radio station manager will give you step-by-step instructions to becoming a Radio
Station Disk Jockey. Don't have a big, deep voice? Don't let that stop you!
Teach yourself to talk on the radio and write effective radio advertisements.
Working at a radio station is rewarding and FUN! If it's part time work you
need, radio is perfect because every radio station needs dependable part timers! The money is good, the hours are flexible and the work is so much fun it should be called "play!"

Your dream could come true! For information write to ARnd2it@aol.com

In article <184@ibbs.av.org>, js@ibbs.av.org says...

>
>
>So we get rid of CW. What is next? How much easier do people want it to be
>to get a license? Morse is required, so just do it. Oh I forgot that is a
>bit of work. We would not want to work for our reward.

There is a priciple of the work must be related to the reward. Most people
who want access to HF want it for purposes other than CW, such as SSTV,
Packet, etc. CW 9or more appropriately Morse Code) is just another data
encoding scheme, memorizing it for a test is silly. Memorizing it for a
givernment sponsored test for a hobby is worse, it's just another example of
big government...

Very nice indeed! But why arent all the title listings active?

(perhaps they are still under construction?)

WA8ULX (wa8ulx@aol.com) wrote:
> Roger Iam having a problem trying to find out why you want HF Privilages
> anyway. What do you expect to do on HF that you cant do on VHF?

Actually, for what I want to do it doesn't matter. I don't plan on every getting anything beyond codeless technician class anyway. It's just the silliness of trying to defend using an outdated communications technology as a license requirement kind of set off the BS filters and I couldn't resist. I was also rather annoyed at the current state of testing. For some reason it really annoys me to find that the written test is such a farce. I guess it fits right in with the educational expectations of most Americans, but it is a sad commentary on our society.

"Oh, actually learning something useful is too hard, they should just tell us the answers."

I've seen too many students in college trying to blame the professor or someone else because they don't learn the material. Here they are GIVEN the answers. It takes the feeling of accomplishment out of getting my license. The whole process went from challenge to annoyance. As for the code, why not provide real challenges that take useful knowledge as apposed to a contrived challenge?

Roger
Obnote: before looking at test answers I went and took the online tests. I failed miserably on the novice test because I didn't know the shorthand. I made 18 out of 25 on the tech test by falling back on my USN data systems technician electronics knowledge. What does this mean? I don't know.

Obnote2: I enjoy a good arguement.

1959. Guides on the Air - Skeds and Freqs?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-05 00:00:00 UTC
From: btaylor@mailserv.nbnet.nb.ca
Message-ID: <4f657e$c66@darwin.nbnet.nb.ca>

I have been approached by a group of guides in my area to help get
them on the air the weekend of February 17 and 18. Could anybody tell
me the suggested times and frequencies for these QSOs?

Thanks in advance...

AMATEUR RADIO: ELMERS LIST QUICK-SEARCH INDEX BY SUBJECT

(Note: This index is not necessarily all-inclusive and some Elmers are
listed more than once.)

AMATEUR RADIO EMERGENCY SERVICE (ARES)/RADIO AMATEUR CIVIL EMERGENCY SERVICE
(RACES)

* Chilton (EMA Radio Officer)
* Glago (Sonoma Valley, CA ARES and RACES Director)
* Humphries (ex-Asst. EC)
* Stader (EMAS SEC)

AMATEUR SATELLITE CORPORATION (AMSAT)

* Williamson, P (WWW Page, Anonymous FTP Archive, and Mailing Lists)
* Roth (Portland, OR Area Coordinator)

AMATEUR TELEPRINTER OVER RADIO (AMTOR)/PACKET TELEPRINTER OVER RADIO
(PACTOR)/RADIO TELETYPE (RTTY)

* Brothwell (BARTG Secretary, WWW Page, and Anonymous FTP Archive)
* Reynolds (FSK, PSK, MSK, Various Types of ARQ and FEC Systems)
* Sayer (also decoding CHU's ASCII time code)
* Sussman (Publisher of PACTOR News WWW Page, Speaker and Host of
PACTOR Forum at Dayton Hamvention)

AMERICA ON-LINE

* Ruh (ATV Quarterly Representative, Ham Radio Manufacturers and
Dealers Section)
* Stader (Host and Manager, Ham Radio Club Forum)

AMERICAN RADIO RELAY LEAGUE (ARRL)

* Bloom (QEX Editor, ARRL CNC Contact)
* Cebik (Educational Advisor)
* Cira (Los Angeles, CA ACC)
* Ehrlich (EMAS Internetworking ASM)

* Elmore (CO TC)
* Goldstein (Volunteer Counsel - Florida Only)
* Halle (Phoenix, AZ Area Official Observer Coordinator)
* Hare (Laboratory Manager)
* Hill (TN TS)
* Jahnke (VEC Manager)
* Lau (Technical Consultant)
* Newkirk (Webmaster, HQ WWW Page)
* Redding (Educational Advisor)
* Sefranek (EMAS TA)
* Stader (EMAS ASM and DEC)
* Tracy (InfoServer Sysop, TIS Coordinator)
* Turner (Volunteer Counsel)

ANTENNAS

* Brewer (wire HF)
* Brubaker (HF)
* Cebik
* Coyle (multi-band wire HF)
* DePolo (Design/Theory)
* Elmore
* Graham (wire HF for apartments)
* Halbert (simple designs)
* Hieber (wire)
* Hill (Mobile, including HF)
* Humphries (VHF and multi-band wire arrays)
* Mouw
* Myers (and transmission lines)
* Ornitz (including computer modelling)
* Reynolds (including HF)
* Rymell
* Salnick
* Salyzyn
* Sefranek (and Transmission Lines)
* Silva
* Standerfer
* Stine (wire HF)
* Stockton
* Taylor
* van de Kerk (HF Low-Profile)
* Zurn (wire HF)

ANTIQUE AND OLDER EQUIPMENT

* Bellville
* Brewer (40's-70's)
* Hill (Mailing List)
* Keys (including HF and CW)
* Paperman (Manuals, Service Information, and Literature)
* Standerfer

* Turner (including Kenwood and Ten-Tec)

APPLE MACINTOSH COMPUTER

* Bellville
* Ehrlich (including Amateur Radio Software FTP Archive)
* Seney (Macnet, including Anonymous FTP Archive and WWW Page)
* Stader (List of Amateur Radio Software)

BATTERIES

* Myers
* Hammill (Sealed Lead-Acid)
* Sefranek (including Solar Operation)

BRITISH AMATEUR RADIO TELEDATA GROUP (BARTG)

* Brothwell (Secretary, WWW Page, and Anonymous FTP Archive)

BULLETIN-BOARD SYSTEMS (BBS'S)

* Bertolino (Trance - Italy)
* Cira (HAM*INFO*LINK*SOURCE*BBS)
* Gathergood (CQ Centre - United Kingdom)
* Leadmon (WB3FFV)
* Meredith (F6FBB Packet BBS Support)
* Reeves
* Stillinger (IBBS)

CALLSIGN DATA/NATIONAL TECHNICAL INFORMATION SERVICE (NTIS)

* Carruth
* Lloyd (QRZ! Ham Radio CDROM and Callsign/E-mail Registry)

CIVIL AIR PATROL (CAP)

* Moore
* Standerfer

COLLEGE CLUBS

* DePolo (Technical Director, Univ. of Pennsylvania ARC)
* Edwards (Univ. of Maryland ARA)
* French, et al (Ham-Univ Mailing List)
* Hieber (IG-Funk, Univ. of Erlangen-Nuernberg, Germany)
* Killebrew (Trustee, University of Houston Amateur Radio Club)
* Madsen, et al (Iowa State Elmers)
* Schleck

COMMERCIAL EQUIPMENT

* Bellville
* DePolo
* Dodell (Mailing List)
* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)

* Wier (ICOM Mailing List)

CW (MORSE CODE)

* Bono (AutoCW)
* Elmore
* Hill (learning hints)
* Keys (including CWIST HF CW Net)
* Salyzyn
* Silva
* Stine
* Stockton
* van de Kerk
* Zurn (including European abbreviations)

DIGITAL SIGNAL PROCESSING (DSP)

* Bloom
* Bruhns
* Edwards
* Gilliver
* Hall (including WWW Page)
* van Vliet (Filters, including Integrated, Distributed, Lumped, and Active)

EQUIPMENT TESTING/TROUBLESHOOTING

* Brewer (Tube Gear)
* Bruhns (Low-Level/Low-Frequency Analog and Transmission Line Measurements)
* Coyle (Kenwood TS-830S and TS-940/AT Service)
* DePolo
* Elmore (Troubleshooting)
* Hare (ARRL Laboratory Manager)
* Lord (including Radio Doctor's WWW Page)
* Myers
* Ornitz (Instrumentation)
* Paperman (Manuals, Service Information, and Literature)
* Rymell (Electronics and Computer Service Work)
* Salnick
* Salyzyn
* Sefranek (including Power Supplies and Amplifiers)
* Seney (Digital Storage Scope FAQ)
* Standerfer (Test Equipment and Measurements)
* Stockton
* Taylor
* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)
* Witte (Instrumentation)

FREQUENTLY ASKED QUESTIONS (FAQ's)

* Adams (QRP Rig Standardized Info Sheets)
* Bowen (Supplemental FTP Archives, Internet Callbook Server)

* Cebik (QRP Periodicals, Electronics Books, and Antenna Books
Lists)
* Cheeseman (Australia)
* Dodell (rec.radio.info Newsgroup)
* Ehrlich (World-Wide Web)
* Goldstein (Packet Radio WWW Server, including Packet FAQ)
* Hieber (QRP Clubs and QRP-L Mailing List)
* Hill (Antennas)
* Jahnke (VE Exams Scheduled)
* Lloyd (QRZ! Callsign/E-mail Registry)
* Nobody (General)
* Ruh (Amateur Television)
* Seney (Digital Storage Scopes)
* Stader (Macintosh Amateur Radio Software)
* Turvey (United Kingdom)
* Williams (Amateur Radio WWW Server)
* Woods (Mail-Order Electronics)
* Yee (Online Repeater Directory)

GEORGIA RADIO AMATEUR PACKET ENTHUSIASTS SOCIETY (GRAPES)

* Coffman (E-mail Contact)
* Merritt (WWW Page)

HANDICAPPED OPERATING

* Gilliver (Blind Issues)
* Madsen, et al

HIGH FREQUENCY (HF)/CONTESTING/DX

* Bertolino (425 DX News and IOTA WWW Page)
* Brubaker
* Chilton
* Coyle (including Station Setup for New Hams)
* DePolo
* Elmore (DX'ing, Contesting, and Propagation)
* Gilbert
* Hill (Mobile)
* Kumagai (CQWW Committee Member, JIDX Committee Chairman, Japanese
DX Contest Mailserver and Mailing List)
* Madsen, et al
* Nerenberg (DX Mailing List)
* Salnick
* Silva
* Simpson (Best of 75 Net)
* Tidd (DXCC Databases)
* van de Kerk (CW, Low Profile)
* Veres
* Zurn

HOMEBREWING/DO-IT-YOURSELF

* Bruhns (including Low-Level/Low-Frequency Analog, DSP, Surface Mounting, and Transmission Lines)
* Carruth (Digital Design, Software)
* Chilton
* DePolo
* Edwards (including DSP)
* Elmore (Construction Practices)
* Gilliver (DSP, Blind Issues)
* Halbert (QRP)
* Hall (including DSP WWW Page)
* Hill ("Glowbugs" Tube Homebrewing Mailing List)
* Keys (Junk Box Projects, National Electrical Code for Hams)
* Kohnen (Tubes)
* Lau (Transverters, VHF/UHF, Filters, Repeatable Projects)
* Myers (Transmission Lines, Analog and Digital Design)
* Ornitz (Chemical and Toxic Material Use and Handling)
* Rymell (Electronics and Computers, Low-Cost Projects)
* Salyzyn
* Sayer (Class-C Bipolar Amplifiers and Phased-Lock-Loop Circuits)
* Sefranek (Amplifiers, Battery/Solar Operation, Power Supplies, and Repeaters)
* Silva (Analog, Digital, Tubes, Semiconductors, RF, Finding Parts)
* Stine (Tube Amplifiers, Receivers, and Exciters)
* Stockton (including QRP)
* Taylor (Tubes and Amplifiers)
* van Vliet (including Power Amplifiers, Low-Noise Amplifiers, and Mixers for Microwave)
* Woods (Mail-Order Electronics)

IBM PERSONAL COMPUTER (PC) AND CLONES

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

JOINT AMPR.ORG IP COORDINATOR FOR OHIO SUBNET (44.070.XXX.XXX)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

(see also Tony Schliesser)

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators

]

Chuck Adams K5FO

adams@sgi.com

MAINTAINER OF STANDARDIZED INFO SHEETS ON QRP RIGS

They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

OWNER OF QRP-L MAILING LIST

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

EXECUTIVE DIRECTOR, NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS

After a large disaster strikes your community and your family, I am sure you will agree that its a little late to start building a massive rapid response, emergency communications system supported by thousands of people within companies, organizations and serving as volunteers to provide essential support services.

We are the North American Center For Emergency Communications Inc. (NACEC), a federally-registered non-profit organization serving North America since 1992. We have been developing a system that merges many different technologies to create a unique, high-capacity, rapidly-deployable solution to the problem of communications outages and shortages that occur following a large disaster. Our volunteer network in using the Internet as its communications backbone, is itself using one of the many technologies employed in NACEC's overall solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a

success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.nacec.org/

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

AUTHOR OF THE FOLLOWING MS-DOS HAM PROGRAMS:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely
(AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online
callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE
compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5"
or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

MAINTAINER OF THE REC.RADIO.AMATEUR.* SUPPLEMENTAL ARCHIVES AVAILABLE FROM:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

MAINTAINER OF THE INTERNET HAM RADIO CALLBOOK SERVER AT:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights
into DSP applications that can do better in what used to be the analog
dominions. I can be of the most help with low-frequency analog stuff,
particularly measurements and low-level/low-noise/low-distortion
applications. I breadboard with IC's, discretes, and surface mounts
(which I prefer to use now, as surface mounting requires less drilling
of PCB boards once they are etched). My electrical engineering
education (Ph.D.) emphasized control systems. I also have a clear
understanding of transmission line measurements and behavior (a
personal research interest for the last 25 years or so).

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest
Group (BBSSIG) is sponsoring a working group to generate and
distribute a series of information bulletins which will serve to
instruct packet radio users in a variety of areas. These bulletins

will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

MAINTAINER OF LIST OF PERIODICALS OF INTEREST TO QRP ENTHUSIASTS, ELECTRONICS BOOKS OF INTEREST TO QRP ENTHUSIASTS, AND ANTENNA BOOKS OF INTEREST TO QRP ENTHUSIASTS

Available from the QRP-L WWW Page at:

http://ncc1701-d.cc.nd.edu/qrp-l/index.html

Since QRP-L has moved to lehigh.edu, the articles will also appear at this address on or about June 1, 1995:

http://www.lehigh.edu/lists/Archives/qrp-l/

(Note: the "A" in Archives is capitalized.)

Please direct all submissions, feedback, and administrivia for these articles to my E-mail address above.

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of the 1995 ARRL Handbook, and something of antennas, with a series appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

Arthur Chandler KO6OA

arthurc@crl.com

BayMOO, an all-text virtual-reality on the Internet (a form of Multiple-User Dungeon, or "MUD") has just completed an amateur packet radio simulation "room." This room can serve to help orient non-hams, or non-packet-operating hams, to some of the operating conventions and experiences of amateur packet radio networks.

BayMOO may be accessed from:

telnet://baymoo.sfsu.edu:8888/

When you log into BayMOO, just follow the instructions ("HELP," "MOVEMENT," and "HELP COMMUNICATION" will give you most of the basics.) To go to the packet radio simulation room, type:

@go Virtual Ham Central

You will need to contact "Akira" or "Dr.J" in the room to get transmission privileges.

You may use BayMOO with guest privileges by using your callsign as your guest login name (if you have one). If you want a permanent login, write to:

rk@world1.worldbit.com

giving your callsign as your username.

GRAPES 56 KBAUD PACKET RADIO MODEMS

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(see also Bob Merritt)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

RELAYER OF AMATEUR RADIO NEWSLINE BULLETINS

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Network. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in its entirety, not be subject to any further editing or commentary, and that full credit be given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in its entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in its full form over voice or digital forms of Amateur Radio, it is recommended that the closed circuit advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to

Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com

William (Bill) Coyle N3OGH

wcoyle@dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

mattd@branson.org -- send here first, please!
mdaless@ocf.berkeley.edu

I cannot claim to be an expert in any field, but I did participate in SAREX as the project coordinator for our school (The Branson School) in the STS-64 mission. I will be happy to help anybody else who is interested in any and all aspects of the SAREX project. I also know a little bit about UNIX administration, but I find myself asking questions more often than answering them.

I am a high school senior, so my real area of expertise is getting young people involved in ham radio. I was a speaker at the Dayton HamVention Youth Forum, and am active in recruiting in my local community.

Jeff DePolo WN3A

I am the US National Coordinator for RAIAR, Radio Amateurs International Awards Registry, we have over 78,000 registered members and just over 2,500 general members, plus lifers and charters also.

RAIAR only deals with the VHF/UHF spectrum for its awards, plus SWL on all bands.

I am ready to help any interested individual obtain his Novice or Tech ticket, as well as teach him the ins and outs of VHF Packet.

Our radio club holds classes for those inclined to advance to General and above.

Boston ARC ftp archives: ftp://ftp.barc.org/pub/hamradio/

I've played around with Mac and PC hardware, as well as dabbling a
little with DOS, UNIX, and MacOS.

I co-maintain the Boston Amateur Radio Club anonymous FTP file
archives with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

A VIRTUALLY COMPLETE ARCHIVE OF ALL ARRL BULLETINS SINCE 1992 IS AVAILABLE
AT:

ftp://ftp.barc.org/pub/hamradio/barc/w1aw-list/

A MIRROR OF ALL FILES AVAILABLE FROM THE ARRL INFO SERVER IS ALSO AVAILABLE:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserv/

THE ARRL INFOSERVER MIRROR HAS FCC PART 97 (U.S. AMATEUR RADIO SERVICE RULES AND REGULATIONS) AT:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserv/rib/part97.txt

PROGRAMS MENTIONED IN QST ARE IN:

ftp://ftp.barc.org/pub/hamradio/arrl/qst-binaries/

AMATEUR RADIO NEWSLINE IS NOW ALSO BEING ARCHIVED, TOO:

ftp://ftp.barc.org/pub/hamradio/docs/newsline/

MACINTOSH AMATEUR RADIO SOFTWARE ARCHIVE:

ftp://ftp.barc.org/pub/hamradio/mac/

HAM RADIO AND MORE, THE RADIO SHOW CARRIED LIVE EVERY SUNDAY (6PM - 7PM EST) ON THE TALK AMERICA RADIO NETWORK, NOW HAS A WORLD-WIDE WEB HOME PAGE:

http://www.barc.org/barc/ham-more/ham-more.html

THE BOSTON AMATEUR RADIO CLUB ALSO HAS A WORLD-WIDE WEB HOME PAGE:

http://www.barc.org/barc.html

DUE TO THE POPULARITY OF THE KY1N VE LISTING AND W1GSL'S HAMFEST LIST, I HAVE INCORPORATED BOTH OF THESE LISTINGS INTO THE BOSTON AMATEUR RADIO CLUB'S WEB PAGE:

http://www.barc.org/barc/ne-happenings.html

The Boston Amateur Radio Club World-Wide Web Home Page is now maintained by Mike Ardai. See his entry for more information.

The American Radio Relay League (ARRL) World-Wide Web Home Page has now moved to ARRL HQ. See David Newkirk's entry for more information.

You will need Lynx, WWW, or Mosaic to view them (or you may obtain a copy of the page via E-mail; send a message to listserv@info.cern.ch with the word

help

in the body for more information). Ask me for more details about this.

AMERICAN RADIO RELAY LEAGUE (ARRL) WEBMASTER

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

TUSCON AMATEUR PACKET RADIO (TAPR)

I am no longer a TAPR officer, but try to help out with the TAPR file server and am the "official" contact person on the Internet and CompuServe (71540,2364).

To access the TAPR file server, send E-mail to:

file-request@tapr.org

To get the help file and a list of available files, send the following commands in the body of the message:

help
dir
quit

All mail sent to that address is not read by a human. Conversely, mail sent to tapr@tapr.org is read by a human who will be glad to take your orders or process membership applications, but cannot send you file server files.

Joe Nobody N0CALL

nobody@nowhere.nodomain

REC.RADIO.AMATEUR.MISC FREQUENTLY ASKED QUESTIONS (FAQ)

Available from:

* http://www.smartpages.com/faqs/radio/ham-radio/faq/top.html
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

Currently the posting of these articles have been suspended indefinitely (and will probably be removed from the above sites shortly). New editors are being actively sought to take over maintenance of the above resources and keep them from disappearing from the net permanently. As with any volunteer effort, new volunteers are often needed. We need new editors to post the above FAQ's. Preferably this should be someone who has enthusiasm for hobbyist radio, experience with Usenet, and the ability to work with the other editors. No single person can know all the various aspects of these diverse hobbies so the editorial review groups are intended to make a greater combination of experience. A new maintainer is desired at this time to provide a fresh outlook as well as the opportunity to train new volunteers and avoid overreliance on a small group of people.

The FAQ's were posted with the auto-faq software, which is written in Perl (see Paul Schleck's entry). So it would be a plus for volunteers to post the FAQ to have Perl installed on their system and be able to use "cron" or "at" so that postings can go unattended.

With widespread net acceptance and use of the World-Wide Web, it might be desirable to rewrite the FAQ as a minimal "pointer" article with URL links. Such a minimal FAQ would reduce maintenance burdens, ward off criticism of the document for being "too big," and could be maintained as Hypertext Markup Language (HTML) at a WWW site, then "dumped" to an ASCII file for posting to news (to cover users who don't use WWW, as well as to actually feed a couple of automated FTP, Gopher, and WWW sites. Such an approach is used for the Elmers list; see the companion posting to this file, "Amateur Radio: Elmers List Info and Administrivia" for more information).

Anyone who wants to make their contribution to the Net as a volunteer should contact the Elmers Directory maintainer at elmers-request@gonix.com.

P.O. Box 7039
Cut 'n Shoot, TX 77303-0039
(H) +1 713 592-8636 (6pm to 9:30pm Central Time)
(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00 US/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

Bruce Perens AB6YM

perens@hams.com

MAINTAINER OF LINUX FOR HAMS CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

FREE CDROM SUBSCRIPTION FOR VOLUNTEERS

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

PHD CANDIDATE IN ADULT AND HIGHER EDUCATION

EDUCATIONAL ADVISOR, AMERICAN RADIO RELAY LEAGUE

I am primarily an adult educator conducting research in self-directed learning. I have been involved in the following activities:

* Teach licensing classes, since 1974.
* Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy Club, Lawton Astronomy Club.
* Public speaking and publish on growth in volunteer organizations, marketing adult and higher education and teaching amateur radio courses.
* Research in adult learning theory, adult motivation and organizational theory.
* Conducted a SAREX activity that involve seven communities, 21 schools and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

Tony Reeves AB6GA

tony@toners.com

Prescott, AZ

* Novice training, local VE for Novice-Tech tests
* General questions

I also operate a 24-hour landline BBS for Ham and General Interest:

+1 520 445-8472

Peter Reynolds KE4ABD

Peter Reynolds (KE4BAD) E-mail: reynolds.stc.nato.int
Voice: +31 70-314-2410 FAX: +31 70-314-2111
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague,
The Netherlands CompuServe: 100276,1340

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques

only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

AMSAT-NA LIFE MEMBER #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

AMATEUR TELEVISION QUARTERLY (ATVQ) MAGAZINE

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

John Rymell N3PFF

ryme@husky.bloomu.edu
Bloomsburg University
Bloomsburg, PA

Over 25 years in electronic/computer service work. Enjoy designing, building and operating vacuum tube and solid state equipment. Experienced in wire antenna and tuners, SWL, and Amateur Radio. Have real enthusiasm for building just about anything from next to nothing (:^)! Glad to help those in need.

Bob Salnick WA9BVE

Bob Salnick, Spokane,WA | UUCP: oliveb!isc-br!tau-ceti!DejaVu!salnick
Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

Internet Services (Finding FAQ's, using Usenet, FTP, telnet, Archie, FTP mail-servers, mailing lists, etc., etc.)

Club Activities, Examinations, and other events in the Omaha/ Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone interested in customizing their presentation of the rec.radio.* newsgroups

I would be particularly interested in mentoring/training new FAQ/Info maintainers for the rec.radio.* newsgroups (see also Jack Hill and Joe Nobody for FAQ maintenance opportunities and the rec.radio.amateur.* Working Group mailing list). To paraphrase Zack Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.2pl2, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgement message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

ftp://ftp.ucsd.edu/hamradio/packet/arrlcnc/1990/

My areas of expertise are:

* vacuum tube amps, receivers, exciters
* CW operating tips
* wire antenna tips, hints & kinks

David Stockton GM4ZNX

dstock@hpsqf.sqf.hp.com

* SWL since 1960
* Licensed since 1984 (UK full class A)
* Degrees in electronics&comms and digital techniques etc.
* Currently senior design engineer doing RF design

* Fairly broad interest in amateur radio (but not contests!)

* Antennas, Transmission lines,filters from fundamental theory to
practice
* Receiver structures and circuits from simple to state of the art.
* Transmitters, ATUs
* Test equipment
* Wide experience of troubleshooting/repairing equipment.
* Professional experience of EMC/RFI
* QRP
* UK Operation and Licensing

* My morse is flaky, but I keep working on it
* No interest in contests
* No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995
ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked
summing loop circuit to replace the common mixer-filter LO frequency
adder. A technical article describing the project was recently
published in RADCOM.

ARRL TECHNICAL INFORMATION SERVICE COORDINATOR (TIS@ARRL.ORG)

ARRL E-MAIL INFORMATION SERVER SYSOP (INFO@ARRL.ORG)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

QUARTER CENTURY WIRELESS ASSOCIATION

(see also Jim Walsh)

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/amsat/AmsatHome.html

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT NEWS SERVICE

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your

local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT BULLETIN BOARD

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - KEPLERIAN ELEMENTS MAILING LIST

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA RELATED INFORMATION MAILING LIST

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - SHUTTLE AMATEUR RADIO EXPERIMENT MAILING LIST

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be

processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

MAINTAINER OF THE UNIVERSAL AND FREE LISTING OF REPEATERS FOR RADIO AMATEURS

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my intent is to make sure it stays that way. For this reason, I have applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

}>all the cool bells and whistles, but what ham can fix them?
}
}Any ham *can* fix them. He just needs to learn the proper skills.
}
}Gary
}
}--
I have to disagree with you Gary. With the wide spread use of custom IC's,
radios are extremely difficult to trouble shoot. Unless you know exactly
how that little "black box" is going to react under various conditions
you are in for a really rough time.

73,
Bruce

BID: $SPC0205

=========
SpaceNews
=========

MONDAY FEBRUARY 5, 1996

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* AMSAT-UK CALL FOR PAPERS *
============================
The 11th AMSAT-UK Colloquium will be held at Surrey University, Guildford,
Surrey, U.K., from Thursday 25th to Sunday 28th July 1996. Current intentions
are to devote the Thursday to international/IARU matters and to structure
other subjects across the following three days.

AMSAT-UK invite authors to submit papers, about amateur radio space and
associated activities, for this event; we normally prefer authors to present
the papers themselves rather than having someone else read them in the
authors' absence.

Abstracts of Papers for presentation should be submitted as soon as possible;
the date for full submissions will be announced in a future bulletin. It is
likely that the final date will be about one month prior to the event in order
that the "Proceedings" document be available to participants.

Submissions should be sent to: Chris Jackson, G7UPN via Internet at:
G7UPN@amsat.org or direct on UO-22.

AMSAT-UK also invite anyone with requests for Program Topics to submit them
as soon as possible to G7UPN as above or to G3RWL or G6ZRU (both available
@amsat.org and on digital satellites). Invitations for papers on specific
subjects will be included in the future bulletin (about end-February).

An address for postal mail, plus information about UoS Colloquium Web pages,
will also be included in the future bulletin.

NOTE: SEND ALL OTHER INQUIRIES ABOUT COLLOQUIUM '96 TO THE AMSAT-UK OFFICE:

AMSAT-UK
LONDON E12 5EQ

[Info via G3RWL]

* OSCAR STATUS REPORT *
======================
PACSAT AO-16: Normal BBS.

DOVE DO-17: In MBL mode on 2 meters. MBL frames being sent at random intervals.

WEBERSAT WO-18: Not monitored this week

LUSAT LO-19: Not monitored this week

ITAMSAT IO-26: Not monitored this week

WX Sats APT 137 MHz only:
NOAA 12, 14: ON
Meteor 2/21: ON
Meteor 3/5 : OFF

[Info via Graham, VK7ZO]

* OOPS! *
=========
In last week's issue of SpaceNews, U.S. Astronaut Shannon W. Lucid was mistakenly referred to as a male. Sorry for the error, and my apologies to Shannon.

* DOVE NEWS *
=============
DOVE is in MBL (Microsat Boot Loader) mode while controllers sort out what's wrong with the satellite. The packets being seen in the 145.825 MHz downlink are short telemetry frames sent from 'DOVE' to 'MBLCTL', which is MBL Control. They are sent at more or less random intervals from a few seconds to several minutes. The primary purpose of this mode is to allow software to be loaded. This telemetry is in a binary format that may have been published several years ago but is of little interest because testing has shown it's not especially accurate and the Microsats are seldom in this mode for very long. As controllers continue the process of troubleshooting the satellite, other "strange" downlink packets will continue.

[Info via Jim White, WD0E, of the DOVE Team]

* GOES-9 NEWS *
===============
GOES-9, one of a new generation of U.S. weather satellites, is now on the job over the Pacific Ocean. The satellite has been positioned in orbit 22,300 miles above the equator at 135 degrees west longitude, enabling its cameras to view the western United States, Hawaii, Alaska and much of the Pacific Ocean, according to the National Oceanic and Atmospheric

Administration.

GOES-9 was launched May 23 and was positioned over the Gulf of Mexico for testing. Starting in December, the satellite was slowly moved 3,130 miles westward to its present location. The new satellite teams with GOES-8 to give full weather-camera coverage of the United States and adjacent waters.

Louis Uccellini, director of the NOAA office of meteorology, said the advanced instruments on GOES-9 will provide digital imagery of clouds, temperatures and moisture, all of which will improve short-term weather forecasts. Both GOES-8 and GOES-9 also measure solar activity and the Earth's magnetic field. Additionally, the satellites can aid in rescue services by relaying distress signals from people, ships and airplanes.

GOES-8 was launched April 13, 1994, and is now positioned at 75 degrees west, overlooking the east coasts of North and South America and well into the Atlantic Ocean. GOES-7, which had been in service for eight years, is being replaced by GOES-9. The older satellite remains in orbit and will be maintained on a standby status.

[Info via the Associated Press]

* W6OLO SK *
============
Jim Woods, KC7FG reports of the passing of Nick Marshall, W6OLO. Nick died on 25-Jan-96 in his sleep at the age of 81. Nick had been an Amateur Radio operator since the 1930s, was one of the founders of Project OSCAR, and one of the principals behind the early OSCAR satellites. He was active with Lockheed Martin at their Palo Alto Research Laboratory as a staff scientist up until his death. He was a charter member of the LERA (Lockheed) Amateur Radio Club in 1957.

Nick always looked to the future and welcomed great challenges. He actively promoted a repeater on the moon and a mission to Mars. He will be truly missed.

[Info via Jim Woods, KC7FG]

1968. AM on UHF???

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-05 00:00:00 UTC
From: ag001@lafn.org
Message-ID: <1996Feb5.203840.10585@lafn.org>
Source record: 231010

Over the past several days, I've noticed that my Bearcat 700A
scanner is picking up a local AM station, KFI (640 KHz) at
450.7250 MHz. Given the wide spread between the frequencies,
I cannot understand what's causing this. It was not a one-time
"fluke" either - it seems to occur on a regular basis. Moreover,
the signal on 450.7250 MHz seems to air some 10-20 seconds
AHEAD of the one at 640 KHz. Any ideas?
Thanks,
Abe, KE6OCM

LA TELEGRAPHIE

Invent&#65533;e par CHAPPE pendant la r&#65533;volution, puis &#65533;lectrifi&#65533;e par
MORSE,
ce fut le premier mode de trafic utilis&#65533; par les radio-amateurs au d&#65533;but
des
ann&#65533;es 20. Malgr&#65533; les progr&#65533;s de la technique c'est encore le moyen le
plus
rustique, le plus efficace, le plus &#65533;conomique de trafiquer. Seule ombre
au
tableau: l'apprentissage de la "lecture au son". Mais vous disposez
maintenant
d'une lumi&#65533;re pour vous aider &#65533; en venir &#65533; bout: UFT!

SAMUEL MORSE

MORSE (Samuel, Finlay) peintre am&#65533;ricain, inventeur du
t&#65533;l&#65533;graphe
&#65533;lectrique et d'un CODE. N&#65533; &#65533; Charleston (Massachussetts) en 1791,
mort en
1872. Il accompagne son ma&#65533;tre W. ALLSTON en Angleterre et obtient en
1813 la
m&#65533;daille d'or des Arts. Il retourne &#65533; New-York en 1822 et organise en
1824 une
soci&#65533;t&#65533; des Beaux-Arts qui donna naissance &#65533; l'Acad&#65533;mie Nationale de
Dessin.
En 1829, il visita de nouveau l'Europe. C'est &#65533; son retour aux Etats-Unis
qu'il
con&#65533;ut son t&#65533;l&#65533;graphe &#65533;lectro-magn&#65533;tique (1832). En 1837, MORSE, apr&#65533;s
avoir
modifi&#65533; son appareil, en fit la d&#65533;monstration devant les membres de
l'Universit&#65533;
de New-York.

De nouvelles exp&#65533;riences eurent lieu en 1837 &#65533; l'invitation du Congr&#65533;s
des Etats-Unis et en pr&#65533;sence d'une commission de l'Institut de Philadelphie.
En 1843, le Congr&#65533;s et le S&#65533;nat des Etats-Unis lui accord&#65533;rent une somme
de 30 000 $ pour se livrer &#65533; d'autres exp&#65533;riences et son t&#65533;l&#65533;graphe fut mis
en oeuvre en 1844 par l'&#65533;tablissement de la ligne t&#65533;l&#65533;graphique de Washington
&#65533; Baltimore.
Mais pendant ces 12 ann&#65533;es de d&#65533;marches, la m&#65533;me id&#65533;e &#65533;tait venue &#65533; d'autres physiciens qui se trouv&#65533;rent pr&#65533;ts en m&#65533;me temps que lui.
Le t&#65533;l&#65533;graphe de MORSE, d'abord adopt&#65533; en Autriche, en Prusse et en Suisse a
&#65533;t&#65533; adopt&#65533; en 1856 par l'Administration des T&#65533;l&#65533;graphes Fran&#65533;ais. Des essais
eurent lieu bien avant, ainsi la premi&#65533;re ligne t&#65533;l&#65533;graphique fut install&#65533;e en
1850 entre Paris et Rouen sur l'initiative d'Alphonse FOY et gr&#65533;ce au physicien ARAGO.
En 1851, on relie l'Angleterre &#65533; la France par conducteur sous-marin (Douvres-Calais).
En 1855 on compte 10 000 km de lignes et tous les chefs-lieux de d&#65533;partements sont reli&#65533;s &#65533; PARIS.

AMATEUR RADIO: ELMERS LIST INFO AND ADMINISTRIVIA

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII. The URL format is easily

mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and

years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@gonix.com, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource

Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

+ news:rec.radio.amateur.misc
+ news:rec.radio.info
+ news:rec.answers
+ news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+ ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:

+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be
available from the following WWW sites (In addition to enabling
the Elmers List to be viewed as hypertext, the site marked with an
asterisk also offers WAIS index searching by keyword):

+ http://www.gonix.com/pschleck/elmers/
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.mi
sc.html
+ http://www.cs.ruu.nl/cgi-bin/faqwais *

(Note: Because of maintenance problems - FAQ documents not being
promptly updated in particular - the sites at Ohio State and Smart
Pages are no longer recommended for accessing a current copy of
the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't
listed URL's for all of the newsgroups under this hierarchy as
there are now about a dozen of them (!!!).)

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

>etc?

being issued, yes. does a district number equal the station's location, no.
see signature file below...

>2) Does the FCC fill in with old call letters (W2, WA2) as they expire?

no. "vanity" call sign assignment will change that. but it's not in yet.
new guys will still be assigned from the rotation.

>3) Can you tell the license grade by the letters?

sort of. but you don't have to change your call when you upgrade.
see the FCC rules regarding the callsign groups.

>4) What is the recent chronology of call signs since the WB2 issue?

recent? geez when did they stop issuing WB2's? early to mid 1970's?

>knowledge, not memory.

got the test program. got the ability to generate custom tests (do so on occasion)
but those have to come from the pools...so if you think the pools are out of date
or wrong - what have you submitted to the revision committee for consideration
for the next pool revision? there's always at least 1 pool in revision every year.

the correct answer for the 80m novice band is 3675-3725 kHz for the US.
How is that not memorization?

Ryan-

Yes, the band is dead! It sometimes opens up, but not often. Sometimes, the band is actually open, but no one has found out about it. Listen for the CW beacons between 28.2 and 28.3 MHz. If/when you hear one, you can probably figure out what part of the world is coming through. (There may be a list of beacons posted in one of the FAQs.) If you can hear beacons, call CQ. There may be others listening that also think the band is dead.

As you probably know, 10 Meters is affected by the 11 year sunspot cycle. Fortunately, we've just passed the bottom, and are starting uphill again. Over the next several years, activity will be getting better and better.

You may have best results with a horizontal dipole, especially working DX. On the other hand, you may find that the R7 will work better locally, talking line-of-sight to stations with vertically polarized antennas.

VK2 elections

Divisional Elections

The Elections for the 1996-1997 Council of the Wireless Institute of Australia New South Wales Division will be held in association with the Annual General Meeting on the 20th April 1996.

Nominations for the council are now open and they will close at 12 noon on Saturday 9th March 1996. The Divisional Office will be open that day as well as its normal opening hours, which will be given elsewhere in the broadcast.

Candidate resumes will published and distributed with the ballot papers. Candidates are required to submit their resumes to the Divisional Office by the close of nominations, in both written form and as "UNFORMATTED ASCII on a 3.5 inch IBM disk". Resumes are to be a maximum of 200 words.

Nomination forms are NOW available from the Divisional Office.

The Office's telephone number is (02) 689-2417
The Office's fax number is (02) 633-1525
The Office's free call number is 1800 817-644

The Divisional Office's address is
109 Wigram Street Parramatta

VK2 WICEN news

WICEN News

Although the WICEN (NSW) Web page has been up some time, we regret that the interactive form feature is not working, due to what appears to be a local problem. For this and other reasons it is planned to move the page to a more suitable location, when one becomes available.

The Central Coast Amateur Radio Club Field Day, an event not to be missed for publicity purposes, is just three weeks away, on the 25th February, and since the Caravan is not available this year we would like to do something different. Your ideas are requested, so please let the publicity Officer, Dave VK2KFU, or the State Co-ordinator, John VK2AMH, know whether you can assist. We are particularly interested in photographs of WICEN in action (that's two words, not one), which can also be scanned for the Web page. Of interest to all listeners, not just WICEN members, is the fact that the NRMA has donated a "Green Slip" to be raffled off at the Field Day, so, if you are wondering how you are going to pay for your Green Slip this year, just drop in to the WICEN display and join the raffle -- all are invited.

The annual Bungonia Cave Rescue event is on the weekend of 16-17th March, and Mark VK2XGK would like to hear from those wishing to demonstrate their communications skills, under somewhat difficult circumstances; don't worry -- you will not be required to go underground. The potential for publicity here, before various emergency services and the public, should not be overlooked. On the same weekend, on 17th March, is the Red Cross Calling Doorknock Appeal, with David VK2UDT taking enquiries.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

WICEN (NSW) has an interactive Web page, and the Uniform Resource Locator is: "http://sydney.dialix.oz.au/~wiansw/wicen/".

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

NEWS BRIEFS

The Federal Government announced this week that it intends to force both Telstra and Optus Vision to lay their cables underground, where telephone cable ducting already exists. Local councils will also be given the power to insist on underground cabling in their areas. The new measures are in response to public comment about the laying of pay TV cables alongside existing above-ground telephone lines.

The new rules will apply only to cables that have not yet been laid; existing cables will not be affected. Optus Vision and Foxtel are reported to be concerned about the increased cost of laying their cables underground.

In the never ending quest for more sophisticated ways to kill and maim people, the US Air Force has published a 2000 page report revealing the kinds of weapons that could be introduced in the next 10 to 50 years. Some of the highlights include:

- pilot-less war planes, remotely controlled by brain waves, capable of speeds exceeding 11,000 km/h, armed with laser and microwave weapons;

- increased use of low earth-orbiting satellites to guide missiles to their targets accurately in all weather conditions;
so-called "information warfare" weapons designed to cripple enemy electronics, communication systems, and computers;

- Global positioning satellites capable of pinpointing objects on the ground accurate to one centimetre.

- Second generation stealth aircraft, with a completely smooth underbelly to reduce their radar profile. The landing gear would be mounted on top, so the pilots would have to land the aircraft upside-down.

(Who says war isn't fun anymore? :-)

Wyong Field Day

THE 1996 CENTRAL COAST FIELD DAY AT WYONG RACECOURSE
==========
Sunday 25th February, 1996

The CENTRAL COAST FIELD DAY is one of the longest running events in the Australian amateur radio calendar. The next Central Coast Field Day will be held on Sunday, 25th February, 1996 at Wyong Racecourse and this will be the 39th year of this popular and growing event.

As usual the large contingent of well-known suppliers of electronic equipment, components and books will be attending. These companies will have their latest products on display and many traders will have items on sale at very special Field Day prices. Last year the popular "Flea Market" attracted a large number of people who traded an enormous amount of surplus electronic equipment from trestles, their trailers or from the boot of their car. The organisers expect the flea market to boom with even more vendors than last year.

The organisers, the Central Coast Amateur Radio Club Inc. have kept the format for the Field Day in line with the changing face of amateur radio. In recent years seminars on a wide range of topical subjects ranging from packet radio to satellite communications have been a popular attraction. This year an even bigger program of interesting lectures and equipment displays has been arranged. Some attractions however have remained unchanged and ever popular, among these is the so called disposals sale of many thousands of new and used equipment ... many bargains going upfor grabs. Trading and all programmed activites will commence at 8.30 am.

ADMISSION ... Adults $10.00 ... Children under 12 Free ... Seniors card $5.00 ... Pensioner $5.00. A special group concession will also be available on application.

FIELD DAY ATTRACTIONS INCLUDE ...
* ALARA stand * Flea Market
* Disposals * Various Amateur Television Groups
* WIA Historian Stand * Packet Radio displays
* QSL Bureau * Fox hunts
* Seminars, techical lectures * Complimentary Bus Tour Tickets and Workshops * Reptile Park Visit
* VK2 Education Stand * Satellite Television Receiving
* Trade Displays and Sales Demonstration
* WICEN Display * Operating HF station

SEMINARS AND WORKSHOPS ... Several sessions throughout the day on topical subjects. Included will be talks on specialised topics and presentations by equipment suppliers.
A FIELD DAY INFORMATION SERVICE will be provided on the Gosford 2 metre repeater (6726) on Saturday afternoon and Sunday morning using the callsign VK2AFV/P.
TRAINS ... Sydney and Newcastle trains operate frequent services to Wyong station.
WYONG RACECOURSE is a short 5 minute walk from Wyong Railway Station.
PARKING ... Plenty of off street parking is available within Wyong Racecourse grounds.
ACCOMMODATION ... Accommodation is scarce on the Central Coast at Field Day time, and early booking is advised.
CATERING ... Tea, coffee and biscuits will be available from 8.30

am to 3.00 pm at no charge in the Dining Room. Takeaway food can be also purchased with Wyong Racecourse.
CALLS PRESENT ... Bring your QSL cards for the "CALLS PRESENT" boards.
EXHIBITORS ... Companies, persons, groups or clubs wishing to set up a traders table or display at the Field Day should contact the Field Day Committee at PO Box 732, WYONG 2259 before 31st January, 1996.
DISPOSALS ... Disposals lots for the 1996 Field Day will be limited to a minimum lot value of $20. Vendors who wish to sell items od small value are encouraged to sell via the flea market. Forms for Disposals and lot numbers may be obtained in advance by sending a stamped self-addressed business size envelope to - The Field Day Committee, PO Box 732, Wyong, 2259. Items for disposals may be booked in on Sunday, 25th February between 8.30 am and 10.30 am. Please note that 10.30 am is the cut-off time for booking-in of disposals and late arrivals cannot be accepted. Improperly tagged or catalogued items WILL be refused.
FLEA MARKET ... For those who wish to bypass disposals and sell their own equipment, trestles will be available nd open boot or tailgate sales may be conducted in the Flea Market. Setting up will be available from 8.30 am. Charges are $15 to set up and an additional $15 per trestle if required.
INFORMATION ... On the Wyong Racecourse venue, group Concessions, Trade Displays, Flea Market, Disposals, Programs or any other Field Day information can be obtained by writing to ...
The Field Day Committee
PO Box 732
Wyong NSW 2259
Phone (043) 40 2500
Packet VK2AFY@VK2EHQ

More than two thousand people attended last year's Central Coast Field Day. The next on at Wyong Racecourse will be bigger than ever, so mark 25th February, 1996 down in your calendar to go to the Central Coast Fiel;d Day at Wyong Racecourse. Gates will open at 8.30 am in wet or fine weather and all displays are under cover.

Club news: Chifley

some buses go along Hyatts Road past the church hall.

From Riverstone station:
Catch the 760 bus to Plumpton and get off on the corner of Cannery
Road and Hyatts Road, then walk 200 metres north along Hyatts Road
to the church hall. Check with the bus driver first as some buses
go along Hyatts Road past the church hall.

From Mount Druitt station:
Catch the 754 bus to Plumpton and get off on the corner of Jersey
Road and Hyatts Road, then walk 100 metres south along Hyatts Road
to the church hall. CHECK WITH THE BUS DRIVER FIRST.

From Blacktown station:
Catch the 754 bus to Plumpton and get off on the corner of Jersey

Road and Hyatts Road, then walk 100 metres south along Hyatts Road to the church hall. CHECK WITH THE BUS DRIVER FIRST.

For bus timetables rine BUSWAYS INFOLINE on 625 8900 and they will tell you what times the buses run. Tell the bus company that you want to go to the Good Shepherd Church, Hyatts Road Plumpton near Jersey Road.

I hope to see you soon.

Ray VK2KFO

Club news: Gladesville

A reminder from the Gladesville Amateur Radio Club Inc. that the first meeting for 1996 will be held on Monday week -- the 12th February at 7.30 pm.

Visitors are most welcome and the evening is scheduled to include discussion on the Club display at the forthcoming Central Coast field day at the end of the month. If time permits there is to be discussion on the future and advancement of Amateur television.

Fir furhter information please contact the Gladesville club on telephone (02) 427 0530.

Keith VK2ZZO - President GARC Inc.

Club news: Hunter Branch

VK2AWX broadcasts resume for 1996

Hunter Branch Radio Group advises that their Monday evening broadcasts from - VK2AWX - resume for 1996 tomorrow at 7.30 pm.

The - VK2AWX - broadcast can be found on 80 metres about 3593 kHz - also on 10 metres SSB, 2 metres from VK2RAN on 6900 and VK2RAG on 6725, VK2RAN on 70 centimetres on channel 8675 and simplex on 23 centimetres.

Besides their own local news they include highlights from - VK2WI - and a replay of the President's report.

The Hunter Branch Radio Group's monthly meetings resume this coming Friday the 9th --- 8 pm at the local TV studios. Lecture and location details on tomorrow night's VK2AWX session.

This advice from Rodney VK2CN - HBRG Secretary

Club news: AATC

The AATC will hold the next meeting of the A.A.T.C. Inc. as usual on the 2nd Sunday of the month at 109 Wigram St. Parramatta - 1.00 pm, and this will occur on February the 11th.

The technical demonstration will be about an AGC video signal processor to maintain 1v peak to peak from very low video signals ideal for camera, vcr to vcr and excellent receiver monitoring.

Also dicussed will be the Wyong Foeld Day latest info. Basically it is on and we will need equipment to show and chat about, volunteers please. If you built it, then let others know how.

Anyone interested in ATV is welcome to attend for general information and the general technical discussions relevant to A.T.V.

Also bring a 3.5" (1.4meg) floppy for updates to the club software.

For more information about ATV - contact Bob the Publicity Officer on (02) 587-3491 during normal civilised hours.

AATC Inc. Publicity Officer Bob Barnes

Club news: Tamworth

Tamworth Radio Club holds its meetings on the first Friday of each month commencing at seven thirty pm in the soccer rooms, Jewery Street, Tamworth. The next meeting is on Friday the first of March. Visitors are most welcome. Examinations are held at various times throughout the year (usually on request).

The New South Wakes WIA broadcast is relayed to listeners in the area of our repeater VK2RTM on 146.750 MHz thanks to Nev VK2FNP.

Tamworth Radio Club is pleased to be hosting the next NSW WIA Council meeting on February 10th at the West Tamworth Leagues Club and extends a welcome to visitors who will be attending.

Aynone wanting more information on the club or exams please contact David VK2ICY or Sharon VK2SHA on 067 622466 work or 067 691839 home.

S Margery VK2SHA
Publicity Officer

A.N.A.R.T.S. News Bulletin 894 4TH FEBRUARY 1996

FROM OHIO BULLETIN 240

DXCC NEWS. As reported in W1AW bulletins ARLD005 and ARLD006, the "ARRL Board of Directors" (BoD) at their meeting in Savannah, Georgia, approved a Membership Services Committee recommendation to add Scarborough Reef to the ARRL DXCC Countries List. The vote was 11-yes, 3-no and 1-abstention. Scarborough is added to the list based on DXCC Rules Section II, Point 2(a) (Separation by Water). The DXCC Desk announced that the start date for Scarborough Reef is January 1, 1995. Only QSOs made on or after that date will be eligible for DXCC credit. The first accredited operation took place in April of 1995. The 1994 DXpedition did not qualify as a land based operation. QSL cards will be received by the DXCC Desk starting April 1, 1996. Cards received before that date will be returned without action.

DIGITAL JOURNAL WW DIGITAL WPX CONTEST PART 3
10-11 FEBRUARY, 1996

EXCHANGE:

A RST REPORT PLUS A PROGRESSIVE THREE-DIGIT CONTACT NUMBER STARTING WITH 001 FOR THE FIRST CONTACT. (CONTINUE TO FOUR DIGITS IF PAST 1000.) MULTI-TRANSMITTER STATIONS MAY USE SEPARATE NUMBERS FOR EACH BAND.

POINTS:

CONTACTS BEWTWEEN STATIONS ON DIFFERENT CONTINENTS ARE WORTH THREE (3) POINTS ON 28, 21 AND 14 MHZ AND SIX POINTS ON 7 AND 3.5 MHZ.

CONTACTS BETWEEN STATIONS ON THE SAME CONTINENT BUT IN DIFFERENT COUNTRIES ARE WORTH TWO (2) POINTS ON 28, 21, AND 14 MHZ AND FOUR POINTS ON 7, AND 3.5 MHZ.

CONTACTS BETWEEN STATIONS IN THE SAME COUNTRY ARE WORTH ONE (1) POINT ON 28, 21, AND 14 MHZ AND TWO (2) POINTS ON 7 AND 3.5 MHZ.

E.G. 1-2-3, AND DOUBLE THE POINTS ON THE LOW BANDS.

MULTIPLIER

MULTIPLIER IS THE NUMBER OF DIFFERENT PREFIXES WORKED. A -PREFIX- IS COUNTED ONLY ONCE REGARDLESS OF THE NUMBER OF TIMES THE SAME PREFIX IS WORKED. NO BAND MULTIPLIERS

THE LETTER/NUMBER COMBINATION WHICH FORMS THE FIRST PART OF THE AMATEUR CALL WILL BE CONSIDERED THE PREFIX.

EXAMPLES: N8, W8, WD8, Y22, Y23, HG1, HG19, WB2, WD200, KC2, KC200, OE2, OE25, U3, GB75, ZS66, NG84.

ANY DIFFERENCE IN THE NUMBERING, LETTERING, OR ORDER OF SAME SHALL CONSTITUTE A DIFFERENT PREFIX. A STATION OPERATING FROM A DXCC COUNTRY DIFFERENT FROM THAT INDICATED BY ITS CALLSIGN IS REQUIRED TO SIGN PORTABLE, THE PORTABLE PREFIX MUST BE AN AUTHORISED PREFIX FOR THE COUNTRY OR CALL AREA OF OPERATION. IN CASE OF PORTABLE OPERATION, THE PORTABLE DESIGNATOR WOULD THEN BECOME THE PREFIX.

Notes of Interest:

WAKE ISLAND - This expedition has been delayed a week due
to transportation difficulties. The equipment has arrived
on the island but the group will not be QRV at KH9/AL7EL
until 1 February. They plan to be operational through 7
February on RTTY frequencies as follows: 28080, 21080,
18110, 14080, 7080, and 3580 khz.
Details oF the expedition, including a list of operating
frequencies on other modes, may be found on their Internet
Home Page at URL http://www.aurumtel.com/wake/
QSL route is to K4HQI, Lloyd Westbrook, Box 638, Commerce,
GA 30529.

KERMADEC IS, ZL8 - A DXpedition signing ZL8RI is planned
for May 1996. 'Permit to Land', and 'Operatimg License'
have been issued. 11 operators will be multimode and
multiband. Donations, which are desperately needed,
should be sent to: The Kermadec DX Association, c/o Mr. Ken
Holdom (ZL2HU), P.O. Box 56099, Tawa, Wellington, New Zealand.

THURSDAY 25
1818-14084 D68SE

NOTES OF INTEREST:

BS7H DXCC VOTE. The ARRL Board of Directors during meeting held on Savannah, Georgia approved reccomendation of a Membership Service Committee to add Scarborough Reef to the ARRL DXCC countries list based on DXCC rules section II, point 2(A) separation by water. Qsl cards will be accepted starting April 1st, 1996.

PACIFIC TOUR. Adriano, IK2GNW will be operating from February 18-22nd from KH8 American Samoa, February 23-25th from Western Samoa 5W1, February 25-29th from Tonga A35, March 1-3th from Hawaii KH6 He will look particulary for Europe on the low bands. Operation include also RTTY. Qsl via home call.

TONGA, A35. Paul, KK6H will be active from the Kingdom of Tonga between February 20th and March 20th. Modes of operation will be primarily CW and RTTY. During the operation he will sign A35RK and will be active from three different IOTA Islands. Tongatapu OC049, Ha'apai OC169, and Vava'u OC064. Qsl direct only to W7TSQ, Robert Preston, 809 Cary Road, Edmonds, WA 98020.

NORTH KOREA, P5. There are rumor for a possible operation on this one around mid to late February.

For IOTA hunters I remind you activity from Robben Island (AF-064) from 26 up to January 29th. Barry, ZS1FJ/G4MFW, will be on CW,SSB, and RTTY with activity on 80-10 meters. Callsign will be ZS64RI. QSLs via KA1JC.

The VK2SG RTTY DXNOTES are also available on Internet at reflectors dx@ve7tcp.ampr.org, an digital-dx@st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/~jukka/webcluster.html

For next week's bulletin send your bandpass to Bob, WB2CJL at @ W5KSI.#NOLA.LA.USA.NA.

Gl de (DX2) Luciano, I5FLN AT ZS5S.ZAF.AF

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 240 -- EXCERPTS

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, ARRL Bulletins, K3DI, K8PYD, NW8F, WB8LFO, 9A3GW, DF4RD, EI6FR, F5PYI, G3SXW, G4BUE & DX NEWS SHEET, JJ2QXI, ON6TT, OZ8RO and ZS6AOO the following DX information.

VK8, MELVILLE ISLAND (AUSTRALIA). This DXpedition will take place on IOTA OC-173 which is located in the Northern Territory (Arafura Sea Coast) West Group from March 8-11th. Two operators (VK8HZ and VK8NSB) and two different stations will be active at the same time on all bands from 6-80 meters. This rare IOTA is hard to get authorization to land because they need one from the Aborigen Council who owns the islands. QSL via VK4AAR direct only via 1995 or 1996 callbook address. ADDED NOTE: There was an indication

that dates and callsigns could be changed...

COMING EVENTS

FEBRUARY 10TH-11TH WW RTTY WPX CONTEST

17TH-18TH DARC HF RTTY PART 1

MARCH 16TH-17TH BARTG SPRING RTTY
CONTEST

APRIL 6TH-7TH EA WW RTTY CONTEST

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President(Col) VK2CTD at VK2DAA, or the Secretary (Pat) VK2JPA at VK2WI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2WI. Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au
or
patl(at)extro.ucc.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

Gary Coffman I must say thank you for your comments above because it is these comments that made me try to find and understand the distribution capabilities of 'Free Agent'. Because of other post related to the above I thought it might be appropriate to include the following from the help capabilities of 'Free Agent' (most likely the best news reader available today, my opinion you know). While this is extracted from 'Free Agent' it contains many points related to post of articles and e-mail applicable to other readers. One must open the 'All Fields>>' button in 'Free Agent' to find the additional fields such as distribution which are referred to in the above post.

Distribution (News only) This field is used to alter the distribution scope of the message. It is a comma separated list similar to the "Newsgroups" field. User subscriptions are still controlled by "Newsgroups", but the message is sent to all systems subscribing to the newsgroups on the "Distribution" line in addition to the "Newsgroups" field. For the message to be transmitted, the receiving site must normally receive one of the specified newsgroups AND must receive one of the specified distributions. Thus, a message concerning a car for sale in New Jersey might have headers including:

Newsgroups: rec.auto,misc.forsale
Distribution: nj,ny

so that it would only go to persons subscribing to rec.auto or misc. for sale within New Jersey or New York. The intent of this header is to restrict the distribution of a newsgroup further, not to increase it. A local newsgroup, such as nj.crazy-eddie, will probably not be propagated by hosts outside New Jersey that do not show such a newsgroup as valid. A follow-up message should default to the same "Distribution" line as the original message, but the user can change it to a more limited one, or escalate the distribution if it was originally restricted and a more widely distributed reply is appropriate.
Expires (News only) The date you want the article to expire.
Followup-To (News only) The newsgroups where you want follow-up articles posted.
Keywords Optional keywords to help categorize the article or email message.
Organization (News only) Your organization, company, school, etc.

Maybe the above will help others like myself in future postings.

On the other I did not know the term "excuse the bandwidth" constituted "begging forgiveness".

I think your intent was good but the way the post came across sure as hell riled a bunch of people according to the post on the subject.

I wouldn't worry too much about easy tests. Ham rosters are going to steadily drop for the xt few decades, now that that people can communicate through the Internet. The code req was eased to get people to stay on, or join up.

This is a fringe hobby...don't sweat the licenecse requirements. Not too many potential new hams are out there anymore...take what you can get.

>2700. Please reply via email. Thanks.
>
I have had no problems worth mentioning with intermod on the TM-733A.
Compared to my TH-78A hand-held radio, the 733A is great!
I have noticed that the RF environment is critical to which radios work
well and which ones don't. The 78A was nearly useless in parts of the
Rapid City, SD area last year. There are problem spots around the
Los Angeles area too. By comparison, my friend's Yaesu FT-530 had
intermod troubles too, but in different geographic environments.

In short: borrow a TM-733A and use it in the place you will need it,
before you commit the cash for a new one.

BTW: one of my old timer friends says the problem most people have is
cross-modulation, or mixing, and not intermod. Intermod is something
that happens in transmitters, not receivers. Eh?

Hope this is a help to you.

But more to the point, what condiment did he use to eat the dinner with. If it was with HP Sauce, and this was before Vatican II, this poor guy is probably doing time down below.... If it was with Tartar sauce, I am sure ther arguements would be endless and would be better debated in the list.bit-serve.catholic newsgroup(never heard the story, but the possiblities are endless I am sure!)

You'll still have to upgrade. Calls that are in a group designated only for a certain class of license or higher are not available under the vanity program to those not holding at least that grade. W4ZV would be available only to an extra class licensee.

On the other hand, some call sign sequences have never been issued to my knowledge -- what if I asked for something completely off the wall like WT1AA? Hmmm...

According to a flyer I have : INDIANA HAMFEST MARCH 10th. 1996
at the Indiana State Fairgrounds.

There is no time given for starting or stopping and no vendor list.
Having never attended this particular event -- I don't know about
computer vendors but in all the others around the area there has always
been quite a few computer booths. 73's ED AA9OE

Geez, I thought it was those soulless Republicans who were changing all the rules in Washington these days, throwing out all the useless bureaucratic regulations and red tape that are standing in the way of progress, giving away huge chunks of the radio spectrum to broadcasters without asking them to WORK for it (or to provide additional broadcasting jobs).

Oh, that only applies to CORPORATIONS. Sorry, never mind.

>I have done something wrong???? I also have a R7 I will be installing
>when the weather breaks.
>
Hi Ryan, yep the band is that dead. We are near the low of the 11 year sunspot cycle. Have a local amateur check your signal on 10M, then get on the DX Packet Cluster in your area -- if 10M opens and it does occaisionly with sporadic E layer propagation the DX boys will post an alert. In the past few weeks we have had KH6, LU, PY and some Central American stations reported on 10M here in Calif. You shud hear some Carribean stuff there in N.J.

If you can get the R7 up and running you should do quite well on 40M both during the day and eve. Propagation is very good on this band during the winter.

The R7 only needs to be 7 or 8 foot off the ground -- its a super low angle radiator and works quite well.

Good Luck
Rod

> I got another method: get a syrringe and inject salt water in the cable
> that will work wonders

I got an answer to that. My "coax" is a length of spare 75ohm TV coax, which goes from my window along the side of the house and up to the top of the pole. The real coax goes down through a hole in the floor, underground and up the centre of the pole. I'll probably add some sort of tamper-alarm to the "coax" one day too, or perhaps just put a few hundred volts on it. <grin>

There are a lot of dickhead CBers who think they can DF and go around cutting the first coax they see just 'cos they're getting an S9.

The next test session sponsored by The Mid-Atlantic DX & Repeater
Association
will be held on Saturday February 17 at St Paul's United Methodist Church
51 South Main Street, Smithsburg, MD. Test time is 10 AM. Applicants
should
arrive at 9:30 AM.

This is an ARRL VEC test session. Walk-ins are welcome but you can
preregister
and get directions to the site by calling the MADRA voice BBS at
301-416-8447
and select Box 110.

Test fees for 1996 for the ARRL VEC are $6.05

Be sure to bring your original and copies of all necessary licenses and
CSCE
to the site along with your ID and fee.

146.520 MHz is the ARRL established national calling frequency for 2m.
It does not work quite that well in metropolitan area because there are
way too many repeaters that few people listen to the calling frequency.
What's worse is some people will use the frequency for simplex.

The segments from 450.000 to 451.000 and 455.000 to 455.000 are primarily allocated to the media services. The bottom and top 100 kHz of each of those segments contain "group P" channels (pretty sure that's what they're called). Channels in the group P range are spaced at 10 kHz (e.g. 450.010, 450.020, 450.030, etc.). They are used for telemetry, typically from a broadcast transmitter site back to the studio. The remainder of the frequencies outside the group P blocks are spaced at 12.5 kHz and typically contain program audio, remote audio, ENG channels, etc. It's not uncommon to hear program material on those channels. I don't know if those channels are commonly allocated for STL use (studio-to-transmitter link), but I assume they could be. Most STL's, at least on FM, are in the 950 MHz range or are done by copper.

: hofgren@kuai.se

The two follows on this which first appeared here refer to the telegraphic system, rather than the Morse Code. From memory, my impression is that the Morse Code originates with S.F.B.Morse. It has a fair number of characters which differ from what we used now on radio, which is best described as International Code or International Morse Code. Its particular difference was that it included another kind of space, an intracharacter space, so that the letter C, for instance, was .. .
In most American lan-line telegraphy, right up to the 1920's, reception was on a sounder, which was essentially what we would now call a relay with a fairly heavy rod for an armature. This bar pulled down on the magnet when the key at the other end was depressed, and came up and hit a stop when the key was released. Thus the sound was more related to key clicks, or radio c-w with the bfo turned off, than to the radio code we use now. To cause the "make" sound to differ more from the "break" sound, things, sometimes like the shell of a bell, were often attached to the upper stop.
Again, from memory, in the 1880's an International Conference adopted the code we use now. Outside the U. S. more automated systems were more common, using for instance, pen recorders writing on paper tape. The British sounders were also vertical and more like a magnetic compass, with a different resonator at the two sides do the make and break would be distinctive.
Sorry, no references here.

Several channels are available in this range for remote broadcast. Such a setup would be a remote from a shopping mall, etc. Normally these are paired with another frequency that is +5 mHz higher. The UHF signal will be in real time, vs. the primary signal which is delayed several seconds to allow for bleeping of unwanted words.

>Felling 73 Bruce

Hey! The Morse test is just a memorization test too, and there are
only 26 "questions" (plus punctuation) in the pool to memorize, and
they're all published in advance. The only differences between this
and the other parts of the exam is that there's a time limit in which
to "answer" each question, and that you can't reason out the answer
from first principles, only memorization will work.

I'd suggest that you consider that the purpose of testing is not to
measure "effort". The purpose of testing is to see if the applicant
has the knowledge required by the government to satisfy their concerns
that he be able to operate safely and legally. That's all, nothing
more, nothing less. And I agree with you that the present tests don't
meet that criteria very well. But I don't agree that's because the
syllabus is published. I believe it is because the syllabus is too
limited.

We need to do two things to restore confidence in the amateur exam.
First we need to expand the scope of the syllabus beyond simple
Ohm's Law type problems, and start to include some real practical
radio electronics theory relevant to problems an amateur may face
that could cause illegal operation. And second, the question pool
needs to be *much* larger. Few people can memorize 3,000 questions,
though they might manage to memorize 300. (I contend that its still
easier to understand the principles rather than to memorize even 300
questions, but some people think that memorization of that number
is easier. Memorizing 3,000, however, is beyond most people other
than a few savant talents.)

We can do both of those things without rules changes. The VEC
question pool committee regularly solicits input on the content
of test questions from the amateur community, and the VEC question
pool committee is free to enlarge the size of the question pool

to any size that they like (the rules set a minimum pool size, not a maximum). We could have real technical exams if we want them.

The problem is, we don't seem to want real exams. We separate amateurs primarily by Morse Code speed into several categories, but we don't make much effort to see that they know the things needed to meet government concerns (which don't include Morse speed anymore since the last life safety service discontinued Morse usage). Today, we test the wrong things, and we don't even test those things well.

We *can* change that. We can make the tests real without a rules change. We can't eliminate the obsolete Morse test without a rules change, however. That'll have to wait until 1999. In the meanwhile, we need to be working with the VEC question pool committee to make the written elements real tests of things relevant to government concerns. The primary government concern is interference to other services. They address that with Type Acceptance requirements in other radio services, but amateur radio is unique in allowing radio transmitters to be built, repaired, and operated by amateurs, so those amateurs need to have the knowledge to do so correctly.

Since we don't want amateur radio to be saddled with Type Acceptance requirements, we need to demonstrate to the government that we know what we are doing. Just being able to parrot Ohm's Law won't cut it, though that seems to be the standard of excellence among many. Nor will being able to beep Morse Code quickly do it, though that too seems to be a measure of excellence by some. Rather, the applicant needs to understand the circuits that generate RF, and how they can go wrong to cause interference, and what to do about that when it happens. (At the beginner level, that may only consist of shutting down and calling for help from either a more knowledgeable amateur or the factory. At more advanced levels, the amateur should be able to solve the problem himself.)

Hello Ryan,

There is nothing wrong with the antenna. Ten meters is usually very
sparsley occupied during sunspot lows...but this does mean it's dead.
You will have to listen at various times , Im sure you will here others.
Don't be afraid to CQ once in awhile. BTW, there is plenty on activity
on the 80 and 40 meter novice bands.

>AHEAD of the one at 640 KHz. Any ideas?

This is probably an IFB (Interrupted FeedBack) transmission.
This is used to feed reporters in the field so that they
can hear the talent and actualities being inserted at the
studio during live broadcasts. The signal can be interrupted
by studio personnel for cueing purposes. If you monitor for a
while, you'll probably hear instructions being given to the
field reporter interrupting the program from time to time.

If you listen 5 MHz above this signal, you'll probably hear
the field reporter's broadcast if you're close enough to
his field location. The signal you're hearing is the output
of the station's remote broadcast pickup repeater, and its
input should be 5 MHz higher in frequency.

The reason the program feed is early is that the station is probably
delaying its main transmission by a few seconds to allow it to be
censored, a fairly standard practice by stations with call in programs.
We used to call this tape delay since it was done with a special
tape recorder, but today the delay is probably totally electronic
using digital memory. If the field reporter listened to the main
broadcast signal, the delay would hopelessly confuse him, and the
station couldn't give him cues either.

It comes around every few months on alt.folklore.military.

In 1957 I was halfway through an Infantry Signals Officers Course when
the British Army adopted the new NATO phonetic alphabet. The problem was
not learning the new one overnight, but forgetting the old one. In the
original NATO version, the letter 'N' was 'Nectar', but it changed to
'November' a few months later. I thought the whole thing ridiculous
until I was on an exchange detachment to the Norwegian Army and heard it
working just as well in Norwegian as it did in English.

Here, to bring tears to the eyes of old-timers, is the previous version:

Able, Baker, Charlie, Dog, Easy, Fox, George, How, Item, Jig, King,
Love, Mike, Nan, Oboe, Peter, Queen, Roger, Sugar, Tare, Uncle, Victor,
William, X-Ray, Yolk, Zebra.

Repeat after me the hallowed words: "Nan, Tare, Roger - Over."

Which is one of the differences between hams and CBers. CBers are
considered appliance users, and hams are considered experimenters.

That also explains why HF rigs can't be used on CB - they aren't type-
accepted.

: hofgren@kuai.se

There's a nice overview of telegraphy and the Morse code in chapter 2 of
"Morse Code, the Essential Language," by Peter Carron, W3DKV. It's
published by the ARRL. It starts with the Chappe telegraph, as does the
earlier posting in French.

Message-ID: <4f6a59$pl@news-2.csn.net>
Source record: 230907

Hi,

My call KB0TPL, and I'm looking to get
my morse down in the next couple of months to get my General
license. I passed the theory, but now need to study the morse part.
I'm looking for some software on the net that'll help me study for it.
Do you know of an FTP site where I could get software for this purpose ?

Send me mail at frank@echostar.com
Thanks and 73's

2018. why a license?

Why does a ham need to get a license? Don't people just buy transcievers and go on the air anyway?

Even if they do have licenses, what stops them from using bands they are not supposed to use?

Just curious on how this is all enforced...

I want to buy a CW filter for my ICOM Ham Radio.

This can be the 9 MHz series, like the

FL32 (500 Hz BW), or the
FL63 (250 Hz BW),

Or, the FL52A (500Hz BW) for the 455KHz IF.

These fit several of the ICOM radios. Mine is the 751.

How much?

Jerry W4UKU flanders@groupz.net

From: jlowman@netcom.com
Message-ID: <jlowmanDMDG6z.3o2@netcom.com>
Source record: 230913

We will be having a Special Event in the near future, celebrating the 50th anniversary of our radio club.

One of our members designed one of the nicest-looking QSL cards I have seen in many years of hamming. The problem is, they are in five or six colors. No printer in the local area can handle that many colors on one card.

Can someone suggest a QSL card printer who might be able to help us?

Thanks in advance,

de Jim - KF6CR

wdr@world.std.com commented:

>Total number of hams _is_ climbing, but the pool of
>key-bangers (not counting people doing CW via MFJ/AEA
>multimode controllers!), what are known in some circles
>as "Real Hams", could be declining.

If we can agree that General, Advanced, and Extra are
"key-bangers" (or at least qualified to bang a key)
then the answer is that they are NOT declining.

In the five years prior to "no-code", those classes
(in aggregate) grew by just about 8,000.

In the almost-five-years since "no-code", those classes
(in aggregate) grew by almost 46,000. In other words,
there has been an acceleration (by over 500%) in the
growth rate of "coded" hams. I feel much of the credit
goes to the "codeless" entry which has given newcomers
a taste of our service, and apparently many of them like
it well enough to move to the next levels.

Hi, Gerald!

GC> 18 AWG stranded wire is found in most any automotive parts store.
GC> Suppliers such as Radio Shack do not carry this size wire. Many of t
GC> failures came from people "one stop shopping" using smaller wire or
GC> wire that R'S. carried rather than purchase the larger "automotive"
GC> stranded wire.

Radio Shack does carry 18 AWG wire...speaker wire, available in 30',
50' and 100' rolls. The 30' and 100' rolls are rated for "in-wall" use,
which means the insulation is more flexible and less likely to crack.
The 50' roll is clear-insulator speaker wire which I don't reccommend
for a permanent installation...the insulation can crack after a couple
of years.

Hi there. I am brand new to radio stuff. I have had a thing for starting a radio communications program for some time now. Up until now it had been fueled by the Pump-up the Volume movie and the Radio Free Berkley stuff.

I am interested in finding out what I need and the purchasing it. I am not into electronics and do not have the time therefore I want to purchase pre-built items.

I am interested in broadcasting on AM and/or FM with a range of about 10 square miles (less if needed or not possible). I am looking for somewhat small efficient equipment (I do not want a 25 foot antennae and a refrigerator size box of broadcasting equipment)...

Additionally I am interested in packet-radio and radio based slip stuff. I am not licensed and do not really care to be - BUT if necessary I will consider such.

Anyone wanting to share their wealth of information or wanting to direct me in one direction or another please feel free to mail me.
-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-

Hi Bob:
I have a '95 SL1 and I've run 130W HF with one of those tripod magnet
mounts. (Powered with another BIG car battery on the floor. :-)
I haven't tried Hi-Po VHF yet, but no problems on HF either..

Most likely a cue circuit to a remote unit or traffic
helicopter. The 20 second delay on the 640KHz transmitter
could be to allow killing call-ins who don't behave. I
don't know what KFI's format is these days but if they
engage in "live" local talk radio with call-ins, some
reasonable delay is normally provided to allow the sensitive
ears of the easily offended to be protected. It also helps
prevent law suits.

2039. Open freq. at Vail?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-06 00:00:00 UTC
From: cclsc@glink.net.hk

Source record: 231014

Hi,

I am pretty new at this amateur radio thing and was hoping that
someone can help me out by answering a few of my questions.

We just bought a couple of ICOM FM transceivers and would like to
bring them to Vail, Colorado while we go skiing. The default frequency
is set at 146.01 Mhz.

I assume that I need to program in a few different frequencies in the
different channels so as not to interfere with other people in the
area. Does anyone know what frequencies are available (open) for use
for recreational purpose in this area?

Also, I have come across the term "repeater" whereby the transceiver
transmits and receives on different frequencies. Can anyone tell me
what a repeater does? And how do I go about finding out this "offset"
frequency in the Vail, Colorado area?

I would really appreciate some feedback. Thanks in advance :)

Hi Ryan:
What you might try is listening around the 29.4 to 29.5 area. This is
where you can hear the HF satelites. There are a few. Usually you will hear
some very fast code (telemetry) on 29.403~29.408.. When that starts getting
strong, you can hear code and SSB from there on up to almost 29.5. You can't
talk to them but they're fun listening to, and it doesn't take skip. This way
you know the radio is working.. Sometimes it is REAL dead.
Hey, you around Jersey? 7:00 or 8:00PM Sunday evening there is a "Get
Together" on 28.380. It's called the "Monday Morning Net" (zulu time) Fell
free to drop in!

Hi:
Not to change the topic, but you inspired a memory when I use to have
an 80 meter dipole in my bed room/ham shack. Was a bar antenna about 6 inches
long with as many turns of wire I could put on it. I placed this directly in
the middle of two pieces of 4 foot wires (or so). Then an open piece of coax
with a one turn loop over the load, like a primary. The SWR's were flat for
about a 5 Kc band width! But the thing shot little flames off the ends of the
wires!

Ryan - congratulations on your new license! Yes, the band is VERY flat.
10 meters is the band which is most highly dependent on sunspot activity
of all the HF bands, and right now there are essentially no sunspots. Thus
the only skip on 10 is short-skip in the states, and occasionally some
DX from south of the equator. No Australians, no Europeans and probably
no Africans. What activity there is will mostly be heard during the hours
of brightest sunlight, when you are probably at work.

No, you've probably not done anything wrong except get your license at
the bottom of the sunspot cycle. The best way to remedy the situation
is to upgrade so you can get on the low bands. Get on 40 and 80 CW
with your R7, get your code speed up, pass 13 wpm and then get on
15 and 20 SSB, especially 20 which will survive any level of sunspots
(or lack thereof!) Good luck. 73 - Alan NS0B

Hi, Ryan:

First off, congratulations on the upgrade. You've opened the door to a wonderfully exciting world. You're already hard at work on 13wpm, right? Just stay with it, keep up the 20 or 30 minutes a day, and you'll be there in no time.

Yep, 10M is pretty quiet most times these days. But there are probably lots of folks just like you, listening to a "dead" band. Don't be afraid to throw out a CQ or two. You may be surprised at the result!

I looked up your call, and see that you're in the Cape May area. I'm up in central Jersey. Maybe we can set up a sched sometime. You can work on your code, I can work on mine, and maybe I'll get a QSL card for Cape May county out of the deal (I confess, I'm a County Hunter....).

Anyway, good luck with your new privileges. You're gonna' luv it.

73.

All I want and NEED is one satellite contest. It should be international in scope and sponsored by AMSAT. It will take place during Field Day.

WHY?, Because field day is the best opportunity to show-off our part of the hobby to other hams. The first priority of the contest would be the display and use of an OSCAR station to others(Portable operations most likely required). Second priority, make QSO's & have FUN!

That's ALL I want. One 24 hour long contest and to recuit more hams into AMSAT. One little 24 hour contest shouldn't tax our satellites batteries too much.

And who knows, maybe they'll like satellite operation so much, that they'll make a Phase 3D donation right on the spot. ;-)

>
hay, read the ARRL SUGGESTED bandplan for '2' and you'll see the one meg splits have been suggested for years. (please note you must read the whole plan for 2.... The first page is a bit misleading.) No one is suggesting .52 or any of the 99% vacant frequencies around it.

I megs splits are nothing new and the 3 or 4 possible legal channel pairs hardly conflict with any significant amount of simplex space.

FYI, 1meg pairs have been around since before 1978 when i first got on 2 meters.

Can anyone recommend a retail source for a small quantity of Nickel Metal Hydride batteries (standard AA penlites, without tabs). I've tried a whole bunch of different places without any luck. Battery World carries them but won't accept small orders under 100 pieces! Tauber Electronics has them, but only sells them in assemblies for ""approved"" devices. Any leads appreciated...

Best Regards, John

>Abe, KE6OCM

Hi Abe.

It is most likely a link transmitter, or remote site. I too have ran
across a few of these here in Columbus. On one occasion, my favorite
FM station was on remote, and I found their link freq in the 160 MHz
range. It was pretty cool being able to listen to my favorite station
with my HT.

BTW, the delay is for "guest control". When interviewing someone on the
phone or in person, this time gives the station time to "bleep" any foul
language and such.

Take care, & 73.

>Just curious on how this is all enforced...

In theory, the FCC monitors the amateur bands and enforces the rules. Back years ago, most amateurs knew someone who had gotten a "pink QSL" from Uncle Charley at one time or another, and everyone thought Uncle Fed was always lurking ready to pounce. In practice today, with the recent government cutbacks, they don't do a lot of that unless their attention is drawn to it by complaints from licensees.

Many hams *will* complain, however, they are almost paranoid on this subject. They tend to check up to see if you're really licensed (there are callbooks, paper, CDROM, and on the internet, listing the call, class, name, age, and address of every legal amateur). If you turn up bogus, they'll try to DF you and turn you in. Some are quite good at it, especially on VHF/UHF. (We have a group here who are quite good at tracking down malicous jammers, unfortunately mostly they turn out to be licensed, and holding higher class licenses at that. The DFers will turn out for bootleggers too when they have good reason.)

Amateurs are immediately suspicious of stations that don't identify *a lot* (most amateurs ID incessantly). When a new voice appears on my repeater, I usually check him out with the database. If things don't seem to fit, I get curious. I once conned an obviously young fellow sporting a W4xxx call sign into meeting me at a local shopping mall by pretending to be interested in buying his radio. Of course the radio was stolen, and of course the young thief wasn't licensed. (And of course I took a friend of mine who is a police officer along with me.)

Now a bootlegger can often get away with operating HF for quite a while if he operates carefully, practicing very good operating practices, and observing all the rules for the class license he's pretending to have. If he's stealing the call sign of a legitimate station, however, he may still find himself tripped up because stations he contacts will send QSL cards to the *real* licensee's address, and that's a red flag. The real licensee will often pass the word around, and perhaps contact the FCC (to protect

his own interests in case the bootlegger is doing something
that attracts the FCC's wrath).

Hams have a nickname for bootleggers, they call him "Slim", after
a particularly famous bootlegger. Recently, Slim has been bootlegging
my call on HF. I've received a number of QSLs for his contacts.
If I were an awards chaser, I could claim an award thanks to Slim's
operations on my behalf. :-)

But I'm not an awards chaser, and I don't operate in the modes
Slim has been using, so I sent copies of the cards to the FCC
with a cover letter explaining the situation. They've promised
to be alert for this Slim at the monitoring stations. And the
FCC's DF techniques are *very* good. Slim will probably tire
of bootlegging my call before the FCC hears him, however, so
he may not get caught this time. (This isn't the first time
a Slim has used my call sign, I've gotten bogus cards before.
Slim has been with us for a very long time.)

Since a bootlegger can't participate in the contest and operating
awards games because the cards will go to the real licensee, and
doesn't dare make any real friends over the radio for fear of
discovery, the thrill tends to wear off rather quickly for most
of them.

Bootleggers usually trip themselves up on the air sooner or
later if they persist. Either they'll run into someone who knows
the real licensee, or they'll let something slip that rings alarm
bells in someone's head, or they may even run into the real licensee
himself. Sometimes that might even happen in person.

A friend of mine had that happen to him at a hamfest several years ago.
He came face to face with a fellow sporting the same call sign badge
as he was wearing. (Yeah, that was really dumb, but if bootleggers
were smart they'd just get a legitimate license). Anyway, my friend
is rather large and has quite a temper, and Slim didn't leave the
hamfest in very good condition. That's an extremely unusual case,
of course, most bootleggers are smart enough to know that they are
in danger of that kind of discovery at a hamfest or other amateur
gathering and try to keep a very low profile if they attend.

Once back in the 1970s I got a phone call from a Dxer friend who
heard Slim working Dx using my old WA4VJZ call, but actually giving
out his own Indiana mailing address. At the time that was a real red
flag since he should have had a 9 land call sign in Indiana. A quick
call to the FCC monitoring station and we had that sucker nailed.

Using another ham's call is like using his name. He isn't going to
like that, and will take every step he can to see that you're caught
when he finds out about it.

Gary

Totally agreed!! I have purchased 2 filters by DCI and had the VHF one
installed in my car, between the radio and a Maldol ARD-10B which has
3 dB on VHF (5/8). Still I can hear some intermod (or whatever it is)
near paging TXR with FULL squelch! I have talked to my local dealer,
Icom Canada service and Icom America service, all told me there are
no mods, no tuning can help it, this is how it is. (Not as bad as I was
told at the dealer when I paid for it). I exchanged this from the
FT-5200 I bought because I don't like the lack of features on 5200.
Ironically I am using a Yaesu FT-2500M at home because I can't fit it
in my car and pursued a seperate head design. What disaster. I think
the only good fix is the Sinclab cavity filter but it will also cut off
the extended receive to null (now I am still ok at out band except as
high as weather ch.)

>2) Bad design of control head. Where small PCBs that hold the knobs
> connects to the display PCB, high failure rate during cold weather

Yes, broke weeks after my warranty expired. Thanks to nice local dealer
tech. who offered to fix it no charge (and it helps since I know him.)

>3) Crossband repeater has such bad squelch crashes (independant of squelch
> settings) it's unusable.
>
Haven't played too much yet but so far so good. You do have to set the
squelch up a bit more than noise level.

TIPS: There are possible 174 memory available not counting VFO or scratch
pad. You can enter max. 80 memories on each band by splitting the 100 ch.
and it won't get destroyed after splitting differently later, so to retrieve
them, just re-split the 100 ch. ratio again. I have tried briefly and it
worked. According to manual, the memory should stay. The extra ones are
1A,1B to 3A, 3B on each band, and Calling ch.

For all current owners of ACC equipment (Advanced Computer Controls), there is now a listserver remailer operated by the same folks who operate the LINKCOM remailer...

To subscribe, send a msg to "majordomo@engrng.pitt.edu"

In the BODY of the msg, put ONLY the following:

subscribe acc
end

Then make a note as to WHY you want to subscribe....if you are an owner of ACC gear, state it and mention model and S/N if possible....OR if you are part of a group that operates an ACC system, note that...

This remailer is for ACC operators only....PLEASE do not try to subscribe if you dont own or maintain any ACC equipment...bandwidth is limited...

Linkcom's remailer is at the same site...use the same format as above but in the body of the msg, use "subscribe link"

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 07/2330Z FEBRUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 07 FEBRUARY AND FORECAST FOR 08 FEBRUARY - 10 FEBRUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 06 Feb
Daily Proton Fluence >1 MeV: 4.9E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 1.0E+07 (normal)
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
08 Feb 09 Feb 10 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 08 Feb: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 06 Feb
Learmonth 8 2121 3322
Fredericksburg 7 3
Planetary 5 3

Observed Kp for 06 Feb: 1100 0121

2B. MAGNETIC FORECAST
Date Ap Conditions
08 Feb 7 Quiet to unsettled
09 Feb 7 Quiet to unsettled
10 Feb 10 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
07 Feb Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
08 Feb Normal Normal Normal
09 Feb Normal Normal Normal
10 Feb Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
07 Feb 14

Observed Australian Regional MUFs:
Townsville: Near predicted monthly values.
Sydney: Near predicted monthly values.
Hobart: Near predicted monthly values, with spread F during
local night.
Darwin: No data.

Predicted Monthly T index for February: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
08 Feb 10 near predicted monthly values
09 Feb 10 near predicted monthly values
10 Feb 15 near predicted monthly values

I need help in finding specifications, schematics, and modifications for Vhf Engineering 2 meter amplifier and accompanying power supply. Vhf Engineering was originally in Binghamton, N.Y. but have either moved or gone out of business.
The model amplifier is PA140/10 and the power supply is a Model 24C
Any help at all would be appreciated. Thank you.

I remember getting a post card from an ARRL volunteer monitor for being out of band as a novice in 1973. It looked official and embarassed the hell out me. I had no idea that my old Heath VF-1 was drifting a mile a minute. Whatever happened to the ARRL monitors?

Pity the FCC. They have responsbility to monitor 3000 times (aren't commercial services closing in on 100 Ghz?) more frequency.
To listen for violators, you have to use judgement. Judement means people. People means funding.

Hi Gary.

Well, as I mentioned in the Web page, stacked half-wavelength slots *MAY*
work better. Some friends of mine are working on just such an antenna.
When construction and testing is complete, I'll post a follow-up. But in
the meantime, I thought it might be interesting to show what the actual
patterns of WB0QCD's Alford Slot antenna REALLY look like in case there
is someone else already out there with a better design.

As reminder, the page showing the measured performance of the WB0QCD Alford
Slot antenna is located at:

http://www.njin.net/~magliaco/slot.html

The Alford-Slot antenna is a horizontally polarized, omni-directional antenna
system that is popular for ATV and ATV repeater use on the 70-cm band.

: Hello All,

: I am going for three months to India, I like for the time i am in India a Guest CALL sign.

: How is the procedure to get a quest call.
: Maybe somebody knows an contactperson

The first place to check would be your national amateur radio organization in The Netherlands, they should have the information available, even if you are not a member..... The American Radio Relay League handles that here in the US..... I have been to India several times, but never long enough to worry about operating from there...

Good luck!

Thanks for all the responses, most of which cam by e-mail. I was interested in how well the FCC enforces its licensing laws, for I see a time when all Internet users may someday also need a license.

I was disturbed, however, by the impression I received of ham radio being a place where everyone is checking up on you. This eagerness to bust vagrants, by reporting them to the federal government, smacks of vigilantism, and certainly would make one paranoid about going on the air. Now I know that if I get a license, pony up the considerable amount of money for a rig, and go on, my first contacts will be made with people who are probably diving for their call book, making sure I'm clean. I hope their call book is up to date!

While breaking the licensing law violates the spirit of professionalism and exclusivity of ham radio, I don't think that spying on fellow hams is a good solution to the problem. Shunning would work far better. Ham radio has enough of an air of extremem conservatism (witness the editor of 73); why compund it by acting like agents in a polic

: Hi,
:
: I got a Yaesu FT 767 GX, with 144 Mhz unit. It's a good rig, expecially
: for
: the coverage of all bands.
: The 2m unit works till 145.999.
: My question is: how to extend till 147.999 ?

Yes. Hold the MCK (2) button down while turning on the rig. That should change it to 144-147.99 mhz operation unless they've done something on your unit's filtering to restrict it otherwise.

: The same problem is on the other unit (430 Mhz)!
:

Well, holding the AC (0) button down toggles it from 430 to 440 on the display, but there *ARE* component changes inside the module which prevents operation outside the original band. Even though the display may say 440, it's still operating on 430. Sorry.

: It's also possible to extend TX capabilities ?
:

The 2M change covers both Rx and Tx. I believe Yaesu has these different band restrictions for different world markets. I am not aware of what the restrictions are in your part of the world, so be careful.

Enjoy,

Greg KO6TH

> Need Mod for Kenwood TS120s for wide recieve, if one exist?

Frank-

I see that Amateur Electronic Supply still lists the IF filters for the TS-120S, but under the R-5000 shortwave receiver. The only filter wider than the stock filter, would be the AM filter, YK-88A-1. I expect this filter would be very poor for sideband reception, but might pass some kind of wideband data successfully. As you're aware, the TS-120 does not have AM capability.

If you really mean wide frequency coverage, rather than wide bandwidth, you're out of luck. The TS-820 had auxilliary bandswitch positions for adding additional 500 KHz frequency segments, but not the TS-120S. I haven't seen any information on the net, or at any of the Mod sites, that would help you convert existing segments to other frequencies.

Warren-

There are different levels of type acceptance. As I understand it, any radio, or other device that uses radio signals, must be type accepted under FCC Rules Part 15, before it can be manufactured for sale. This has to do with incidental radiation of signals, such as from the receiver's local oscillator. There are other parameters that a Ham transmitter must meet, such as harmonic attenuation. However, I don't know if that is part of the type acceptance procedure.

You're right about CB sets, as well as radio transmitters that operate under other parts of the FCC rules. Transmitters for other services must be designed so the operator can't possibly screw up. Ham equipment isn't required to be type accepted to that extent. It is still the Ham's responsibility to transmit inside the bands allowed by his/her license class, and to use the proper mode for the band segment in use.

2093. cheap 9-12v. HT power supply

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-07 00:00:00 UTC
From: gclyde@well.sf.ca.us
Message-ID: <4fb9og$rqe@nkosi.well.com>
Source record: 230954

Has anyone found cheap and easily portable 9-12v. power supply to run an HT (without battery), without serious hum problem? I am hoping that there might be one at Radio Shack, K-Mart, etc. that people have used with success (before I shell out $20 or so). I would be using in with a Yaezu FT-530, but I am sure any HT would have the same results.

Please post response here or e-mail. Thanks gclyde@well.com (KK6JK)

>73, de Hans, K0HB

This is of course a very welcome and positive take on the statistics. Much preferable to the one Newsline took. However the only way to move to the next levels is by this method. The fact that people are upgrading this way is not proof in itself that they "like" upgrading that way. Perhaps a better measure of prefrence would be to provide an alternate method by which to upgrade. A subsequent comparison of the statistics would then be more revealing. That the service has an obvious attraction, and provides incentive to upgrade should go almost without question.

Another point: Lets be careful about measuring the success of the amateur service by looking principally at the number of "coded" hams. One of the main points of contention around here is the importance of code to the amateur service. While recognizing the importance of self improvement in our hobby/service, there is an important distinction between technical competance and manual dexterity. To measure the quality of the service by how dexterous we are, we perhaps sell ourselves a little short.

Otherwise though, it IS encouraging to see that hams continue to upgrade "even though" they came into the service without code.

: E Martin

--

Well, the answer is that it is NOT enforced by the gov't (FCC), who mostly feel they have better things to do.

But it is enforced in a way. Consider this: you go to Rat Shack and buy yourself a 2M handi-talkie, and start bringing up repeaters.

The first thing you realize is that you have to have a call or else the hams on the band will very rudely ignore you as a bootlegger. So, you pick a call, like, say: F2AYY. Suddenly, you have people calling you to find out what the weather is in France, and where you live there, and how long you will be in the states. You may affect a french accent, but you realize that there is little future in using THAT call!

So, next, you avoid that pitfall by finding out that calls in the US start with A, N, K, or W, so you make up a call like: KG6YBN. Now, though, you have people who pay attention to the sequence in which calls are awarded, and you get comments like: "sounds like a new ham, I didn't know they were up to the KG's already." If you are obnoxious or don't sound like you know what you are doing, this call can generate some suspicion, to say the least. Then people will ignore you, and if your goal is to talk to folks, you don't acheive it that way.

Likewise, you don't want to pick a call that's already in use by someone else, for (unless you VERY cleverly look up a call that's at the other end of the state from you), you could have the embarrassment of hearing: "KN6YU? Kim, is that you? Do you have a cold, or are you using a new radio? It sure doesn't sound like you!" Not to mention the legal problems you would get from me if I found out you were using my call; I think I could make your life miserable legally in such a case.

Finally, if you DID pick a call in use, and it was owned by a person who lives too far from you to worry about, and proceeded to make friends on the air, think what would happen when someone wants your home address, and looks the call up in the callbook, only to discover that the call

belongs to someone in Dead Horse Forks, CO, and not anywhere around here, and the name doesn't match, either. Instant discredit and suspicion, and the word spreads; no one will talk to you anymore.

That's what would happen if you really wanted to talk to people on the air; you might get away with it for a time, but eventually it would catch up to you.

Now, if what you want to do is jam repeaters and make an obnoxious nuisance of yourself, you run some worse risks. One guy in our area was fined and had all his equipment confiscated by the authorities; even that didn't stop him, so he ended up in jail eventually, and I haven't heard from him for a year or so. He annoyed a lot of people, and eventually, even the Gov't will deal with such a situation.

But a more immediate risk is: you get DF'ed, and some night when you are tying up a repeater and generally wrecking havoc on the local repeater, a group of big guys with baseball bats come, winkle you out of your house and beat you up pretty good, and smash your equipment. I don't condone that, but it's been known to happen, and if you're arrogant and obnoxious enough, it might happen to you.

Most likely, though, is that you will be ignored completely (at least if you're on the repeater I use most). Your presence will not be acknowledged in any way. If you like talking to yourself, go ahead. But most creeps who do this are looking for validation from an audience, and they tend not to hang around our repeater very long, because they don't get it from us.

So, if you want to talk to people, it's probably simpler to get the license.

I use electrodynamics every day. It's a reliable means of approximating the
shape of the lobes off of the ends of my antenna, and you may appreciate
the value someday if you ever wonder why you can hear someone over >there<
but not over <there>.

If you ever find yourself in a collapsed building, you're more likely than
not going to have bigger problems than either Morse Code or
electrodynamics.

Hmm.. Can't find a clear one? Maybe there are too many packet stations on them..

>The 2 meter band has uses other than voice repeaters, even if the coordination
>councils don't pay too much attention to them.
>
Oh i agree! That's why the machine on 146.415/147.415 in N.Ct is packet only. The only voice it repeats in the interference from guys talking on 147.42 in R.I... (yea yea, they've been asked to move, but refuse...)

Ya know one of the reasons the simplex channels are so crowded on 2 is the growth of packet over the past 10 years. The problem is that simplex packet doesn't work very well... As soon as more than 3 or 4 packet stations get on a single simplex freq it starts to deteriorate. Once you get 10 or more it is almost unusable. This gobbles up the free simplex channels pretty quickly! As packet ops are frustrated by the mode not working they keep expanding the number of channels where packet is 'acceptable'.... Ah.. squatters rights.... Packet repeaters ease this situation a bit. Maybe giving up a couple of your optional repeater/simplex freqs would gain you some space in the simplex area in the long run.

I have two Kenwood 732s and an Icom 2350. The Kenwoods are, by
far, much better atI/M rejection than the Icom.

Don't kave any experience with Yaesu .... but .... a local
reports it worse than the Kenwood.

Make no mistake, I/M does and will exist. You must either use
CTCSS or learn to live with it.

2103. More "FleaSpeak"

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-08 00:00:00 UTC
From: w9gr@psyber.com
Message-ID: <4fdkik$coh@warez.psyber.com>
Source record: 230841
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap

What follows are the contributions of Dave, W9GR, and Curt, K9CH,
to the "FleaSpeak" interpretation of ham flea market vernacular.
This thread was started by Jim, W8ZR.

++

"This rig puts out a BIG signal!" (The rig flat tops and distorts so bad,
your signal will be at least 50 kHz wide!)

"The signal quality of this rig was easily recognizable in its day." (The
high distortion and bad audio quickly identified this rig.)

"This rig has wide frequency coverage." (It drifts up and down the band, and
sometimes drifts out of band.)

"The tubes used by this rig are worth the asking price." (The rig uses a rare
7360 beam deflection tube for a balanced modulator, but it's blown so you'll
have to spend $80 to get a new one.)

"This rig will bring back the feelings and atmosphere of vintage ham gear."
(The bypass capacitors to the AC line put enough voltage on the chassis to
give you a shock in the lips through the microphone, and it smokes so bad
when you turn it on that you'll probably start coughing and wheezing.)

"This is a really good CW rig." (It doesn't work on SSB.)

"This is a really good SSB rig." (It doesn't work on CW.)

"This is a really good rig." (It doesn't work on CW or SSB.)

"The transmitter is outstanding." (It doesn't receive.)

"The receiver is really hot." (It doesn't transmit.)

"This rig is really hot." (It is stolen.)

"It seems to be a vintage regenerative type." (It oscillates.)

"Frequency stability is great." (The VFO doesn't work - you'll have to use
crystals.)

"I just retubed it." (Got 'em from questionable used tube stock.)

"I just aligned it." (All the slugs on the transformers are now snugged
down real tight.)

"This is the rig of my dreams. I really wanted one of these as a kid, but
now <snif> I've got to let it go." (As I've gotten older, I've learned
what a hunka junk it is.)

"Real popular rig in its day." (Yeah, there were whole HF nets on the repair and maintenance problems.)

"I'd keep this baby, but my wife is making me clean everything out." (I finally got around to giving this thing the proverbial heave-ho.)

"QST gave this one a really great review." (The language in the article broke literary ground for profanity.)

++

For the sake of completeness, here are the original contributions from Jim, W8ZR:

The boatanchors email exchange has been discussing flea market language, and how to interpret it. I thought the discussion might be worthy of a larger audience, and encourage you to join in with your own observations. Here are my own examples of "fleaspeak:"

"I don't know if it works." (Translation: it doesn't work, probably never has.)

"It might need a bit of tweaking." (Translation: Marconi himself couldn't fix it, much less align it.)

"It was used in government service." (Translation: after the govt. technician tried to solder the loose connections with an acetylene torch, it was stored outdoors on a wooden pallet during hurricane season.)

"The dial drive may need lubricating." (Translation: the gears are stripped and all the setscrews are hopelessly frozen.)

"I plugged it in to check that it lights up." (Translation: the light came from the two foot high flames.)

"It doesn't chirp." (Translation: it doesn't chirp because it doesn't transmit.)

"The audio sounds great." (Translation: the 60Hz buzz is faithfully reproduced.)

"I'm selling it because I have two of them." (Translation: I'm getting rid of my parts radio.)

"You won't find one at a better price." (Translation: "Better," in this case, meaning from the point of view of the seller.)

"There are a couple of other people interested in it." (Translation: someone sat on it to tie his shoelaces while walking past the table.)

"This has become a collector's item." (Translation: the manufacturer went belly up six months ago and won't honor the warranty.)

Respectfully submitted,

Jim W8ZR (a sadder but wiser flea-market afficionado)

How to understand the flea-market seller.
Respectfully submitted, in the never-ending quest for flea market honesty:

"You'd better buy it now, because I'm leaving soon." (Translation: The previous buyer and his brother, Guido, are heading back toward the table and they aren't smiling.)

"It came from an estate sale." (Translation: If you have any problem take it up with the owner.)

"I had it on the air just last night." (Translation: And you thought the "woodpecker" was gone.)

"I only use it for ragchewing with friends." (Translation: He was the guy on 3898 whispering "Rod....neeey" into the microphone for two hours.)

"I just had it serviced." (Translation: his kid brother opened the lid and sprayed WD-40 over all the wiring.)

"It comes with the original box." (Translation: Just brush out the kitty litter and hold your nose when you open it.)

"Better buy it now, cause it won't last." (Translation: none needed.)

There is a long tradition of self-enforcement in the amateur service. Basically, most hams are honest and follow the rules on their own. There are always a few who don't, but my response is to just not work them on the air. If everyone did that, they'd get bored and go away. If you want to buy a radio and bootleg a call, there's really nothing to stop you. It's wrong and self-defeating, but if you mind your manners on the air you can probably get away with it for a while.

If you behave badly enough to attract the attention of the FCC and the FBI (it's a federal offense) they'll find you by direction finder, show up at your house with a warrent, confiscate your equipment, and arrest you. The fines they've been handing out lately have been around $5,000.

Do yourself and everyone else a favor and earn yourself a license.

Mike, N4PDY

Say Roger,
Most of the hams that are for keeping the cw requirement could blow you
away with the amount of technical knowledge they have. You forget, they
took their tests at fcc regional offices. Those tests are NOT easy. I
know from experience. B.

Roger Books (books@rtssec1.dms.state.fl.us)
wrote: : Jeff Stillinger (js@ibbs.av.org) wrote:

: > So we get rid of CW. What is next? How much easier do people want it to be
: > to get a license? Morse is required, so just do it. Oh I forgot that is a
: > bit of work. We would not want to work for our reward.

: > This whole anti CW thing is a reflection of what is happening everwhere.
: > Construction contractors and truck drivers don't want to test for a license
: > either. Why? Because they are lazy and have no desire to devlope skills.
: > The same can be said about ham radio. The anti-CW people are just pissed
: > because there are people like me who demand they work for a license. Learn
: > a new skill, and then use it.

: > For those of us that do use CW and enjoy it. Brag about it, you have a
: > skill that was work to get and some folks don't have.

: Well goody for you.

: Let me put it this way. Many people are never going to use CW. The work
: required to learn CW is pointless. Do you enjoy pointless? I think you
: should have to learn braille in order to get you license. It makes just
: as much sense.

: I don't know why I'm jumping in here, the old "I had to do it so you
: should have to do it also" is a rather shortsighted attitude. It goes
: to show that improvement of ham operators is the least of your worries,
: you just worried someone might get the priviledges with less work. On
: the other hand... I get the fealing that alot of CW proponents are afraid
: that they wouldn't be able to deal with real competance tests. If CW went
: away you might actually have to demonstrate theory competance with a
: non-gimmee test.

: So, is it better to keep numbers down via ancient skills that are unnecessary,
: or is it better to force people to develop modern, relevant skills?

: As for those that want the CW frequencies, that's fine, those people can
: learn morse since it will be relevant to them. I would be all for
: maintaining those as pure CW.

: Roger
: (Same one that had the fight about the "computers in society" class. I
: enjoy learning new things, but I HATE wasting my time.)

2108. ARLD009 DX news

ARLD009 DX news

ZCZC AE51
QST de W1AW
DX Bulletin 9 ARLD009
From ARRL Headquarters
Newington CT February 8, 1996
To all radio amateurs

SB DX ARL ARLD009
ARLD009 DX news

This week's bulletin was made possible with info provided by Joe, NJ1Q, Tedd, KB8NW, the OPDX Bulletin, and Contest Corral from QST. Thanks to all.

KERMADEC DXPEDITION UPDATE. Permits, licenses and equipment have been obtained. At news time, 18 out of the expected 20 possible operator positions have been filled. The vessel to be used will make brief stops at Crozet and Kerguelen and the team might be able to operate from these islands.

HEARD ISLAND, VK0. A major development in this operation is that a suitable vessel has been secured, the Marion Dufrensne. This is a no-nonsense vessel which can sail and work under weather conditions in the polar regions.

VIETNAM, XV. Listen for 3W6YL by JA3UB, JR3MVF and JH3GRE starting February 9 and be active to the 16th. QSL via JH3GRE.

CHATHAM ISLAND, ZL7. Besides the upcoming operation by Barry, G4MFW, mentioned in last week's bulletin, Antti, OH2BTB/OH5TB should be active February 9 to 16. QSL via OH5TB.

COCOS KEELING AND CHRISTMAS ISLAND, VK9CR/VK9XY. DL8WPX, DK7YY, DL3DXX and DL7UFN are active from Christmas Island signing VK9XY until February 12 and again February 23 and 24. Operations from Cocos Keeling Island will run from February 13 to 22. They will operate CW and SSB, on 160 through 6 meters and some satellite activity. QSL via DK7NP.

NETHERLANDS ANTILLES, PJ9. Jack, W1WEF, and John, W1BIH/PJ9JT, will be operating the ARRL DX Contest as multi-single, using the call PJ9C. QSLs for this operation go to K1CPJ.

ANGUILLA, VP2E. Will, AA4NC, will sign VP2EN February 12 to 20. He and KI4HN will be in the ARRL DX CW Contest. QSL via AA4NC direct w/SASE. Bob, W5EUQ, and Bill, W5SJ, will operate as VP2EEU and VP2ESJ, respectively, February 6 to 13, concentrating on 160 through 20 meters. QSL via home calls. Stewart, KC0ZC as VP2ES, Glenn, WA0PUJ as VP2EZ, and Loring, N0ZSU as VP2E, will operate February 28 to March 5. QSL via home calls.

MONTSERRAT, VP2M. Art, WA2UJH, has had a change of plans and will now operate February 14 to 21. He will be on 160 through 10 meters. QSL via NW8F.

KUWAIT, 9K2. Hamad, 9K2HN, requests all to only QSL via Hamad J. Al-Nusif, PO Box 29174, 13152, Safat, Kuwait or via the bureau. HH2HM/F no longer handles cards for 9K2HN.

QSL INFO. W6JOX is NOT manager for HP2CWB or CO2JA. QSL HP2CWB via WT3B. QSL CO2JA direct.

Came across some interesting pages on the Blackbeard project. This
appears to be some sort of global monitoring of radio transmission
frequency spectra. Anyone know what was originally behind this project?
Was it genuine research, or a SIGINT project?

2111. Power connector for Standard C5718DA?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-08 00:00:00 UTC
From: benjy@benjy.cc.vt.edu
Message-ID: <4fd4vs$sea@solaris.cc.vt.edu>
Source record: 230849

Does anyone know the manufacturer, part number, availability, and source for the power connector on the Standard C5718DA? I asked Standard and they didn't have any information. Their suggestion was to buy a 5m power cord (CAW575) and cut it down. So, if I can't track down the connector, I'll probably just remove the current connector and put on a connector that I can actually purchase.

If you have any information on the power connector, please e-mail me.

In article <4f8826$h9b@news.ecn.bgu.edu> uedmarti@uxa.ecn.bgu.edu (Eric Martin) writes:
>Why does a ham need to get a license?

It's like having driving licenses, you need to be confident that when you go out on the road that the other drivers will stay on their side of the road and that they know that have to do certain things to allow sensible use of the road by other people and that they don't do other things.

Hams have enormous privileges not given to any other group of people who use the spectrum - we are allowed to design and build almost anything we like (the only real limitation being power output and that isn't a real limitation, most people start running out of money at about the 1KW level), and not have the equipment checked out by the govt before putting it on the air. To have that privilege the govt asks us to show enough knowledge to demonstrate to them that we can do that and not interfer with other users of the spectrum. So we get a license. After that the govt lets us alone and we are basically self policing through a long established ethic that we keep a clean ship and we use amateur radio as a service to society. The service takes the form of self training (we educate more people about electronics) and in such things as emergency communication.

>Don't people just buy transcievers
>and go on the air anyway?

Yes they do. But this is a relatively new development in amateur radio. Even at the lowest grades of licenses a new ham is still allowed to design and build their equipment, so they still need to demonstrate some technical ability before going on the air.

>
>Even if they do have licenses, what stops them from using bands they are
>not supposed to use?

Nothing. However their is a strong ethic of not fouling your own nest and in order to protect their own licenses other hams will do something about it, starting with trying to educate you that this is not a great idea. Anyhow who are you going to talk to out of band, there aren't any hams there, only broadcast stations or TV stations who aren't going to reply to you.

Hi Gang,
probably in March I will try to get my US ham ticket at a test session here in Germany.
Now I'm looking for a friedly and reliable US ham providing me with a US mailing adress.
I'm 41 years old, ham since 1977, active mostly in CW on hf bands. I'm married, no kids, three cats and working as a regional sales manager for a large German pharma company. Other hobbies: motorbiking, travelling and scuba diving.
If you think this would be a good idea for you, send me your email please.

ARLX005 Hams test Army station

ZCZC AX51
QST de W1AW
Special Bulletin 5 ARLX005
From ARRL Headquarters
Newington CT February 7, 1996
To all radio amateurs

SB SPCL ARL ARLX005
ARLX005 Hams test Army station

Hams are helping a Bosnia-bound US Army mobile AM radio station in Fort Meade, Maryland, test its broadcasting capabilities. The station, assisted by a group of Amateur Radio AM enthusiasts in the Washington, DC, area, seeks reception reports. Fred Cresce, KC4MOP; Butch Ickes, WB3HUZ and Paul Courson, WA3VJB, are staffing the new Army Broadcast Service station on 1670 kHz and using the call letters KTRK. The frequency is in the newly expanded Standard Broadcast Band.

Courson, a broadcaster with Dow Jones, says the station began broadcasting around the clock February 5 and so far has received reports from as far away as Colorado. He said he and the other hams were brought in to help specifically because of their AM activity on the amateur bands. The 5000-W transmitter is working into a 140-foot vertical antenna the hams helped set up and tune. KTRK will continue broadcasting from Fort Meade until February 9. Then, the portable station will be packed up for transport to Bosnia, where it will be set up to entertain and inform US troops stationed there.

Reception reports go to the Army Broadcast Service, 601 North Fairfax St, Alexandria, VA 22314. Write DX on the outside of the envelope.

I have seen several recent pleas for information about crystal vendors. I have bought crystal from the following vendors:

Bomar Crystal. 800-526-3935. They now have a $50 minimum order, and unless you have an account with them, don't start on your order until they receive your check. Did not take plastic, last time I asked. But-- Their prices were extremely reasonable.

CTS/Marden. 800-222-6093. Takes credit card. reasonable prices. If you are willing to wait, they can be cheap... Rush orders are more expensive.

ICM/International Crystal. 800-725-1426. Takes credit card. Most expensive of the lot. Good place for those oddball crystals that nobody else can make.

JAN Crystal. 800-JAN-XTAL. Why do they seem unremarkable to me? Not the cheapest, not the most expensive, but 2nd to ICM in price, as I recall.

I used to use Bomar exclusively, but the $50 minimum pissed me off, so I have been buying from CTS/Marden. ICM gets the orders for those strange TCXO crystals, and series resonant oddballs.

>>receiver,

Just fer the record...ICOM didn't just decide to delete the 800-900
MHz coverage from any of their radios. It was our folks in Washington
D.C. who made it illegal to listen to the cellular telephone
frequencies when they modified the Communications Act of 1934.

I believe the cutoff date for the manufacture of equipment openly
capable of receiving cellular freqs is April of 1994.

Just some gee whiz info. :)

Good points, Jim.

I'm not trying to make any case for "code is good" or "code is not good". Just opining that the new entry point (codeless Tech) seems to be a success in that it has introduced many folks to our service who otherwise seemed deterred by Morse. Many of them apparently are increasing their participation as evidenced by the healthy upgrade trends. That is NOT meant to imply that those who haven't upgraded are some sort of "lesser" being. They're all licensed amateurs (ie., "real").

2127. GB2RS News 11th February 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-08 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <823833079snx@llondel.demon.co.uk>
Source record: 230974
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 11th of February and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Following last week's story about the RSGB's response to press coverage of illegal recording of mobile phones, another news item mentioning amateur radio has appeared in some newspapers. This concerns the use of "radio keys", which are used to lock - and in some cases immobilise - vehicles. They work on a Europe-wide allocation of 433.92MHz and some press reports have suggested that amateur radio transmissions have caused the "radio keys" to stop working, resulting in cars having to be towed away.

An RSGB Press Release has been sent to broadcasters and national newspapers This points out that the potential clash could be reduced if the receivers in the "radio key" devices were better designed, but that in any case the frequency allocated to these devices is quite inappropriate.

Next Sunday, the 18th, sees the RSGB's prestigious National VHF Convention which takes place as usual at Sandown Park in Surrey. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show, special interest groups and an RSGB stand. The official show guide can be found in the February edition of Radio Communication. Further details can be obtained from Norman Miller, G3MVV, on 01 277 225563.

The results of last July's RSGB Islands On the Air Contest have been released and will be published in full in the March edition of RadCom. There was a record number of 643 entries received for what has now become the RSGB's most popular contest. The winners of the multi-operator island section were once again the Portuguese DX Group, operating as CS2B from Berlenga Island. Runners-up were "GW5LP Portable", who were operating from Anglesey. The leading UK single operator stations in other sections were:

G3XTT in third place in the mixed mode island section,

G3NKC who led the 12-hour mixed mode island section,

G3NLY in first place in the 12-Hour SSB Island Section,

GM3POI in second place in the 12-Hour CW Island Section,

G3SWH in third place in the CW Island Section

and G0VSN in fourth place in the SSB island section.

The rules for this year's IOTA contest will also be published in the March RadCom, which is due to be posted to all RSGB members on the 19th of February.

RSGB Headquarters at Potters Bar will be open on Saturday, the 17th of February, between 10.00 am and 4.00 pm. The bookshop and GB3RS shack will be available to visitors, as will the National Amateur Radio Museum and Library. Morse tests are also available on demand between 11.00 am and 12.30 pm. Don't forget to bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at RSGB Headquarters.

A new award in memory of Cyril James, G3VVB, and aimed at the home constructor of microwave equipment, will be presented for the first time at the RSGB VHF Convention next Sunday. If you have an item of home-made microwave equipment and you are proud of the way you've constructed it, then bring it along to the Convention and enter it in the competition. The equipment can be constructed from any design, or from a kit - what the judges will be looking for particularly is quality of construction and finish. If you cannot attend the Convention in person, there is still just time for you to send in detailed photographs and a written description of your equipment for judging. Send them to Steve Davies, G4KNZ, whose address is correct in the RSGB Call Book.

John Hallenberg, SM0DJZ, will be activating SJ9WL and LG5LG from Morokulien on the Swedish - Norwegian border from Thursday the 15th until Monday the 19th of February. He'll be active on the WARC bands, RTTY, and the RS-12 satellite as well as participating in the ARRL CW and DARC RTTY contests. John is the custodian of the Morokulien Award and his activity should help award chasers to obtain it.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Vietnam, a Japanese group is planning activity as 3W6YL from Friday the 9th until the 15th of February. Activity will be on all bands, CW, SSB and RTTY, with the emphasis on the low frequency bands to Europe and USA.

From Anguilla, AA4NC will be active as VP2EN from Monday the 12th until the 20th of February, including activity on RTTY especially on 80, 40 and 20 metres. And from Chatham Island - ZL7 - OH2BTB and OH5TB will be active from Friday the 9th until the 16th of February. QSL to their home calls.

Next the Rally News:

The Northern Cross Rally takes place today - Sunday the 11th - at the Thornes Park Athletics Stadium on the A642 Horbury Road in Wakefield. This is a new venue for this rally. The event features the usual dealers, a bookstall and bring-and-buy stand, an RSGB Propagation Studies Committee stand and Morse Tests on demand. Please bring two

passport-size photographs and the appropriate fee with you if you wish to take your Morse test at the rally. Talk-in will be provided on 2 metres channel S22 and 70 centimetres channel SU22.

The Cambridge and District Amateur Radio Club Rally takes place today, Sunday the 11th, at the Ambulance Station at Addenbrookes Hospital. The event features trade stands, a bring and buy stall and car boot sale. Doors open at 10.00am and talk-in will be on 2 metres channel S22.

Now for the HF contest news:

The Dutch PACC Contest is taking place this weekend - from 1200UTC on Saturday the 10th, for 24 hours. It is on both CW and SSB and brief rules can be found on page 22 of the February RadCom.

Next weekend, the 17th and 18th of February, the ARRL International DX Contest takes place for 48 hours starting from 0000UTC on Saturday. Work USA and Canadian stations only on all bands from 160 to 10 metres - excluding the WARC bands - and send an RST report plus your power. USA and Canadian stations will send a report and their state or province. Brief rules can be found on page 22 of the February RadCom.

Next some VHF contest news:

The third session out of five in the RSGB 70 MHz Cumulative Contests takes place today, Sunday the 11th of February, between 10 and 1200UTC. The rules can be found in last September's RadCom.

And now the solar factual data compiled by Neil Clarke, G0CAS:

The period from the 29th of January to the 4th of February saw solar activity at very low levels and the geomagnetic field at quiet levels. Sunspot numbers increased slightly from 12 on the 29th to 26 the following day. They then declined and by the 3rd the solar disc became spotless. The mean for the period was 13. Solar flux levels increased slightly from 74 units on the 29th to peak at 77 on the 31st. Levels then declined back to 74. The average was 75 units. Several small and insignificant solar flares took place on the 31st and the 1st. Electron fluence increased slightly from moderate levels to just above the high level threshold. X-Ray flux increased slightly from A1.0 units to A2.5 units on the 2nd and averaged A1.4 units. The 90-day solar flux average on the 4th was 74 units, the same as last week.

Geomagnetic activity was at quiet levels after it had declined from "unsettled" on the 29th with an Ap index of 16 units. Levels were down to Ap 4 units on the 3rd and the average was Ap 7 units. The aa indices, as supplied by the British Geological Survey for the period from the 23rd to the 29th of January, increased every day - from 10 nanoTeslas on the 23rd, to active levels by the 29th with 39 nanoTeslas. Levels reached 67 nanoTeslas for a time around midday on the 29th. The average for the period was 17.7 nanoTeslas, which is K2.

I'll repeat the figures: spots - 13, flux - 75, Ap - 7, X-Ray flux - A1.4.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies, as reported by Meudon for the period from the 26th of January to the 1st of February, increased slightly from 6.2MHz on the 26th, to 6.9MHz on the 30th. Levels collapsed to only 5.9MHz the following day, but were showing signs of improvement on the 1st. The average was 6.3MHz. The darkness hour lows averaged 2.6MHz and showed little variation, although on the 27th they were up to 3.7MHz. The daytime highs took place between 1200 and 1500 hours every day, with darkness hour lows between 0500 and 0700 hours.

I'll repeat the figures: highs - 6.3MHz, lows - 2.6MHz.

And lastly the solar forecast:

This week the quiet side of the sun is expected to be looking our way and the solar disc could well be spotless on most days. Solar flux levels are expected to be about the 70 mark, but may show signs of a slight rise later in the week. Geomagnetic levels are expected to be unsettled to active today and then decline to quiet levels until the end of the week, then increase again to unsettled levels. Ionospheric MUFs during daylight hours are expected to be about 17MHz for the south and 14MHz for the north. The darkness hour lows are expected to be about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Whisky and G7 Whisky Delta series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Sierra series.

SB SPCL @ ARL $ARLX006
ARLX006 Correction to ARLX005

ZCZC AX52
QST de W1AW
Special Bulletin 6 ARLX006
From ARRL Headquarters
Newington CT February 8, 1996
To all radio amateurs

SB SPCL ARL ARLX006
ARLX006 Correction to ARLX005

A corrected version of ARLX005 follows.

Hams are helping a Bosnia-bound US Army mobile AM radio station at Fort Meade, Maryland, test its broadcasting capabilities. The station, assisted by a group of Amateur Radio AM enthusiasts in the Washington, DC, area, seeks reception reports. Fred Cresce, KC4MOP; Steve Ickes, WB3HUZ, Ken Moffat, N3EAR, and Paul Courson, WA3VJB, are staffing the new Army Broadcast Service station on 1670 kHz, which is identifying itself as ABS Radio and playing music. The frequency is in the newly expanded Standard Broadcast Band.

Courson, a broadcaster with Dow Jones, says the station began broadcasting around the clock February 5 and so far has received reports from as far away as California. He said he and the other hams were brought in to help specifically because of their AM activity on the amateur bands. The 5000-W transmitter is working into a 150-foot vertical antenna the hams helped set up and tune. The station will continue broadcasting from Fort Meade until February 9. Then, the portable station will be packed up for transport to Bosnia, where it will be set up to entertain and inform US troops stationed there.

Reception reports go to the Army Broadcast Service, 601 North Fairfax St, Alexandria, VA 22314. Write DX on the outside of the envelope.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z FEBRUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 08 FEBRUARY AND FORECAST FOR 09 FEBRUARY - 11 FEBRUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 07 Feb
Daily Proton Fluence >1 MeV: 4.3E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 3.9E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Feb 10 Feb 11 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Feb: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 07 Feb
Learmonth 8 2231 2322
Fredericksburg 7 9
Planetary 5 6

Observed Kp for 07 Feb: 2111 2223

2B. MAGNETIC FORECAST
Date Ap Conditions
09 Feb 9 Quiet to unsettled
10 Feb 20 Active
11 Feb 18 Unsettled to active
COMMENT: IPS Geomagnetic Warning 3 was issued on 8 February and
is current for interval 10-11 February.

3A. GLOBAL HF PROPAGATION SUMMARY

: air.

Eric, let's assume you are in a public park, enjoying a sunny picinc with family and friends. Now here come some punks who throw sand in your food, vandalize the rest rooms, and generally make public nuisances of themselves. Would reporting such behavior to the cops "smack of vigilantism," in your opinion? Would such actions on the part of others make you paranoid about using the park?
Cheers...

Vigilantees take the law into their own hands, becoming both Judge
Lynch as well as Constable Pinch. In the main, amateur radio operators
are not vigilantees. Rather, they are good citizens who aren't afraid
to report lawbreakers, something most Americans thought was their civic
duty in years past. Once it shocked America when it was learned that 23
neighbors had heard the screams of Kitty Genovese as she was brutally
murdered on the street, yet not one called the police. Rather, they
cowered behind their curtains. I guess they were afraid they'd be
called vigilantees by someone like you if they reported the crime.

Well, today most Americans cower in their homes, afraid to walk their
streets at night, and to a large extent it is because people like
you don't want them to report crimes, don't want them to get involved
in cleaning up their own communities, don't want them to be good
citizens. Fortunately, there are a few people left who still believe
in the old civic virtues, who believe it is their duty to help keep
their communities clean and strong. Many of them are amateur radio
operators.

Yeah, but it's amusing to see him referred to as an extreme conservative.
Hams have been blasting him as a liberal for years because of his advocacy
for change.

Someone asked about 10m...it's a little quiet now with the sunspot cycle at an 11yr low..but you will hear the various 10m Booster groups, 10-10, 10-10 International and many local rag-chew nets pop up when the sporadic E kicks up. And dont forget to TRY a few cq's! Nominally, 10m is OPEN to someplace! The other traffic which happens (unfortunately) on 10m is the heavy-duty influx of bootleggers, freebanders and jammers floating up from the CB band. I encourage everyone to consider that the manufacturers would just *LOVE* to sell those 10&11m rigs to the CBers on a legal basis, and if we dont start USING 10m more..the FCC might very well consider letting the CBers have it!!

Which reminds me, our 10m Net is sponsoring a St. Valentine's Day BOATANCHOR NITE...here's your chance to drag out that old Johnson, Hammerlund, Collins, Hallicrafters, Globe, Gonset, Eico, Elmac, Tristar, Swan, Metor or even a piece of vintage HOMEBREW gear, put it on the air and enjoy it for a change! ..a chance to hear what the rigs of the Past sound like! AM/SSB/CW/FM-PM or whatever your privs allow. We're hoping for checkins from all over, so please join us!

Thats 2/14/96 at 07:10 UTC, 28.310 (plus or minus the QRM!)

BE THERE!

73! (listen to 28.310 usb at 07:10 UTC everyday for the last/first words on 10m it's the "Ten Again - Late Nite/Early Morning RagChew Net" KA6PVR (Paul) is Net Control - Bring an attitude and your legal callsign. Jammers and bootlegger's auditioned Friday Nites...get on the list! THUNDER OUT OF THE WEST!) And Remember:"If you can't stand 'em, you can't work 'em!"

2149. FT-10R ?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-09 00:00:00 UTC
From: vvv@radio.stack.serpukhov.su
Message-ID: <4fep7a$6o2@ns.serpukhov.su>
Source record: 230796

Hello!

I have buy a new FT-10R. Radio come with the 15hour compact charger BC-60C
and the FNB-41 battery.

In manual I not find enough information how do charging with BC-60 and
how to use external supply for save battery ?

I read (p.62) - remove battery for charging with NC-60.
^^^^ I think it's misprint
and must be read - with NC-50

Can you comment my next opinion:

Charging:

Connect BC-60 to EXT DC jack on radio. IMHO I must do charging battery when
radio is _turn-off_only_ ?

Operation with external (5-12V, 1.5A) power supply:

Remove battery, connect external power supply jack to EXT DC on Radio.
But it's not very comfortable to use radio with open back site..?
If necessary to remove battery for operate with external power supply,
why I not find in an accsessories list a cover for close a back site of radio ?

If possibly to use external supply and do not remove battery, then DC come on
battery, that IMHO is not good.

I'll be thankful for any information. 73! de RX3DIN Victor

2150. 10 METERS - calling freq (NY) ???

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-09 00:00:00 UTC
From: jwg6@cornell.edu
Message-ID: <jwg6-0902962040210001@cu-dialup-0906.cit.cornell.edu>
Source record: 230797

Is there a 10 meter ssb calling frequency, at least in NY or the northeastern states? I am interested in drumming up QSO's when the band appears closed and also I'm looking for ground-wave/tropo, mostly evenings. The band is so wide I'm not sure where to call CQ. I did finally make a contact today to the next grid-square and that was on 28.400. I had been calling on 28.325 where I sometimes hear very faint ground-wave SSB at night, but so far the stations haven't ever been strong enough to ID or call. Perhaps hams into 10-X group or whatever know of accepted 10m calling frequencies such as are found on 6m and 2m???

Also anyone know the location/power of the CW beacon at 28.195 in FN12 ??
Thanks N1AEP

2151. FOR SALE -- SHURE 450 DESK MIC

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-09 00:00:00 UTC

SHURE MODEL 450 desk mic

Good, working condition with some scratches.

The 450 was selling new in a 1993 Newark Electronics catalog
for approx $112.

$35 C.O.D. POSTPAID (or offer?)

Hi Rob, four 200 ohm 2 watt carbon resistors in parallel sounds just right.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 09/2330Z FEBRUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 09 FEBRUARY AND FORECAST FOR 10 FEBRUARY - 12 FEBRUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 08 Feb
Daily Proton Fluence >1 MeV: 9.4E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 3.1E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
10 Feb 11 Feb 12 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 10 Feb: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly quiet, with an unsettled period
00-03UT.

Estimated Indices : A K Observed A Index 08 Feb
Learmonth 7 3222 2122
Fredericksburg 8 7
Planetary 5 4

Observed Kp for 08 Feb: 1101 1212

2B. MAGNETIC FORECAST
Date Ap Conditions
10 Feb 20 Active
11 Feb 18 Unsettled to active
12 Feb 10 Unsettled
COMMENT: IPS Geomagnetic Warning 3 was issued on 8 February and
is current for interval 10-11 February.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
09 Feb Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
10 Feb Normal Normal Normal-fair
11 Feb Normal-fair Normal-fair Fair-poor
12 Feb Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
09 Feb 17

Observed Australian Regional MUFs:
Townsville: Near predicted monthly values,apart from 15-30%
enhancement 04-08UT.
Sydney: Near predicted monthly values, with spread F
observed 12-19UT.
Hobart: Near predicted monthly values.
Darwin: Near predicted monthly values, apart from 15-30%
enhancement 04-07UT.

Predicted Monthly T index for February: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
10 Feb 0 near predicted monthly values/depressed 10 to
15%
11 Feb -10 depressed 10 to 15%/near predicted monthly values
12 Feb 0 near predicted monthly values

> N1UST

Why bother the FCC? They're understaffed and busy enough as it is.
As a radio amateur, you're supposed to have a current copy of Part
97 at your station. Just look it up yourself. The section is 97.115.
It says that the control operator must be present at the control
point and continously monitoring the communications, but that the
third party can do the talking.

And by the way, hams don't have call signs, their *stations* have
call signs. As long as the third party is operating the *station*
(under the control operator's supervision of course), the third
party can give the *station's* call sign. 97.5 sets forth what
constitutes a station license, which includes a call sign, and
part 97.9 sets forth what constitutes an operator license, which
does *not* include a call sign, just a Class.

Most, but not all, amateur station licenses are issued on the same
piece of paper as the operator license of the station licensee (Form
660), so many hams have the mistaken impression that the call sign
identifies *them* as amateur operators. Technically it does not. It
identifies an amateur radio *station* for which they are the licensee.

It's much clearer in commercial services. I have a General Radiotelephone
operator's license which allows me to, among other things, operate a
broadcast station, but it has no associated call sign. That's a separate
document licensing a particular *station* to a station licensee (who might
not have an operator's license), and the station *does* have an associated
call sign.

The same is true in amateur radio, but usually only one document combines
both licenses since the station licensee is usually also the station operator.
